The Physics of Nascar Diandra Leslie-Pelecky,2008-02-14 A physicist explores the science of speed racing and the #1 spectator sport in America in the perfect gift for both NASCAR and science fans. Every NASCAR fan—at one time or another—asks the same

question: Why isn't my favorite driver winning? This is your chance to discover how much more there is to NASCAR than "Go fast, turn left and don't crash." If you've ever wondered why racecars don't have mufflers, how "bump drafting" works, or what in the world "Let's go up a pound on the right rear and add half a round of wedge" means, *The Physics of NASCAR* is for you. In this fast-paced investigation into the adrenaline-pumping world of NASCAR, a physicist with a passion uncovers what happens when the rubber hits the road and 800-horsepower vehicles compete at 190 miles per hour only inches from one another. Diandra Leslie-Pelecky tells her story in terms anyone who drives a car—and maybe occasionally looks under the hood--can understand. How do drivers walk away from serious crashes? How can two cars travel faster together than either car can on its own? How do you dress for a 1800°F gasoline fire? In simple yet detailed, high-octane prose, this is the ultimate thrill ride for armchair speed demons, auto science buffs, and NASCAR fans at every level of interest. Readers, start your engines.

The Official Racing Book Sophia Kelly, 2008 With special cover effects and interior gatefolds, this racing guide is a must have for the ultimate Speed Racer fan! This full colour deluxe guide features details about the plot, characters, cars and thrilling races.

Science of Race Cars: Studying Forces and Motion Karen Latchana Kenney, 2016-01-01 In this engaging title, young readers learn about the moving form of energy that is motion! The relationship of mass and acceleration is explained, as are the forces of downforce, updraft, friction, inertia, centripetal force, and the role of aerodynamics in

managing these forces. These properties are illustrated by the running of car races. Colorful infographics make internal combustion, mass and acceleration, and centripetal force easily accessible, and prominent contributors such as Junior Johnson and Sir Isaac Newton are featured. A fun experiment with friction brings the science of motion to life! Aligned to Common Core Standards and correlated to state standards. Checkerboard Library is an imprint of Abdo Publishing, a division of ABDO.

Ultimate Speed Samuel Hawley, Craig Breedlove, 2018-10-02 An L.A. hot rodder with a high school education, a family to support and almost no money, Craig Breedlove set out in the late 1950s to do something big: harness the thrust of a jet in a car. With a growing obsession that would cost him his marriage, he started building in his dad's garage. The car's name: Spirit of America. Through perseverance and endless hard work, Craig completed Spirit and broke the land speed record on the Bonneville Salt Flats, setting a new mark of 407 mph in 1963. In the early 1970s he turned to rockets and set an acceleration record at Bonneville that stands to this day. He built a jet car in the 1990s, Spirit of America–Sonic Arrow, to go head-to-head against Britain's ThrustSSC to be the first to Mach One. Craig's subsequent crash at 675 mph remains the fastest in history. Even today, at the age of 80, he is going strong with plans for yet another Spirit of America racer. The ultimate goal: 1,000 mph. Ultimate Speed is the authorized biography of Craig Breedlove, a candid revelation of one of motorsports' most interesting figures based primarily on countless hours of interviews with Craig and dozens of people connected to his life.

Race Cars Ian Graham, 2008 Have you ever wanted to drive a race car? This new edition of 'Race Cars' looks at how the fastest cars on the

track are designed, built, and driven. Lined up for inspection are the V8 NASCAR stock cars, the Audi R10 Le Mans sports car, the caged-in supercharged Top Fuel Dragsters. Take a closer look at the McLaren MP4-22 and what its Formula 1 team does to keep it on top. Start your engines. The revised and updated 'Designed for Success' series shows how designers create the very best cars, planes, motorcycles, and other exciting vehicles. It explains the many design challenges that designers and engineers must overcome and the factors they must take into account, such as materials, cost, and new technology.
