Spying Software Development in Google Android Fissha Seyoum Teshome, 2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences, language: English, abstract: The main purpose was to study the concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

Gender, Technology and Violence Marie Segrave, Laura Vitis, 2017-06-26 Technological developments move at lightening pace and can bring with them new possibilities for social harm. This book brings together original empirical and theoretical work examining how digital technologies both create and sustain various forms of gendered violence and provide platforms for resistance and criminal justice intervention. This edited collection is organised around two key themes of facilitation and resistance, with an emphasis through the whole collection on the development of a gendered interrogation of contemporary practices of technologically-enabled or enhanced practices of violence. Addressing a broad range of criminological issues such as intimate partner violence, rape and sexual assault, online sexual harassment, gendered political violence, online culture, cyberbullying, and human trafficking, and including a critical examination of the broader issue of feminist 'diligantism' and resistance to online sexual harassment, this book examines the ways in which new and emerging technologies facilitate new platforms for gendered violence as well as offering both formal and informal opportunities to prevent and/or respond to gendered violence.
