The Causes and Costs of Depository Institution Failures Allin F. Cottrell,Michael S. Lawlor,John H. Wood,2012-12-06 One of the major financial market events of the 1980s was the precipitous rise of depository institution failures including banks, savings and loan associations, and credit unions. Not since the 1930s has there been a similar period of turmoil in these industries. The events of the 1980s have inspired a renewed interest in the causes and cost of financial institution failure and several questions that had seldom been asked in the post-World War II economics literature have resurfaced Why do financial institutions fail? What are the costs of their failure? How do they differ from other firms and industries? What are the implications for financial market regulation? The Causes and Costs of Depository Institution Failures critically surveys and extends previous analyses of these questions. Audience: Scholars and researchers in the areas of money and banking, financial institutions, and financial markets, as well as regulators and policymakers.

Sales Management Control Strategies in Banking Florian Mueller,2011-02-07 Florian Mueller empirically investigates how retail, private, and corporate banking institutions need to set up their sales management control strategy in accordance to their specific environment, business strategy, and organizational characteristics in order to increase performance.

Distance, Rating Systems and Enterprise Finance Franz Flögel,2018-07-27 In response to the credit crunch during the global financial crisis of 2007–2008, many have called for the re-establishment of regional banks in the UK and elsewhere. In this context, Germany’s regional banking system, with its more than 1,400 small and regional savings banks and cooperative banks, is viewed as a role model in the financing of small and medium-sized enterprises (SMEs). However, in line with the ‘death of distance’ debate, the universal application of ICT-based scoring and rating systems potentially obviates the necessity for proximity to reduce information asymmetries between banks and SMEs, calling into question the key advantage of regional banks. Utilising novel ethnographic findings from full-time participant observation and interviews, this book presents intimate insights into regional savings banks and compares their SME lending practices with large, nationwide-operating commercial banks in Germany. The ethnographic insights are contextualised by concise description of the three-pillar German banking system, covering bank regulation, structural and geographical developments, and enterprise finance. Furthermore, the book advances an original theoretical approach that combines classical banking theories with insights from social studies of finance on the (ontological) foundation of new realism. Ethnographic findings reveal varying distances of credit granting depending on the rating results, i.e. large banks allocate considerable credit-granting authority to local staff and therefore challenge the proximity advantages of regional banks. Nevertheless, by presenting case studies of lending to SMEs, the book demonstrates the ability of regional banks to capitalise on proximity when screening and monitoring financially distressed SMEs and explains why the suggestion that ICT can substitute for proximity in SME lending has to be rejected.

Unlimited Liability of State-owned Banks under the EC-Rules of State Aids Ulrich Immenga,Joachim Rudo,2012-12-06 The applicability of EC law of state aids to the state`s unlimited liability for Savings Banks and Landesbanken is controversial. Legal and political discussions following the Maastricht-II-Treaty tend to assume that liabilities have to be qualified as state aids. However, as the liabilities in question derive from public ownership, they have to be distinguished from securities for corporate debts which might be qualified as state aids under EC law. In this context the book discusses state aids to public companies and the private investor test of the EC Court of Justice. The authors question the EC Commission`s concept to quantify refinancing advantages which are supposed to be achieved by virtue of public liability.

The Interaction between Financial Stability and Financial Institutions: Some Reflections Käfer, Benjamin,2016-12-16 The contribution of this dissertation is to investigate financial stability issues from three different perspectives, illustrating that financial instability shows different characteristics over time, among financial institutions, and across financial activities. Chapter 1 reviews the normative and positive monetary policy literature on Taylor rules which have been augmented with exchange rates, asset prices, credit or leverage, and spreads. In addition, the chapter compares the development of these indicators for the core and the periphery of the Eurozone from 1999 (with the introduction of the euro) until 2013. Chapter 2 goes on to investigate the funding advantage that is provided to German Landesbanken by the joint liability scheme of the German Savings Banks Finance Group. Chapter 3 investigates peer-to-peer (P2P) lending and shows that the changing role of soft information, online platform default risk, liquidity risk and underdeveloped online secondary markets, and the institutionalization of P2P markets implies larger risks than traditional banking. Moreover, P2P lending can be considered part of the shadow banking sector.
