Marketing Food to Children and Adolescents Nicoletta A. Wilks,2009 This book explores the concern about the dramatic increase in childhood obesity in the United States which has prompted Congress to request that the Federal Trade Commission conduct a study of food and beverage marketing to children and adolescents. The results of that study - an analysis of 2006 expenditures and activities by 44 companies - are presented here. Included are not only the traditional measured media - television, radio, and print, but also activities on the Internet and other new electronic media, as well as previously unmeasured forms of marketing to young people, such as packaging, in-store advertising, event sponsorship, and promotions that take place in schools. Integrated advertising campaigns that combine several of these techniques and often involve cross-promotions - linking a food or beverage to a licensed character, a new movie, or a popular television program, dominate today's landscape of advertising to youth. The data presented in this book tell the story of food and beverage marketing in a year just preceding, or early in the development of, industry self-regulatory activities designed to reduce or change the profile of such marketing to children. Furthermore, this book, which compiles information not previously assembled or available to the research community, may serve as a benchmark for measuring future progress with respect to these initiatives.

Insects of the Los Angeles Basin Charles Leonard Hogue,1993 Southern California is home not only to the country's second largest metropolitan center but to an estimated 3,000 to 4,000 different kinds of insects. Insects of the Los Angeles Basin provides an introduction to more than 400 of the most conspicuous or curious of these invertebrate animals and to about 70 spiders, mites and ticks, and related forms. With color photographs or drawings of all but a few species, the text describes the size and most striking physical characteristics of adults and immature stages and gives information on locomotion and behavior, offensive and defensive maneuvers, mating rituals, food preferences, nests and traps, and noises and scents. The specific habitat and general geographic range of each insect are included, as are lore and superstition regarding some notorious species. The author, Dr. Charles L. Hogue, has answered the questions that he was most often asked in his position as Curator of Entomology at the Natural History Museum of Los Angeles County. The result is a highly readable text with an emphasis on the effects that insects have on the people who encounter them.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Achtung-Panzer! Heinz Guderian,1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.
