Social Attitudes in Contemporary China Chen Yu, Fang Wei, Liqing Li, Paul Morrissey, Nie Chen, 2016-02-12 Unlike many studies of social attitudes, which are based on large scale quantitative surveys, or which focus on the attitude of elites, this book considers the views of ordinary people, and is based on in-depth, qualitative interviews. This approach results in rich, nuanced data, and is especially helpful for highlighting ambivalent attitudes, where respondents may hold positive and negative views on a particular topic, views which are liable to change. The book examines attitudes on a range of subjects of current importance, including views on nationalism and internationalism,

housing preferences, and educational ambitions. Throughout, the book explores how far attitudes are influenced by traditional Chinese values or by the neo-liberal outlook fostered by recent reforms, and concludes that materialism and individualism have increased.

Value Rational Engineering Shuichi Fukuda, 2018-08-21 Early in the 20th century, our world was small and closed with boundaries. And, there were no appreciable changes. Therefore, we could foresee the future. These days, however, we could apply mathematical rationality and solve problems without any difficulty. As our world began to expand rapidly and boundaries disappeared, the problem of bounded rationality emerged. Engineers put forth tremendous effort to overcome this difficulty and succeeded in expanding the bounds of mathematical rationality, thereby establishing the Controllable World. However, our world continues to expand. Therefore such an approach can no longer be applied. We have no other choice than satisficing (Herbert A. Simon's word, Satisfy + Suffice). This expanding open world brought us frequent and extensive changes which are unpredictable and diversification and personalization of customer expectations. To cope with these situations, we need diverse knowledge and experience. Thus, to satisfy our customers, we need teamwork. These changes of environments and situations transformed the meaning of value. It used to mean excellent functions and exact reproducibility. Now, it means how good and flexible we can be to adapt to the situations. Thus, adaptability is the value today. Although these changes were big, and we needed to re-define value, a greater shift in engineering is now emerging. The Internet of Things (IoT) brought us the Connected Society, where things are connected. Things include not only

products, but also humans. As changes are so frequent and extensive, only users know what is happening right now. Thus, the user in this Connected Society needs to be a playing manager—he or she should manage to control the product-human team on the pitch. Moreover, this Connected Society will bring us another big shift in engineering. Engineering in this framework will become Social Networking, with engineering no longer developing individual products and managing team products. The Internet works two ways between the sender and the receiver. Our engineering has ever been only one way. Thus, how we establish a social networking framework for engineering is a big challenge facing us today. This will change our engineering. Engineers are expected to develop not only products, but also such dream society. This book discusses these issues and points out that New Horizons are emerging before us. It is hoped that this book helps readers explore and establish their own New Worlds.
