Tables of IGY Monthly Median Ionospheric Data W. J. G. Beynon,C. M. Minnis,2013-10-22 Annals of the International Geophysical Year, Volume 17: Tables of IGY Monthly Median Ionospheric Data: Part IV is the fourth of six volumes of I.G.Y. data containing tables of monthly median values of ionospheric characteristics for the period July 1957-January 1959 inclusive. The data are extracted from booklets, bulletins and data summaries of many kinds which have been prepared at ionospheric observatories and sent to one of the Discipline V World Data Centers at Boulder, Moscow, Slough, and Tokyo. This volume is composed of 21 chapters representing the stations, which are arranged in alphabetical order. The tables for each station are preceded by some of the more important information relating to the station. This information is taken from the Ionospheric Stations Manual (U.S.R.I., 1958) that also contains hourly values of cos X and many other useful data. Both the U.R.S.I, three letter code and the C.S.A.G.I. number have been included in the tables to facilitate reference either to the Ionospheric Stations Manual or to Annals of the I.G.Y. Volume VII. This book will be of value to geophysicists, researchers, and workers in the allied fields.

Trends in Health Status, Services, and Finance: Statistical annex Ellen Goldstein,1996-01-01 Education systems in more than 50 countries, most of them in the industrial world, have in recent years shown an interest in obtaining information on what their students have actually learned as a result of their educational experiences. This interest has been manifested either by developing national procedures to assess students' achievements or by participating in international studies of student achievement. This book provides introductory information on ways of assessing the learning outcomes of education systems. It considers the nature, choice, and use of indicators and describes numerous approaches to assessing learning outcomes in selected industrial countries (the United States and the United Kingdom) and developing countries (Chile, Colombia, Mauritius, Namibia, and Thailand). The authors also review systems of comparative international assessment and debate whether developing countries should participate in them. The book contains boxes and tables; an appendix features a national assessment checklist.

Educational Measurement for Applied Researchers Margaret Wu,Hak Ping Tam,Tsung-Hau Jen,2017-01-02 This book is a valuable read for a diverse group of researchers and practitioners who analyze assessment data and construct test instruments. It focuses on the use of classical test theory (CTT) and item response theory (IRT), which are often required in the fields of psychology (e.g. for measuring psychological traits), health (e.g. for measuring the severity of disorders), and education (e.g. for measuring student performance), and makes these analytical tools accessible to a broader audience. Having taught assessment subjects to students from diverse backgrounds for a number of years, the three authors have a wealth of experience in presenting educational measurement topics, in-depth concepts and applications in an accessible format. As such, the book addresses the needs of readers who use CTT and IRT in their work but do not necessarily have an extensive mathematical background. The book also sheds light on common misconceptions in applying measurement models, and presents an integrated approach to different measurement methods, such as contrasting CTT with IRT and multidimensional IRT models with unidimensional IRT models. Wherever possible, comparisons between models are explicitly made. In addition, the book discusses concepts for test equating and differential item functioning, as well as Bayesian IRT models and plausible values using simple examples. This book can serve as a textbook for introductory courses on educational measurement, as supplementary reading for advanced courses, or as a valuable reference guide for researchers interested in analyzing student assessment data.
