Extended Reality Usage During COVID 19 Pandemic Anitha S. Pillai, Giuliana Guazzaroni, 2022-01-24 This book explores the benefits to online teaching incorporating extended reality technologies both from a teacher's and from a students' perspective. As we are all aware, the COVID-19 pandemic has created a worldwide lock down which is clearly visible in individuals' shifting behaviour as they are keeping away from public contact, large events, weddings, places of worship, public transportation, restaurant, flights, shopping malls, etc. People across the world have adopted to Work From Home (WFH) concept using digital technology. They are teaching, learning, conducting meetings, seminars, etc., using digital medium. As people were not allowed to go out and buy things, online shopping was in demand and extensible reality helped in marketing the products and customers could also have a better shopping experience. Gaming industry has always brought in many new games for children and adults. Healthcare sector also leveraged the benefits of this technology to the fullest extent. The use of augmented and virtual reality in art and museum is also highlighted. Our book presents the different sectors that have benefitted using this technology during this time of crisis. This book will be very useful

for students, professionals and researchers working in the area of virtual, augmented or mixed reality. Our aim is to bring out the use of this technology during the COVID-19 pandemic so that the readers are exposed to the various applications of this technology.

Welcome to the Universe in 3D Neil deGrasse

Tyson, Michael A. Strauss, J. Richard Gott, Robert J.

Vanderbei, 2022-04-19 Presenting a rich array of stereoscopic color images, which can be viewed in 3D using a special stereo viewer that folds easily out of the cover of the book, this book reveals your cosmic environment as you have never seen it before.

Journey into the vast depths of the observable universe by visualising the most spectacular images in astronomy in stereoscopic 3D. Welcome to the Universe in 3D takes you on a grand tour of the observable universe, guiding you through the most spectacular sights in the cosmos in a breathtaking 3D.

Astronomy is the story of how humankind's perception of the two-dimensional dome of the sky evolved into a far deeper comprehension of an expanding three-dimensional cosmos. This book invites you to take part in this story by exploring the universe in depth, as revealed by cutting-edge astronomical research and observations. You will journey from the Moon through the solar system, out to exoplanets, distant nebulae, and galaxy clusters, until you finally reach the cosmic microwave background radiation (or CMB), the most distant light we can observe. The distances to these celestial wonders range from 1.3 light-seconds to 13.8 billion light-years. Along the way, the authors explain the fascinating features of what you are seeing, including how the 3D images were made using the same technique that early astronomers devised to measure distances to objects in space. The dramatic 3D images in this one-of-a-kind book will astonish you, extending your vision out to the farthest reaches of the universe. You will never look up into the night sky the same way again.

The Trill'eon Chronicles Thomas J Wood,2013-04-02 Roakan rose from his concealed cover, raised his sword above his head as more human warriors ran down the ramp of the warship to refortify their depleting forces. Roakan let out a mighty blood curdling battle cry and lowered his sword toward the human formation and as he did so he began jumping over the rubble that concealed him and led his warriors on a foot charge into the ranks of the human contingent. As he reached the first line of the human enemies Obaizen and his warriors were on their enemies rear flank as both collided with the wall of the human warriors at the front and rear flanks at almost the same instant. The humans by this time had drawn hand weapons and met the onslaught with as much fearlessness as the attacking Goathrunouk warriors. The two lines of warriors entangled in a clash of bodies, metal, and bone. In the morning sunrise there was the glitter of flashing swords, shredded metal, and the spray of blood as warriors screamed their last lifes song. Soon, all that would be left would be the silent victors and the dying as the sun continued to rise as it had done so for millions of years before, unaffected in its designed purpose by the happenings of mere mortals.

Construction Innovation and Process Improvement

Akintola Akintoye, Jack Goulding, Girma Zawdie, 2012-04-30 Innovation in construction is essential for growth. The industry strives to remain competitive using a variety of approaches and needs to engage structured initiatives linked to proven innovation concepts, techniques and applications. Even in mature markets like the Architecture, Engineering and Construction (AEC) sector, where business behaviour is generally considered as being risk averse, it is increasingly important to embed innovation into mainstream business practices. In Construction Innovation and Process Improvement a number of wide ranging issues from

construction practice in different countries with different contexts are presented to provide a rich collection of literature embracing theory and practice. Chapters are divided into three broad themes of construction innovation relating to: Theory and Practice; Process Drivers; and Future Technologies. Several questions are posed, including for example: What is particularly unique about construction innovation in theory and practice? What are the major drivers of construction innovation? What factors are needed to support and deliver future construction technologies? In attempting to respond to such questions, the book sheds new light on these challenges, and provides readers with a number of ways forward, especially cognisant of the increased role of globalisation, the enhanced impact of knowledge, and importance of innovation. All these can have a significant impact on strategic decision-making, competitive advantage, and sustainable policies and practices. Part One deals with change management, technology, sustainable construction, and supply chain management; Part Two addresses innovation and process improvement drivers, including strategic management, concurrent engineering, risk management, innovative procurement, knowledge management; Part Three explores future technologies in construction – and particularly, how these can be harnessed and leveraged to help procure innovation and process improvement.
