Tracey West

"atpl basics" Alkis Makris,2018-02-01 This textbook is addressed to qualified pilots intending to get employed to an airline company. It is based on feedback concerning practices used by airliners for screening pilots (assessment). Candidate should have a limited time for preparation. So efforts have been made to compress the script in a way to provide neither a plain, raw definition of topics nor a stretched, full theoretical analysis. As such reader avoids coming into unclear mixed-up understanding of the words and gets exactly what is needed.

Airline Transport Pilot: Complete Note Collection Carsten Borgen,2020-07-20 This book is written as a quick reference guide to pilots and aviation enthusiasts, in an effort to simplify the process of staying current on, revising and learning aviation related subjects. In its sixth edition, The ATP book is a culmination of more than 10 years of research and writing. More than a thousand pilots around the world are already benefiting from this book. As you go through the book, whether it is simply to refresh a single or specific subject or it is to review the entire ATPL syllabus, you will find the book structured to give you maximum information using as few words as possible. The book uses key facts and bullet points to refresh your knowledge or add to it. Maximum number of pictures, tables, formulas and graphs are used as they contain vast amounts of information. This e-version is an electronic version of the printed book. This PDF-like version allows smooth flow in both portrait and landscape view. Pages are fully adaptable to all devices such as phones, tablets and laptop computers. Although this version does not contain; 3D models, animations, real-life videos & audio and interactive pictures, like the the IOS version, this book does contain the exact same information. Within a couple of hours, a complete subject matter can be covered. The book is based on EASA ATPL theory and all information is purely factual. A minimum of 3 separate sources have

been used to verify and substantiate any information provided. All information in this book is an interpretation of the subject matter researched from multiple ATPL publications and combined with personal experience and inputs from aviation professionals.

Air Traffic Control: Human Performance Factors Anne R. Isaac, Bert Ruitenbergh, 2017-03-02

From the Foreword by Captain Daniel Maurino, ICAO: '...Air Traffic Control...will remain a technology-intensive system. People (controllers) must harmoniously interact with technology to contribute to achieve the aviation system's goals of safe and efficient transportation of passengers and cargo...This book...considers human error and human factors from a contemporary and operational perspective and discusses the parts as well as the whole...I hope you enjoy reading it as much as I did.' The motivation for writing this book comes from the author's long standing belief that the needs of Air Traffic Service personnel are inadequately represented in the aviation literature. There are few references to air traffic control in many of the books written for pilots and about pilots and this is also observed at the main international conferences. In line with the ICAO syllabus for human factors training for air traffic controllers, the book covers the main issues in air traffic control, with regard to human performance: physiology including stress, fatigue and shift work problems; psychology with emphasis on human error and its management, social psychology including issues of communication and working in teams, the environment including ergonomic principles and working with new technologies and hardware and software issues including the development of documentation and procedures and a study of the changes brought about by advanced technologies. Throughout the text there are actual examples taken from the air traffic control environment to illustrate the issues discussed. A full bibliography is included for those who want to read beyond these issues. It has been written for all in air traffic services, from ab initio to

the boardroom; it is important that the men and women in senior management positions have some knowledge and awareness of the fundamental problems that limit and enhance human performance.
