Modeling and Managing Interdependent Complex Systems of Systems Yacov Y.

Haim, 2018-10-02 A comprehensive guide to the theory, methodology, and development for modeling systems of systems Modeling and Managing Interdependent Complex Systems of Systems examines the complexity of, and the risk to, emergent interconnected and interdependent complex systems of systems in the natural and the constructed environment, and in its critical infrastructures. For systems modelers, this book focuses on what constitutes complexity and how to understand, model and manage it. Previous modeling methods for complex systems of systems were aimed at developing theory and methodologies for uncoupling the interdependencies and interconnections that characterize them. In this book, the author extends the above by utilizing public- and private- sector case studies; identifies, explores, and exploits the core of interdependencies; and seeks to understand their essence via the states of the system, and their dominant contributions to the complexity of systems of systems. The book proposes a reevaluation of fundamental and practical systems engineering and risk analysis concepts on complex systems of systems developed over the past 40 years. This important resource: Updates and streamlines systems engineering theory, methodology, and practice as applied to complex systems of systems Introduces modeling methodology inspired by philosophical and conceptual thinking from the arts and sciences Models the complexity of emergent interdependent and interconnected complex systems of systems by analyzing their shared states, decisions, resources, and decisionmakers Written for systems engineers, industrial engineers, managers, planners, academics and other professionals in engineering systems and the environment, this text is the resource for understanding the fundamental principles of modeling and managing complex systems of systems, and the risk thereto.

Monitoring for Outcomes in Community Driven Projects Ashis Mondal,Soma Dutta,2007

Community-Driven Development (CDD) in World Bank parlance refers to an approach that gives communities direct control over key project decisions as well as responsibility for management of investment funds. Because poor people are included as partners in decision-making and are learning as they go, the guide explains, continuous evaluation of programs is much more effective than traditional input-output-outcome reporting mechanisms. Copublished by the World Bank, this guide provides directors of such programs with lessons on monitoring and evaluation (M&E) as a management tool.

Solving Algebraic Computational Problems in Geodesy and Geoinformatics Joseph L. Awange, Erik W. Grafarend, 2005 Charity Mupanga, the resilient and maternal proprietor of Harrods International Bar (and Nightspot) faces her toughest challenge in *Dizzy Worms*, the final novel in Michael Holman's acclaimed trilogy set in the African slum of Kireba. Faced with a Health and Safety closure, Charity has a week to appeal and the chances of success seem negligible: elections are imminent, and Kireba is due to become a showcase of President Josiah Nduka's 'slum rehabilitation program', backed by gullible foreign donors. But before taking on Nduka and the council, she has a promise to keep - to provide a supply of her famous sweet doughballs to a small army of street children, as voracious as they are malodorous . . . Michael Holman uses his witty satirical pen to brilliant effect in this affectionate portrait of a troubled region, targeting local politicians, western diplomats, foreign donors and journalists, puncturing pretensions and questioning the philosophy of aid.

The Return of the Horsemen Mark Roddy, 2024-01-22 The phone call was short - a complaint from Mark Webley - a freshman at St. Mary's college in Maryland - reporting that every Thursday night he was picking up a coded message in morse code - that was being repeated verbatim all the way around the world by other ham radio operators. The situation is addressed at the next executive

meeting at the Carlisle War College in Pennsylvania. A decision is made that it 'wouldn't hurt' to set up an informal ROTC program at various schools to explore the possibility that other 'unfriendly' nations might still be using primitive forms of communication against the United States. The situation explodes when Mark Webley - now an exchange student at the University of Gibraltar, intercepts communications that accurately describe the movement of US submarines in and out of the Mediterranean. On this surface, this novel is a love story between Mark Webley and Maria Blasini, as they work their way through the maze trying to get to the end in one piece, and return to college where they belong. On a second level, it is a high action drama involving patriotism, loyalty, love, trust, and respect - as opposed to lying, cheating, treason and corruption, fueled by massive amounts of money. And finally, it is a warning to the United States military that although this book is fiction, there is truth in it which should not be ignored. As for the horses? I guess you will have to read the book to find out!

Practitioners too will find food for thought and will surely be amazed by the broadness of the topics presented.

Trustworthy Global Computing Gilles Barthe, Cédric Fournet, 2008-03-18 This book constitutes the thoroughly refereed post-conference proceedings of the Third Symposium on Trustworthy Global

Computing, TGC 2007; it moreover contains tutorials from the adjacent Workshop on the Interplay of Programming Languages and Cryptography, both held in Sophia-Antipolis, France, in November 2007. The 19 revised papers presented together with 3 invited papers were carefully selected from 48 submissions during two rounds of reviewing and improvement. The TGC 2007 symposium papers focus on providing tools and frameworks for constructing well-behaved applications and for reasoning about their behavior and properties in models of computation that incorporate code and data mobility over distributed networks with highly dynamic topologies and heterogeneous devices. The volume concludes with 3 tutorial papers, presented at the co-located Workshop on the Interplay of Programming Languages and Cryptography.

The Transformation of the Social Right to Healthcare Katharina Böhm,2016-06-17 This pathbreaking book investigates welfare state change in the area of health care- a field widely neglected by comparative welfare state research. While some work on health care expenditure exists, health care rights have not been systematically studied since social rights have exclusively focused on entitlement to cash benefits. Addressing this research gap, Böhm analyses in what way the social right to health care has been modified in the course of general welfare state transformation since the late 1970s. Taking England and Germany as examples, she assesses how health care reforms conducted under the conditions of constrained budgets, demographic ageing, and rapid medical progress, have altered access to and generosity of public health care systems over the past 35 years. The book's findings significantly increase our understanding of social rights and reveals fundamental differences of approach: while Germany provides absolute and enforceable rights to health care for each (entitled) individual, English social health care rights are directed towards the population as a

whole and contingent upon the availability of resources, i.e. they are not absolute and not enforceable. This distinction between individual and collective social rights will be an important contribution to the theory of social rights given its applicability to other types of social rights and its usefulness in tracing changes in social rights over time.

Mobile Virtual Work J. H. Erik Andriessen, Matti Vartiainen, 2005-09-23 Dear Reader This is a book about mobile virtual work. It aims at clarifying the basic concepts and showing present practices and future challenges. The roots of the book are in the collaboration of few European practitioners and - searchers, who met each other under the umbrella of the Swedish SALTSA programme (see next page) in January 2002 in Stockholm. The group was first called 'ICT, Mobility and Work Organisation' but redefined itself quickly as 'Mobile Virtual Cooperative Work' group. The change of the name reflects the development of reasoning in the group. We could not find much material on mobile work, certainly not systematic studies, - though a growing interest in mobile technologies and services could be found. Practices of telework and virtual organizations were better known, but we were convinced that the combination with mobile work was so- thing different and new. Our main target became to understand what it was all about. The next step was an expert meeting in October 2004 at Rånäs Castle again in Sweden. A wider group of experts was invited to present their views on mobile virtual work and ideas about book chapters from different perspectives of working life. Some of the expertise could be found through the network of the AMI@Work family created by the New Working En- ronments unit of the European Commission's Information Society Dir- torate-General. Also close collaboration was developed with the related MOSAIC program.

Architecting Dependable Systems VII Antonio Casimiro, Rogério de Lemos, Cristina Gacek, 2010-11-18 As software systems become increasingly ubiquitous, issues of dependability

become ever more crucial. Given that solutions to these issues must be considered from the very beginning of the design process, it is clear that dependability and security have to be addressed at the architectural level. This book, as well as its six predecessors, was born of an effort to bring together the research communities of software architectures, dependability, and security. This state-of-the-art survey contains expanded, peer-reviewed papers based on selected contributions from the Workshop on Architecting Dependable Systems (WADS 2009), held at the International Conference on Dependable Systems and Networks (DSN 2009), as well as a number of invited papers written by renowned experts in the area. The 13 papers are organized in topical sections on: mobile and ubiquitous systems, architecting systems, fault management, and experience and vision.
