ABCs of z/OS System Programming Paul Rogers,Juha Vainikainen,IBM Redbooks,2012-02-07 A major goal of operating systems is to process jobs while making the best use of system resources. Thus, one way of viewing operating systems is as resource managers. Before job processing, operating systems reserve input and output resources for jobs. During job processing, operating systems manage resources such as processors and storage. After job processing, operating systems free all resources used by the completed jobs, making the resources available to other jobs. This process is called resource management. There is more to the processing of jobs than the managing of resources needed by the jobs. At any instant, a number of jobs can be in various stages of preparation, processing,

and post-processing activity. To use resources efficiently, operating systems divide jobs into parts. They distribute the parts of jobs to queues to wait for needed resources. Keeping track of where things are and routing work from queue to queue is called workflow management, and is a major function of any operating system. JES3 considers job priorities, device and processor alternatives, and installation-specified preferences in preparing jobs for processing job output. This IBM® Redbooks® publication describes a JES3 environment that includes the following: - Single-system image - Workload balancing - Availability - Control flexibility - Physical planning flexibility.

Creating Location Services for the Wireless Web Johan Hjelm, 2003-05-27 The first guide to developing user location applications You are walking down a street and suddenly, your cell phone display flashes the news that you are 70 feet from a Starbuck's and that you are entitled to a dollar off your next purchase. You have just witnessed an example of user location services, one of the exciting new generations of cell phone and handheld services. This book describes the architecture and operation of this technology. It also familiarizes readers with the new location services development standard, shows how to programming with GIS, provides GUI design guidelines, and uses real-world examples to teach valuable lessons on how to successfully develop and deploy user location applications for the wireless Web. Parlay / OSA Musa Unmehopa, Kumar Vemuri, Andy Bennett, 2006-08-04 Parlay will enable rapid and cost-effective delivery of services based on telecommunications networks, and will be an essential part of the 3G future. We live in an exciting time. 3G networks are taking off, and as greater bandwidth and communication speeds become available, people are seeking new means by which to increase their interaction potential. Newer and more exciting services are being developed to drive more revenues and to enhance end-user experiences. New technologies are being designed and implemented to supplement and leverage the new capabilities being built into core networks. Parlay/OSA: From Standards to Reality is an accessible primer on network ecosystems and operations today, discussing the need for Parlay, the details of standards, aspects of network evolution and support for legacy systems, and advanced topics from an implementation perspective. The authors examine the potential of the Parlay/OSA (Open Service Access) solution from a number of points of view: business need, service

development and service deployment. Parlay/OSA: From Standards to Reality: Provides a comprehensive account and examination of the Parlay technology. Covers standards capabilities and directions, and the twelve Service Capability Features, including call control, mobility management, data session control, generic messaging service and content based charging and policy management. Addresses architectural alternatives and advanced architecture patterns. Provides use cases, architecture, deployment scenarios and advanced topics for further reading. This invaluable resource will provide product managers, software developers, application developers, network architects and engineers, as well as advanced students and researchers in academia and industry with an in-depth understanding of Parlay.

They were organized in topical sections named: Applied Cryptography, Security in Internet of Things, Machine Learning and Security, Network Security, and Trust.

Integrating Psychoinformatics with Ubiquitous Social Networking Felix Beierle, 2021-04-23 This book deepens the understanding of people through smartphone data obtained via mobile sensing and applies psychological insights for social networking applications. The author first introduces TYDR, an application for researching smartphone data and user personality. A novel, structured privacy model for mobile sensing applications is developed and the obtained empirical results help researchers gauge

what data they can expect users to share in daily-life studies. The new research findings, the concept of mobile sensing, and psychological insights about the formation and structure of real-life social networks are integrated into the field of social networking. Finally, for this novel integration, the author presents concepts, decentralized software architectures, and fully realized prototypes that recommend new contacts, media, and locations to individual users and groups of users.

EU Electronic Communications Code Handbook

Francesco Liberatore, James Konidaris, 2021-07-30
Regulation of electronic communications in the EU Member States is increasingly driven by European legislation. This title collects the key European legislation and other instruments pertinent to the electronic communications sector and in some cases is annotated by Francesco Liberatore and his colleagues at global law firm, Squire Patton Boggs. The timing of this title is particularly opportune as it includes: - The new EU Electronic Communications Code Directive - The Commission's Guidelines on market analysis and its recommendation on relevant markets - Significant measures (other Directives, Commission decisions and recommendations) integral to the regulatory framework - The BEREC Common Position on Remedies and other BEREC texts

Programming MapPoint in .NET Chandu

Thota, 2005-12-09 Interactive web maps generated by MapPoint-Microsoft's popular mapping technology are crucial for businesses in a number of fields, including real estate, package delivery, and commercial air travel. In a word, MapPoint provides businesses with location. Specifically, it provides an integrated set of products, servers, and services to enable a business to track the precise location of remote assets, thereby reducing operational costs and improving productivity. Whether the asset is a truck, a taxi, or even a field rep, MapPoint can tell you exactly where it is at any time. Programming MapPoint in .NET from O'Reilly shows you how to use MapPoint to build custom applications for the desktop, the web, and mobile devices. The book also explains how to analyze and share data generated from a wide range of maps, including those that show demographic trends, population density, and sales potential. Chandu Thota, one of Microsoft's main MapPoint developers and the book's author, has organized the material into four major sections, each dedicated to a different MapPoint technology: MapPoint 2004 - calculating routes, rendering data maps, integrating with Global Positioning System (GPS) for obtaining real-time location MapPoint Web Service -

techniques for finding points of interest, creating applications using the Find APIs and Route APIs, rendering LineDrive maps and polygons MapPoint Location Server - deployment scenarios, getting real-time location using mobile phones, managing contacts and privacy settings MSN Virtual Earth - the basics of programming with new MSN Virtual Earth APIs The book provides a jumpstart for working with these technologies, including in-depth discussions about the core concepts and sample code provided in C#. It's ideal for anyone who wants to develop locations-based applications with MapPoint technologies. The next time you follow online directions to the airport, you can chalk up an assist to MapPoint's state-of-the-art interactive mapping abilities. Better yet, you'll know how to create that same type of map yourself.

The Violence Against Woman [sic] Act United States. Congress. Senate. Committee on the Judiciary, 2011

Location and Personalisation Daniel Ralph, Stephen Searby, 2004 The world is charging towards the new network technologies of broadband and 3G, and new application technologies face the challenge of where they can be used. This book takes a pragmatic look at two particular application technologies - location and personalisation - and presents an understanding of the technical and business impact of these technologies. With a combination of overview papers, detailed technical case studies and a deep understanding of actual implementation of these services within a telecommunications environment, this book will help those wishing to deliver improved services based on these capabilities. Other key topics covered include CRM and content management.
