Handbook of Research on Strategic Performance Management and Measurement Using Data Envelopment Analysis Osman, Ibrahim H.,2013-08-31 Organizations can use the valuable tool of data envelopment analysis (DEA) to make informed decisions on developing successful strategies, setting specific goals, and identifying underperforming activities to improve the output or outcome of performance measurement. The Handbook of Research on Strategic Performance Management and Measurement Using Data Envelopment Analysis highlights the advantages of using DEA as a tool to improve business performance and identify sources of inefficiency in public and private organizations. These recently developed theories and applications of DEA will be useful for policymakers, managers, and practitioners in the areas of sustainable development of our society including environment, agriculture, finance, and higher education sectors.

Sustainable Development and Planning XII J.J. Casares,2022-08-09 Planners, environmentalists, architects, engineers, policymakers and economists have to work together to ensure that planning and development can meet our present needs without compromising the ability of future generations. This collaboration was the aim of the 12th International Conference on Sustainable Development and Planning, from which the papers in this volume originate. Problems related to development and planning, which affect rural and urban areas, are present in all regions of the world. Accelerated urbanisation has resulted in the deterioration of the environment and loss of quality of life. Urban development can also aggravate problems faced by rural areas such as forests, mountain regions and coastal areas, amongst many others. Taking into consideration the interaction between different regions and developing new methodologies for

monitoring, planning and implementation of novel strategies can offer solutions mitigating environmental pollution and non-sustainable use of available resources. Energy-saving and eco-friendly building approaches have become an important part of modern development, which places special emphasis on resource optimisation. Planning has a key role to play in ensuring that these solutions, as well as new materials and processes, are incorporated in the most efficient manner. The included papers feature new academic findings and their applications in planning and development strategies, assessment tools, and decision-making processes.

Assessing the Impact of Mental Category on Simulated Tank Gunnery Performance Scott E. Graham,1989 The research evaluated the effects of mental ability on the gunnery performance of 19K One Station Unit Training (OSUT) soldiers. Five hundred forty-seven soldiers were given a 35-engagement tank gunnery test on the high- fidelity Institutional-Conduct of Fire Trainer (I-COFT). The I-COFT test included offensive and defensive engagements fired in normal and degraded operational modes. The primary analysis compared speed and accuracy performance as a function of mental category as derived from General Technical (GT) scores. The test scores were also used as parameter estimates in a soldier performance model based on Lanchester-type combat attrition models. OSUT soldiers with higher mental ability were faster and more accurate on the I-COFT test than were soldiers with lower mental ability. Mental category I & II soldiers hit 14% more targets than category IV soldiers and were 2 seconds faster. The effects of mental ability were relatively the same for both normal and degraded mode exercises. Analyses based on the soldier performance model indicated that category IV soldiers performed at 73% of category I & II soldiers. Keywords: Armor; Personnel selection; Gunnery prediction; Unit conduct of fire trainer; Performance(human).

Applications of 3-D and 4-D Visualization Technology in Transportation Harlow C. Landphair,Terry R. Larsen,1996 This synthesis describes the application of computer graphics technology to transportation practice. It will be of interest to transportation planners, facilities design and construction personnel, traffic engineers, and other officials concerned with administration, public information, legal aspects, right-of-way, maintenance, operations, and safety of transportation facilities. This report of the Transportation Research Board describes the use of 3-D (artist's concepts and image composites) and 4-D (animation) visualization applications in transportation

agencies; however, since there are presently only limited applications, it is, in fact, a primer, providing information on the required hardware and software, as well as on costs, production time, and issues of complexity. More detailed information is provided on how data bases are assembled, various types of imagery, how the visualization image is generated, rendering and animation programs, printers and other output and postproduction activities. An extensive glossary is also included.
