Grant Wood R. Tripp Evans, 2010-10-05 He claimed to be “the plainest kind of fellow you can find. There isn’t a single thing I’ve done, or experienced,” said Grant Wood, “that’s been even the least bit exciting.” Wood was one of America’s most famous regionalist painters; to love his work was the equivalent of loving America itself. In his time, he was an “almost mythical figure,” recognized most supremely for his hard-boiled farm scene, *American Gothic*, a painting that has come to reflect the essence of America’s traditional values—a simple, decent, homespun tribute to our lost agrarian age. In this major new biography of America’s most acclaimed, and misunderstood, regionalist painter, Grant Wood is revealed to have been anything but plain, or simple . . . R. Tripp Evans reveals the true complexity of the man and the image Wood so carefully constructed of himself. Grant Wood called himself a farmer-painter but farming held little interest for him. He appeared to be a self-taught painter with his scenes of farmlands, farm workers, and folklore but he was classically trained, a sophisticated artist who had studied the Old Masters and Flemish art as well as impressionism. He lived a bohemian life and painted in Paris and Munich in the 1920s, fleeing what H. L. Mencken referred to as “the booboisie” of small-town America. We see Wood as an artist haunted and inspired by the images of childhood; by the complex relationship with his father (stern, pious, the “manliest of men”); with his sister and his beloved mother (Wood shared his studio and sleeping quarters with his mother until her death at seventy-seven; he was forty-four). We see Wood’s homosexuality and how his studied masculinity was a ruse that shaped his work. Here is Wood’s life and work explored more deeply and insightfully than ever before. Drawing on letters, the artist’s unfinished autobiography, his sister’s writings, and many never-before-seen documents, Evans’s book is a dimensional portrait of a deeply complicated artist who became a “National Symbol.” It is as well a portrait of the American art scene at a time when America’s Calvinistic spirit and provincialism saw Europe as decadent and artists were divided between red-blooded patriotic men and “hothouse aesthetes.” Thomas Hart Benton said of Grant Wood: “When this new America looks back for landmarks to help gauge its forward footsteps, it will find a monument standing up in the midst of the wreckage . . . This monument will be made out of Grant Wood’s works.”

The Downy Mildews - Genetics, Molecular Biology and Control Aleš Lebeda, Peter T. N. Spencer-Phillips, B. Michael Cooke, 2009-01-23 Knowledge of downy mildew pathogens and diseases has increased significantly in taxonomy, phylogeny, genetics, molecular biology, host-parasite interactions, ecology, epidemiology and control. The opportunity to update comprehensively the major advances in these areas was created by the 2nd International Symposium on Downy Mildews held in July 2007 at Olomouc (Czech Republic). Keynote contributions from this meeting are published here in 14 chapters that provide the most authoritative and recent analysis of these biotrophic plant pathogens and their interactions with plants. It will be an invaluable resource to students and researchers in plant pathology, mycology, taxonomy, plant biology and crop protection.

Plant Virology Roger Hull,2001-10-03 It has been ten years since the publication of the third edition of this seminal text on plant virology, during which there has been an explosion of conceptual and factual advances. The fourth edition updates and revises many details of the previous edition, while retaining the important older results that constitute the field's conceptual foundation. Key features of the fourth edition include: * Thumbnail sketches of each genera and family groups * Genome maps of all genera for which they are known * Genetic engineered resistance strategies for virus disease control * Latest understanding of virus interactions with plants, including gene silencing * Interactions between viruses and insect, fungal, and nematode vectors * New plate section containing over 50 full-color illustrations

Privacy Is Hard and Seven Other Myths Jaap-Henk Hoepman,2023-10-03 An expert on computer privacy and security shows how we can build privacy into the design of systems from the start. We are tethered to our devices all day, every day, leaving data trails of our searches, posts, clicks, and communications. Meanwhile, governments and businesses collect our data and use it to monitor us without our knowledge. So we have resigned ourselves to the belief that privacy is hard--choosing to believe that websites do not share our information, for example, and declaring that we have nothing to hide anyway. In this informative and illuminating book, a computer privacy and security expert argues that privacy is not that hard if we build it into the design of systems from the start. Along the way, Jaap-Henk Hoepman debunks eight persistent myths surrounding computer privacy. The website that claims it doesn't collect personal data, for example; Hoepman explains that most data is personal, capturing location, preferences, and other information. You don't have anything to hide? There's nothing wrong with wanting to keep personal information--even if it's not incriminating or embarrassing--private. Hoepman shows that just as technology can be used to invade our privacy, it can be used to protect it, when we apply privacy by design. Hoepman suggests technical fixes, discussing pseudonyms, leaky design, encryption, metadata, and the benefits of keeping your data local (on your own device only), and outlines privacy design strategies that system designers can apply now.

Handbook of Triboelectric Nanogenerators Zhong Lin Wang,Ya Yang,Junyi Zhai,Jie Wang,2023-09-26 This handbook comprehensively covers the rapidly evolving field of power generation using triboelectric nanogenerators. Since their emergence in 2012, triboelectric nanogenerators have experienced fast development both in fundamental science aspects and technological innovations resulting in a plethora of outstanding applications and commercial opportunities in e.g. micro-nano energy systems, self-powered sensors, blue energy, and high-voltage power sources. The Handbook of Triboelectric Nanogenerators provides an indispensable overview of the state of the art in the field. It begins with a review of the physical and technological fundamentals and provides detailed coverage of triboelectric nanogenerators for cutting-edge applications from wearable electronics and medical implants to smart home sensing devices and human-machine interfacing. Edited and authored by active researchers in the field, the handbook offers a wealth of information for applied physicists and chemists, as well as materials scientists and engineers. In addition, mechanical and electronic engineers working in the fields of energy scavenging, power sources, and sensor-related application development will benefit greatly from the technical information presented in this groundbreaking reference work.

Stability of Functional Equations in Banach Algebras Yeol Je Cho,Choonkil Park,Themistocles M. Rassias,Reza Saadati,2015-06-26 Some of the most recent and significant results on homomorphisms and derivations in Banach algebras, quasi-Banach algebras, C*-algebras, C*-ternary algebras, non-Archimedean Banach algebras and multi-normed algebras are presented in this book. A brief introduction for functional equations and their stability is provided with historical remarks. Since the homomorphisms and derivations in Banach algebras are additive and R-linear or C-linear, the stability problems for additive functional equations and additive mappings are studied in detail. The latest results are discussed and examined in

stability theory for new functional equations and functional inequalities in Banach algebras and C*-algebras, non-Archimedean Banach algebras, non-Archimedean C*-algebras, multi-Banach algebras and multi-C*-algebras. Graduate students with an understanding of operator theory, functional analysis, functional equations and analytic inequalities will find this book useful for furthering their understanding and discovering the latest results in mathematical analysis. Moreover, research mathematicians, physicists and engineers will benefit from the variety of old and new results, as well as theories and methods presented in this book.

Global health issues of aflatoxins in food and agriculture: Challenges and opportunities Mehdi Razzaghi-Abyaneh, Perng-Kuang Chang, Masoom Shams-Ghahfarokhi, Mahendra Rai, 2015-06-18 Aflatoxins are a group of polyketide mycotoxins that are produced mainly by members of the genus *Aspergillus*. Production of these toxic secondary metabolites is closely related to fungal development (Keller et al., 2005; Jamali et al., 2012). Contamination of food, feed and agricultural commodities by aflatoxins poses enormous economic and serious health concerns because these chemicals are highly carcinogenic and can directly influence the structure of DNA. The resulting genetic defects can lead to fetal misdevelopment and miscarriages; aflatoxins are also known to suppress immune systems (Razzaghi-Abyaneh et al., 2013). In a global context, aflatoxin contamination is a constant concern between the 35N and 35S latitude where developing countries are mainly situated. With expanding boundaries of developing countries, aflatoxin contamination has become a persistent problem to those emerging areas (Shams-Ghahfarokhi et al., 2013). The continuing threat by aflatoxin contamination of food, feed and agricultural commodities to the world population has made aflatoxin research one of the most exciting and rapidly developing study areas of microbial toxins. The present research topic includes six review articles, three mini reviews and four original research articles. Contributors highlight current global health issues arising from aflatoxins and aflatoxigenic fungi and cover important aspects of aflatoxin research including contamination of crops, epidemiology, molecular biology and management strategies. Special attention is given to fungus-plant host interactions, biodiversity and biocontrol, sexual recombination in aflatoxigenic *aspergilli*, potential biomarkers for aflatoxin exposure in humans and safe storage programs.

Parallels between plant and animal host defense systems is a major theme. Historical topics of interest that continue to draw attention include: growth hormones, fungal and bacterial toxins, the avirulent gene concept, pathogen elicitors and hypersensitive responses, and the avirulence and harpin molecules. A new seminar focus is Hrp delivery system and apoptosis. Keen is at the U. of California, Riverside. Lacks an index. Annotation copyrighted by Book News, Inc., Portland, OR.
