The Pathways of Mind Roland Kalb, 2011-06-28 The investigation of the cortical structure of stimulus-response pathways is the central subject of this book. The investigation comprises measurement of reaction times and recording of event-related potentials, the computer assisted evaluation of these empirical data and the mathematical description of these pathways. The investigation is completed by a hypothetical neural interpretation and a comparison of the pathways of healthy subjects, patients with brain tumors, and patients with schizophrenia. The author has chosen a completely new approach by describing the structure of the stimulus-response pathways by mathematical equations and by presenting a hypothetical neural interpretation of this structure, and by simulating these pathways in computer programs. This volume presents a neural theory of simple mental processes like stimulus-response sequences. Knowing the neural correlate of decision making would have far reaching consequences for the neurosciences. The readers will benefit from new insights into the physical substrate of mental processes.

What kind of information do your customers need and in what formats? . Who needs to be involved in your plans? . Budgeting for your e-information service . Keeping in touch with your customers . Keeping one step ahead of your competitors. Also includes an illustrated glossary of sample electronic services and a list of further information sources. Regardless of the type or size of your organization, this reference will help broaden your horizons, as well as those of your users.

Make More Money, Find More Clients, Close Deals Faster Claude Boiron, 2013-03-20 Everything you need to know to succeed in the real estate business, as an agent, broker, or seller *Make More Money, Find More Clients, Close Deals Faster* illustrates why and how real estate agents need to change the way they do business to better serve their clients, spend resources more wisely, and make more money. The real estate industry is notorious for eating up a real estate agent's time, energy, and money, but many of the inefficiencies are of their own making. As a result, the client suffers from poor and uninformed service. This book provides a new business model for agents that shows how to sell more property, in less time, and develop client relationships that will continue over time, as well as a model for the broker, who can increase the brokerage's revenues through the use of professional development strategies from the book. Shows brokers how to provide better customer service, improve profits and return on investment, and take full advantage of social networking to advertise and attract new clients Written by Claude Boiron, coauthor of *Commercial Real Estate Investing in Canada* One of the few guides to the subject written particularly for the Canadian real estate market *Make More Money, Find More Clients, Close Deals Faster* is of value to real estate boards educating new members, academics, as well as agents, brokers, and sellers themselves.

Advances in Digital Forensics XII Gilbert Peterson, Sujeet Sheno, 2016-09-19 Digital forensics deals with the acquisition, preservation, examination, analysis and presentation of electronic evidence. Networked computing, wireless communications and portable electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations. Practically every crime now involves some aspect of digital evidence; digital forensics provides the techniques and tools to articulate this evidence. Digital forensics also has myriad intelligence applications. Furthermore, it has a vital role in information assurance -- investigations of security breaches yield valuable information that can be used to design more secure systems. Advances in Digital Forensics XII describes original research results and innovative applications in the discipline of digital forensics. In addition, it highlights some of the major technical and legal issues related to digital evidence and electronic crime investigations. The areas of coverage include: Themes and Issues, Mobile Device Forensics, Network Forensics, Cloud Forensics, Social Media Forensics, Image Forensics, Forensic Techniques, and Forensic Tools. This book is the twelfth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.9 on Digital Forensics, an international community of scientists, engineers and practitioners dedicated to advancing the state of the art of research and practice in digital forensics. The book contains a selection of twenty edited papers from the Twelfth Annual IFIP WG 11.9 International Conference on Digital Forensics, held in New Delhi, India in the winter of 2016. Advances in Digital Forensics XII is an important resource for researchers, faculty members and graduate students, as well as for practitioners and individuals engaged in research and development efforts for the law enforcement and intelligence communities. Gilbert Peterson, Chair, IFIP WG 11.9 on Digital Forensics, is a Professor of Computer Engineering at the Air Force Institute of Technology, Wright-Patterson Air Force Base, Ohio, USA. Sujeet Sheno is the F.P. Walter Professor of Computer Science and a Professor of Chemical Engineering at the University of Tulsa, Tulsa, Oklahoma, USA.

EVOLVE - A Bridge between Probability, Set Oriented Numerics, and Evolutionary Computation IV Michael Emmerich, Andre Deutz, Oliver Schuetze, Thomas Bäck, Emilia Tantar, Alexandru-Adrian Tantar, Del Moral. P, Pierrick Legrand, Pascal Bouvry, Carlos A. Coello, 2013-06-12 Numerical and computational methods are nowadays used in a wide range of contexts in complex systems research, biology, physics, and engineering. Over the last decades different methodological schools have emerged with emphasis on different aspects of computation, such as nature-inspired algorithms, set oriented numerics, probabilistic systems and Monte Carlo methods. Due to the use of different terminologies and emphasis on different aspects of algorithmic performance there is a strong need for a more integrated view and opportunities for cross-fertilization across particular disciplines. These proceedings feature 20 original publications from distinguished authors in the cross-section of computational sciences, such as machine learning algorithms and probabilistic models, complex networks and fitness landscape analysis, set oriented numerics and cell mapping, evolutionary multiobjective optimization, diversity-oriented search, and the foundations of genetic programming algorithms. By presenting cutting edge results with a strong focus on foundations and integration aspects this work presents a stepping stone towards efficient, reliable, and well-analyzed methods for complex systems management and analysis.
