SMS 2003 Recipes Greg Ramsey, Warren Byle, 2007-02-01 SMS 2003 Networking Recipes provides hundreds of quick-reference solutions for the Windows administrator. The book addresses a wide range of problems that all levels of SMS administrators have reported to our authors in the course of their real-world jobs. Some are simple, beginning implementation solutions, while others address high-end automation techniques. The recipes in this book were not selected whimsically, nor on the basis of what the authors found cool or interesting, but rather on the frequency and importance of complaints experienced by the authors in practical business environments.

Pro SMS 2003 Rod Kruetzfeld, 2007-02-01 Microsoft's Systems Management Server (SMS) allows network administrators to provide software updates to users quickly and cost-effectively from a single machine. The administrator can update every user in a network at once, or choose a group of individuals – even a single user. All this can be accomplished from the administrator's computer: no need to visit everyone's computer to make changes, as in days of old. The SMS 2003 Field Guide addresses real-world problems and solutions, based on the broad consulting experience of the author. He knows where network administrators are liable to make mistakes, and offers help at their level.

SMS Communication Louise-Amélie Cougnon,Cédrick Fairon,2014-07-15 The media often point an accusatory finger at new technologies; they suggest that there is always a loss of information or quality, or even that computer-mediated communication is destroying language. Most linguists, on the contrary, are firmly convinced that it is better to consider language as an evolving and changing entity. From this point of view, language is a social tool that has to be studied in-depth through the prism of objectivity, as a process in motion which is influenced by new social and technological stakes, rather than as a fading organism. In this volume we study and describe the societal phenomenon of SMS writing in its full complexity. The aim of this volume is threefold: to present recent linguistic research in the field of SMS communication; to inform the reader about existing large SMS corpora and processing tools and, finally, to display the many linguistic aspects that can be studied via a corpus of text messages. These articles were previously published in Lingvisticae Investigationes Vol. 35:2 (2012).
