

Spin The Pot

ML Yell

Spin Bill Gruber,2023-12-01 Everywhere, things spin--wheels turn, motors hum, tornadoes roar. This book explains the history and basic physics of spinning objects, from yo-yos, drills, propellers, and washing machines, to ballet dancers, dust devils, and bacteria. The book gives instructive, entertaining accounts of everyday sights: Does a curve ball really curve? Why do figure skaters tuck in their arms? Can you make a disposable pen fly? How does a falling cat always land on its feet? Answers to these questions (and many others) tell the amazing story of things that spin.

The Dreidel that Wouldn't Spin Martha Seif Simpson,2014 "This dreidel doesn't work!" the father had cried. "What do you mean? How can a dreidel not work?" the shopkeeper asked. It was certainly the most beautiful spinning top the shopkeeper had ever seen, with magical golden letters on its sides. But it just would not spin for two spoiled children who insisted on owning it! Later, the shopkeeper decides to try it one last time: would it spin for another child, one who carried the true spirit of Hanukkah in his heart? In this beautiful holiday story by award-winning author Martha Simpson, and brought to life by the imaginative illustrations of award-winning illustrator D. Yael Bernhard, the happiness and joy of the Hanukkah miracle will warm the heart of young and old alike with its simple message: wonders still occur for those who are ready for them. Included is a useful appendix that explains Hanukkah, and an explanation on how to play the dreidel game.

The Science of Spin Roland Ennos,2023-07-18 A clear and captivating work of popular science that explains rotational force—a basic driver of the universe affecting everything from the cosmos to our own bodies—from the masterful author of *The Age of Wood*. From the time women first used rotating bobbins to twist thread and men whirled slings around their heads to throw stones, people have found spin fascinating and baffling in equal measure. Now, in *The Science of Spin*, Roland Ennos shows how rotational motion dominates the workings of the world around us. It has shaped the solar system, galaxies, and black holes. It controls our climate and weather—from the pattern of trade winds through to the local formation of hurricanes and tornadoes. Harnessing the power of spin helped launch civilization, from the first developments of the wheel to the systems that now power the industrial world—propellers, turbines, centrifugal pumps, and electric motors. Even our own bodies are complex systems of rotating joints and levers. But scientists have a tendency to ignore the simple and straightforward. So, 17th-century scientists developed the science of mechanics to explain the phenomenon of the orbit of the planets rather than how machines work. And Newton's laws have actually limited our understanding of spin because they focus on linear motion rather than on an intuitive grasp of rotation. As a result, few people realize how spin makes our planet habitable, or how it has been tamed by engineers to make our lives more comfortable. In a lively and engaging style, Ennos presents a new approach to mechanics that not only helps us better understand the world, but also reveals unlikely links between tightrope walkers and tyrannosaurs, catapults and tennis players, stunt cars and long jumpers. By opening our minds, he shows how we can all learn to move about more gracefully, play sports more successfully and safely—and ensure that, like cats, we always land on our feet. A highly entertaining and informative

read, whether it be natural or engineered, spin is what really makes the world go round.

Will You Be Alive 10 Years from Now? Paul J. Nahin, 2014 A collection of stimulating probability puzzles from bestselling math writer Paul Nahin What are the chances of a game-show contestant finding a chicken in a box? Is the Hanukkah dreidel a fair game? Will you be alive ten years from now? These are just some of the one-of-a-kind probability puzzles that acclaimed popular math writer Paul Nahin offers in this lively and informative book. Nahin brings probability to life with colorful and amusing historical anecdotes as well as an electrifying approach to solving puzzles that illustrates many of the techniques that mathematicians and scientists use to grapple with probability. He looks at classic puzzles from the past--from Galileo's dice-tossing problem to a disarming dice puzzle that would have astonished even Newton—and also includes a dozen challenge problems for you to tackle yourself, with complete solutions provided in the back of the book. Nahin then presents twenty-five unusual probability puzzlers that you aren't likely to find anywhere else, and which range in difficulty from ones that are easy but clever to others that are technically intricate. Each problem is accompanied by an entertaining discussion of its background and solution, and is backed up by theory and computer simulations whenever possible in order to show how theory and computer experimentation can often work together on probability questions. All the MATLAB® Monte Carlo simulation codes needed to solve the problems computationally are included in the book. With his characteristic wit, audacity, and insight, Nahin demonstrates why seemingly simple probability problems can stump even the experts.

The Algebraic Theory of Spinors and Clifford Algebras Claude Chevalley, 1996-12-13 In 1982, Claude Chevalley expressed three specific wishes with respect to the publication of his Works. First, he stated very clearly that such a publication should include his non technical papers. His reasons for that were two-fold. One reason was his life long commitment to epistemology and to politics, which made him strongly opposed to the view otherwise currently held that mathematics involves only half of a man. As he wrote to G. C. Rota on November 29th, 1982: An important number of papers published by me are not of a mathematical nature. Some have epistemological features which might explain their presence in an edition of collected papers of a mathematician, but quite a number of them are concerned with theoretical politics (. . .) they reflect an aspect of myself the omission of which would, I think, give a wrong idea of my lines of thinking. On the other hand, Chevalley thought that the Collected Works of a mathematician ought to be read not only by other mathematicians, but also by historians of science.

The 144,000 Dennis Knotts, 2015-10-21 Ancient prophets spoke of us. Our names have been spoken in whispers for thousands of years. Many speculated who we would be and what we would do. Now the time is upon us. We are being called and trained. Our mission: protect the Chosen People, prepare for the Coming King, and crown Him King of the entire earth when He comes. We are ...
