John W. Macvey

**Space Weapons, Space War** John W. Macvey, 1985

**Counterspace** William B. Scott, Michael J. Coumatos, William J. Birnes, 2011-08-02 What if North Korea detonates a nuclear weapon in space and silences dozens of satellites? What if an Iranian missile threatens to destroy Israel, while a Venezuelan “research” satellite endangers one of the US’s most promising space initiatives? What if tech-savvy terrorist cells unleash back-to-back horrors in California while national leaders, robbed of spy satellite imagery, are forced to make “blind” decisions? These are the scenarios of *Counterspace*, a frighteningly plausible look at threats to the United States and the world. Scott, Coumatos, and Birnes use war gaming scenarios to show how the US Strategic Command might use current and near-future technology to prevent global disaster. *Counterspace* is equally the revelation of a terrifying possibility and the hopeful affirmation that America will triumph in the face of danger.

*Space Warfare* Nordin Yusof, 1999

*The First Space War* J. Furman Daniel III, T. K. Rogers, 2019-10-31 Unfortunately, much of what people believe about war in space has been shaped, or misshaped, by Hollywood and other forms of popular media. In this book a STEM educator and a political science professor team up to explore the possibilities for warfare in space and explain why almost everything you've learned about space wars from movies is disappointingly wrong. The truth is stranger and more interesting than fiction. Using history, politics and STEM as guides, this book provides a detailed account of how Earth's first war in space will be fought. As we show, it will begin not as an invasion of Earth by super-advanced aliens but by Earth starting a war with its Martian colony.

**Space Wars** Michael J. Coumatos, William B. Scott, William J. Birnes, 2007-04-17 Michael J. Coumatos is a former U.S. Navy test pilot, ship's captain, and commodore; U.S. Space Command director of wargaming; and a government counterterrorism advisor. William Scott is a retired bureau chief of Aviation Week and Space Technology and a nine-year Air force veteran who served as aircrew on nuclear sampling missions. He is a six-time Royal Aeronautical Society Journalist of the

Year finalist, and won the Society's 1998 Lockheed Martin Award for the Best Defense Submission. He also received both the 2006 and 2007 Messier-Dowty awards for Best Airshow Submission. With the help of New York Times bestselling author William J. Birnes, these renowned experts have joined forces to grippingly depict how the first hours of World War III might play out in the year 2010.

Coumatos, Scott, and Birnes take the reader inside U.S. Strategic Command, where top military commanders, space-company executives, and U.S. intelligence experts are conducting a DEADSATs II wargame, exploring how the loss of critical satellites could lead to nuclear war. The players don't know that the war they are gaming has already begun, miles above them in the lifeless, silent cold of space. Jam-packed with the actual systems and secret technologies the United States has or will soon field to protect its space assets, *Space Wars* describes a near-future nuclear nightmare that terrorists will relish but politicians prefer to ignore. In a quieter, more peaceful time, *Space Wars* would be an exciting work of fiction. But with the United States now at war, *Space Wars* is all too real. . At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

*Air Force Magazine* ,2012

*Space War* Max Lamirande,2023-07-12 The Empire built by Haakon the Great is no more. It's 4124, and the Human race has spread to the stars in four different star clusters by achieving the speed of light and wormholes. A civil war has broken out between the different human enclaves to see who will be the next emperor of humanity. The Ptolemy and Hadesian Star Nations are invading Elysium, allied with New America from the Alpha Perseis Cluster. Large battles are being fought in star systems between former comrades of the Imperial Fleet. In space, battleships unload their powerful weapons at each other while giant battles mechas fight for control of the ground. The opportunity is too great for the evil Cybernetic forces in the Caldwell 14 Star Cluster. Having fought - and lost - a terrible war against the Empire two hundred years ago, they are gathering for a return engagement against humanity. A thousand years ago, Haakon has dreamed and foreseen a terrible time for humanity. The Black Death is coming to consume all, and his Empire will not be there to fight it.

*Countdown to Space War* Bhupendra Jasani,Christopher Lee,Stockholm International Peace

Research Institute,2020-11-19 Only two years after Sputnik, weapons were created for attacking spacecraft. These were based on land. But now there is talk of weapons in space-instant-kill beams like lasers. President Reagan has offered a vision of new inventions that could stop nuclear missile attacks. But will they work? Can lasers make nuclear weapons obsolete? Or would they merely be used to wage Stars Wars? Originally published in 1984, this is mainly the story of the military use of space. It shows how the new technology could trigger nuclear world war. And it looks for a way out...

*War at the Speed of Light* Louis A. Del Monte,2021-03 *War at the Speed of Light* describes the revolutionary and ever-increasing role of directed-energy weapons (such as laser, microwave, electromagnetic pulse, and cyberspace weapons) in warfare. Louis A. Del Monte delineates the threat that such weapons pose to disrupting the doctrine of Mutually Assured Destruction, which has kept the major powers of the world from engaging in nuclear warfare. Potential U.S. adversaries, such as China and Russia, are developing hypersonic missiles and using swarming tactics as a means to defeat the U.S. military. In response, the U.S. Department of Defense established the 2018 National Security

Strategy, emphasizing directed-energy weapons, which project devastation at the speed of light and are capable of destroying hypersonic missiles and enemy drones and missile swarms. Del Monte analyzes how modern warfare is changing in three fundamental ways: the pace of war is quickening, the rate at which weapons project devastation is reaching the speed of light, and cyberspace is now officially a battlefield. In this acceleration of combat called hyperwar, Del Monte shows how disturbingly close the world is to losing any deterrence to nuclear warfare.

**Silly Alien Space War Stories for Bigger Kids** Denis Hayes, 2014-04 Do other superior beings really exist outside of Earth? Of course they do and in this book they are very active all over all over the Universe but not always in a serious way. The Sramsians, Sunevians and Otulpians are from three identical planets in the same orbit around the same sun in a very old galaxy on the far side of the Universe that has no sides. They come from a Galaxy so old that its name has been forgotten and so is just called The Oldest Galaxy. The Creator has made them Caretakers, Custodians and the Commissioners of the Universe as the Creator is very busy creating. This second book in the series

centres around an attack from another Universe led by an Alien who had slipped into our Universe aeons before and had created havoc. He had been deported, supposedly back to his own Universe but had been dumped into a different one by mistake. He has been plotting his revenge ever since. Our Aliens have developed a Space Fighter to end all wars but found that only Humans can utilise it to the full. This is a story of how one man saved the Universe and returned to tell the tale.

**Space Warfare and Defense** Bert Chapman, 2008-03-19 This timely resource provides a history of the development of space weapons and warfare strategies and a comprehensive reference guide to the growing literature on the subject. *Space Warfare and Defense: A Historical Encyclopedia and Research Guide* provides comprehensive coverage of the development of space as a possible arena for warfare, exploring the military uses of space—past, present, and future—and specific details of actual space weapons systems. The encyclopedia spans the breadth of U.S. military space policy; comparable programs in the Soviet Union, China, and the European Union; and the full array of international agreements designed to regulate the military uses of space. In addition, the encyclopedia

includes an extensive reference guide (nearly 40 percent of the book) directing readers to the essential literature on space weapons and defense systems produced by the United States, other governments, research institutions, and additional sources. At a time when space is becoming an increasingly important place of military competition and potential conflict, *Space Warfare and Defense* dispels the myths and examines the realities of what may become humanity's ultimate battlefield.

Militarizing Outer Space Alexander C.T. Geppert, Daniel Brandau, Tilmann

Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry. Concentrating on weapons, warfare and violence, this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens. The third and final volume in the groundbreaking European Astroculture trilogy, Militarizing Outer Space zooms in on the interplay between security, technopolitics and knowledge from the 1920s through the 1980s. Often hailed as the site of heavenly utopias and otherworldly salvation, outer space transformed from a promised sanctuary to a present

threat, where the battles of the future were to be waged. Astroculture proved instrumental in fathoming forms and functions of warfare's futures past, both on earth and in space. The allure of dominating outer space, the book shows, was neither limited to the early twenty-first century nor to current American space force rhetorics.

All Possible Wars? Sam J. Tangredi, 2000 This survey is a product of the Quadrennial Defense Review (QDR) 2001 Working Group, a project of the Institute for National Strategic Studies at the National Defense University. Sponsored by the Chairman of the Joint Chiefs of Staff, the working group is an independent, honest-broker effort intended to build intellectual capital for the upcoming QDR. More specifically, it aims to frame issues, develop options, and provide insights for the Chairman, the services, and the next administration in three areas: defense strategy, criteria for sizing conventional forces, and force structure for 2005-2010. One of the group's initial tasks was to assess the future security environment to the year 2025. This was pursued by surveying the available literature to identify areas of consensus and debate. The goal was to conduct an assessment that

would be far more comprehensive than any single research project or group effort could possibly produce. This survey documents major areas of agreement and disagreement across a range of studies completed since the last QDR in 1997. Because it distills a variety of sources and organizes and compares divergent views, this volume makes a unique contribution to the literature. It also provides a particularly strong set of insights and assumptions on which both strategists and force planners can draw in the next Quadrennial Defense Review. This survey does not claim to predict or illustrate all possible wars that America might face between now and the year 2025. Rather, it attempts, through analysis of representative and reputable sources, to incorporate the most likely characteristics of the future security environment into a single scenario, while heightening our awareness of dissenting viewpoints and plausible wild cards.

**China's Military Modernization** Richard D. Fisher, Jr., 2008-09-30 China's rise to global economic and strategic eminence, with the potential for achieving pre-eminence in the greater-Asian region, is one of the defining characteristics of the post-Cold War period. This work offers a basic understanding

of the military-strategic basis and trajectory of a rising China, provides background, and outlines current and future issues concerning China's rise in strategic-military influence. The next decade may witness China's assertion of military or strategic pressure on Japan, the Korean Peninsula, India, the South China Sea, the Taiwan Strait, Central Asia, or even on behalf of future allies in Africa and Latin America. While conflict is not a foregone conclusion, as indicated by China's increasing participation in many benign international organizations, it is a fact that China's leadership will pursue its interests as it sees them, which may not always coincide with those of the United States, its friends, and allies. Until now, no single volume has existed that provides an authoritative, comprehensive, and concise description of China's evolving geo-strategy or of how China is transforming its military to carry out this strategy. Fisher examines how China's People's Liberation Army (PLA) remains critical to the existence of the Chinese Communist government and looks at China's political and military actions designed to protect its expanded strategic interests in both the Asia-Pacific and Central to Near-Asian regions. Using open sources, including over a decade of unique interview sources, Fisher documents China's

efforts to build a larger nuclear force that may soon be protected by missile defenses, modern high technology systems for space, air, and naval forces, and how China is now beginning to assemble naval, air, and ground forces for future power projection missions. His work also examines how the United States and other governments simultaneously seek greater engagement with China on strategic concerns, while hedging against its rising power. Although China faces both internal and external constraints on its rise to global eminence, it cannot be denied that China's government is pursuing a far-reaching strategic agenda.

*Desert Screen* Paul Virilio, 2005-06-30 *Desert Screen* is a vision of future war. Paul Virilio identifies the Gulf War as a turning point in history, the last industrial and the first information war. Virilio argues that we live in a world still exhausted from the geopolitics of the Cold War, a world in which the politics of military and media technology seem to preclude the possibility of negotiation and diplomacy. This new translation of an already classic text includes a new interview with Virilio in which he looks back at a decade of war at the speed of light.

## **Covert Wars and Clash of Civilizations Joseph P. Farrell, 2013-07-24**

Oxford-educated historian Joseph P. Farrell delivers the sequel to his best-selling *Covert Wars and Breakaway Civilizations*, part of his book series on suppressed technology, Nazi survival, secret finance and postwar hidden conflicts. His customary meticulous research and sharp analysis blow the lid off of a worldwide web of nefarious financial and technological control that very few people even suspect exists. Farrell delves deeper into the breakaway civilizations created by the Nazis in South America and other parts of the world. He elaborates on the advanced technology that they took with them at the “end” of World War II and shows how they created a huge system of hidden finance with the involvement of leading financial institutions around the world. He exposes the secret space programs used by the breakaway civilizations and reveals the clash of civilizations—a virtual secret war going on around us. He investigates the current space secrecy that involves UFOs, suppressed technologies and the hidden oligarchs who control planet Earth for their own gain and profit. Farrell probes the mystery surrounding Dr. Kurt Debus and his links to NASA and Werner von Braun. He uncovers the covert operations of

Richard Bissell, the flying saucer designs of Alfred Loedding and T. Townsend Brown, and strange activity on Mars involving UFOs. He explains the magneto-hydrodynamic anti-gravity drives that would easily power such craft. He includes a continued discussion of “emulational” technologies (those that can imitate acts of god/nature, like earthquakes and storms) from the standpoint of the culture of “full spectrum dominance” and the culture of “plausible deniability.” Farrell includes plenty of astounding accounts, documents and speculation on the amazing alternative history of hidden conflicts, secret oligarchies and super technology.
