The Red Atlas John Davies,Alexander J.
Kent,2017-10-17 From 1950 to 1990, the Soviet Army conducted a global topographic mapping program, creating large-scale maps for much of the world that included a diversity of detail that would have supported a full range of military planning. For big cities like New York, DC, and London to towns like Pontiac, MI and Galveston, TX, the Soviets gathered enough information to create street-level maps. What they chose to include on these maps can seem obvious like locations of factories and ports, or more surprising, such as building heights, road widths, and bridge capacities. Some of the detail suggests early satellite technology, while other specifics, like detailed depictions of depths and channels around rivers and harbors, could only have been gained by actual Soviet feet on the ground. The Red Atlas includes over 350 extracts from these Cold War maps, exploring their provenance and cartographic techniques as well as what they can tell us about their makers and the Soviet initiatives that were going on all around us.

Russian Military Mapping A. A. Psarev,2005 The Manual contains information about the atmosphere, weather and climate, winds, time and length of day; about terrain and their effect on troop combat operations; about topographic and special maps and photographic documents. The book presents

basic data shown on topographic and special maps, the procedure used by unit commanders to maintain their working maps, and the effects of meteorological elements on missions and assesses terrain as an element of battlefield conditions.

A Cartographic Analysis of Soviet Military City Plans Martin Davis,2021-09-29 The collapse of the Soviet Union has seen the emergence of its unprecedentedly comprehensive global secret military mapping project and the commercial availability of a vast number of detailed topographic maps and city plans at several scales. This thesis provides an in-depth examination of the series of over 2,000 large-scale city plans produced in secret by the Military Topographic Directorate (Военное топографическое управление) of the General Staff between the end of the Second World War and the collapse of the USSR in 1991. After positioning the series in its historical context, the nature and content of the plans are examined in detail. A poststructuralist perspective introduces possibilities to utilise and apply the maps in new contexts, which this thesis facilitates by providing a systematic, empirical analysis of the Soviet map symbology at 1:10,000 and 1:25,000, using new translations of production manuals and a sample of the city plans. A comparative analysis with the current OpenStreetMap symbology indicates scope for Soviet mapping to be used as a valuable supplementary topographic resource in a variety of existing and future global mapping initiatives, including humanitarian crisis mapping. This leads to a

conclusion that the relevance and value of Soviet military maps endure in modern applications, both as a source of data and as a means of overcoming contemporary cartographic challenges relating to symbology, design and the handling of large datasets.

Soviet Military Operational Art David M.

Glantz,1991 David Glantz examines the Soviet study of war, the re-emergence of the operation level, the evolution of the Soviet theory of operations in depth before 1941, and its application in the European theatre and the Far East between 1941 and 1945.

Grau,1996 counterinsurgency punctuated by moments of heady excitement and terror. Colonel Grau, the editor and translator, has added his own commentary to produce a useful guide for commanders to meet the challenges of this kind of war and to help keep his fellow soldiers alive. This book will also be of interest to the historian and general reader, who will discover that advances in technology have had little impact on this kind of war, and that many of the same tactics the British Army used on the Northwest Frontier still apply today.

All Over the Map Betsy Mason,Greg L. Miller,2018

Created for map lovers by map lovers, this rich book explores the intriguing stories behind maps across history and illuminates how the art of cartography thrives today. In this visually stunning book, award-winning journalists Betsy Mason and Greg Miller--authors of the National Geographic cartography blog All Over the Map--explore the intriguing stories behind maps from a wide variety of cultures, civilizations, and time periods. Based on interviews with scores of leading cartographers, curators, historians, and scholars, this is a remarkable selection of fascinating and unusual maps. This diverse compendium includes ancient maps of dragon-filled seas, elaborate graphics picturing unseen concepts and forces from inside Earth to outer space, devious maps created by spies, and maps from pop culture such as the schematics to the Death Star and a map of Westeros from Game of Thrones. If your brain craves maps--and Mason and Miller would say it does, whether you know it or not--this eye-opening visual feast will inspire and delight.

Mapping the Cold War Timothy Barney, 2015-04-13
In this fascinating history of Cold War cartography, Timothy Barney considers maps as central to the articulation of ideological tensions between American national interests and international aspirations. Barney argues that the borders, scales, projections, and other conventions of maps prescribed and constrained the means by which foreign policy elites, popular audiences, and social activists navigated conflicts between North and South, East and West. Maps also influenced how identities were formed in

a world both shrunk by advancing technologies and marked by expanding and shifting geopolitical alliances and fissures. Pointing to the necessity of how politics and values were spatialized in recent U.S. history, Barney argues that Cold War-era maps themselves had rhetorical lives that began with their conception and production and played out in their circulation within foreign policy circles and popular media. Reflecting on the ramifications of spatial power during the period, Mapping the Cold War ultimately demonstrates that even in the twenty-first century, American visions of the world--and the maps that account for them--are inescapably rooted in the anxieties of that earlier era.

Soviet Blitzkrieg Walter S. Dunn Jr., 2008-02-12 Two weeks after the Americans, British, and Canadians invaded Western Europe on D-Day, June 6, 1944, the Soviet Union launched Operation Bagration on the Eastern Front, its massive attempt to clear German forces from Belarus. In one of the largest military campaigns of all time, involving 2 million Soviets and 800,000 Germans, the Red Army advanced 170 miles in two weeks and destroyed German Army Group Center. Using recently declassified Soviet documents as well as German and Soviet unit histories, Dunn recounts this

landmark operation of World War II.

The Cold War Wilderness of Mirrors Aden Magee, 2021-07-31 This book details the Soviet Military Liaison Mission (SMLM) in West Germany and the U.S. Military Liaison Mission (USMLM) in East Germany as microcosms of the Cold War strategic intelligence and counterintelligence landscape. Thirty years since the fall of the Berlin Wall, the Soviet and U.S. Military Liaison Missions are all but forgotten. Their operation was established by a post-WWII Allied occupation forces' agreement, and missions had relative freedom to travel and collect intelligence throughout East and West Germany from 1947 until 1990. This book addresses Cold War intelligence and counterintelligence in a manner that provides a broad historical perspective and then brings the reader to a never-before documented artifact of Cold War history. The book details the intelligence/counterintelligence dynamic that was among the most emblematic of the Cold War. Ultimately, the book addresses a saga that remains one of the true Cold War enigmas.

Russian-Soviet Unconventional Wars in the Caucasus, Central Asia, and Afghanistan

[Illustrated Edition] Dr. Robert F. Baumann, 2015-11-06 [Includes 12 maps and 4 tables] In recent years, the U.S. Army has paid increasing attention to the conduct of unconventional warfare. However, the base of historical experience available for study has been largely American and overwhelmingly Western. In *Russian-Soviet Unconventional Wars in the Caucasus, Central Asia, and Afghanistan*, Dr. Robert F.

Baumann makes a significant contribution to the expansion of that base with a well-researched analysis of four important episodes from the Russian-Soviet experience with unconventional wars. Primarily employing Russian sources, including important archival documents only recently declassified and made available to Western scholars, Dr. Baumann provides an insightful look at the Russian conquest of the Caucasian mountaineers (1801-59), the subjugation of Central Asia (1839-81), the reconquest of Central Asia by the Red Army (1918-33), and the Soviet war in Afghanistan (1979-89). The history of these wars—especially as it relates to the battle tactics, force structure, and strategy employed in them—offers important new perspectives on elements of continuity and change in combat over two centuries. This is the first study to provide an in-depth examination of the evolution of the Russian and Soviet unconventional experience on the predominantly Muslim southern periphery of the former empire. There, the Russians encountered fierce resistance by peoples whose cultures and views of war differed sharply from their own. Consequently, this Leavenworth Paper addresses not only issues germane to combat but to a wide spectrum of civic and propaganda operations as well.
