Pattern Recognition Michael Goesele, Stefan Roth, Arjan Kuijper, Bernt Schiele, Konrad Schindler, 2010-09-17 On behalf of the organizing committee, we would like to welcome you to Darmstadt and DAGM 2010, the 32 Annual Symposium of the German Association for Pattern Recognition. The technical program covered all aspects of pattern recognition and, to name only a few areas, ranged from 3D reconstruction, to object recognition and medical

applications. The result is reflected in these proceedings, which contain the papers presented at DAGM 2010. Our call for papers resulted in 134 submissions from institutions in 21 countries. Each paper underwent a rigorous reviewing process and was assigned to at least three program committee members for review. The reviewing phase was followed by a discussion phase among the respective program committee members in order to suggest papers for acceptance. The final decision was taken during a program committee meeting held in Darmstadt based on all reviews, the discussion results and, if necessary, additional reviewing. Based on this rigorous process we selected a total of 57 papers, corresponding to an acceptance rate of below 45%. Out of all accepted papers, 24 were chosen for oral and 33 for poster presentation. All accepted papers have been published in these proceedings and given the same number of pages. We would like to thank all members of the program committee as well as the external reviewers for their valuable and highly appreciated contribution to the community.

Ambient Intelligence Emile H.L. Aarts, James L. Crowley, Heinz Gerhäuser, Alexander Pflaum, Janina Schmidt, Reiner Wichert, 2008-11-14 This volume contains the proceedings of the

Second European Ambient Intelligence (Aml) Conference. The conference took place in Erlangen and Nürnberg, November 19–22, 2008. The concept of ambient intelligence (Aml) was introduced in the late 1990s as a novel paradigm for electronic environments for the years 2010-2020. It builds on the early visions of Weiser describing a novel mobile computing infrastructure integrated into the networked environment of people. According to early definitions, Aml refers to smart electronic surroundings that are sensitive and responsive to the presence of people. The added value for the multi-dimensional society we are living in lies in the fact that the large-scale integration of microelectronics into the environment enables people and objects to interact with this environment in a seamless, trustworthy, and natural manner. Obviously, Aml solutions deliver a new quality of communication and information exchange, they help people to fulfill their professional tasks with increasing efficiency, enable the older generation to stay much longer in the privacy of their own homes and the younger one to lead a healthy and responsible life. Smart mobile devices navigate in private apartments as well as in complex public or industrial environments in order to support people with a broad variety of services.

European Handbook of Crowdsourced Geographic Information

Cristina Capineri,Muki Haklay,Haosheng Huang,Vyron
Antoniou,Juhani Kettunen,Frank Ostermann,Ross

Purves,2016-08-25 This book focuses on the study of the remarkable new source of geographic information that has become available in the form of user-generated content accessible over the Internet through mobile and Web applications. The exploitation, integration and application of these sources, termed volunteered geographic information (VGI) or crowdsourced geographic information (CGI), offer scientists an unprecedented opportunity to conduct research on a variety of topics at multiple scales and for diversified objectives. The Handbook is organized in five parts, addressing the fundamental questions: What motivates citizens to provide such information in the public domain, and what factors govern/predict its validity? What methods might be used to validate such information? Can VGI be framed within the larger domain of sensor networks, in which inert and static sensors are replaced or combined by intelligent and mobile humans equipped with sensing devices? What limitations are imposed on VGI by differential access to broadband Internet, mobile phones, and other communication technologies, and by concerns over privacy? How do VGI and crowdsourcing enable innovation applications to benefit human society? Chapters examine how crowdsourcing techniques and methods, and the VGI phenomenon, have motivated a

multidisciplinary research community to identify both fields of applications and quality criteria depending on the use of VGI. Besides harvesting tools and storage of these data, research has paid remarkable attention to these information resources, in an age when information and participation is one of the most important drivers of development. The collection opens questions and points to new research directions in addition to the findings that each of the authors demonstrates. Despite rapid progress in VGI research, this Handbook also shows that there are technical, social, political and methodological challenges that require further studies and research.

Computational Intelligence in Sports Iztok Fister, Iztok Fister Jr., Dušan Fister, 2018-12-17 This book presents recent research on computational intelligence (CI) algorithms in the field of sport. In the modern age, information technologies have greatly reduced the need for human effort in the carrying out of many daily tasks. These technologies have radically influenced the lives of humans,

and the information society in general. Unfortunately, these advances have brought with them certain negative effects, including the encouragement of sedentary lifestyles and the attendant health problems such as obesity that these engender. Other modern maladies, chiefly cardiovascular disease, diabetes, and cancer, have also been on the increase. Today, sports are virtually the only activity that still connects modern humans to their original lifestyle, which was based on physical motion. This book tears familiarizing sports scientists with the foundations of computational intelligence, while at the same time presenting the problems that have arisen in the training domain to computer scientists. Lastly, the book proposes the use of an Artificial Sports Trainer designed to enhance the training of modern athletes who cannot afford the considerable expense of hiring a human personal trainer. This intelligent system can monitor performance and design and direct appropriate future training, thus promoting both healthy lifestyles and competitive success in athletes.

Optimizing Health Monitoring Systems With Wireless

Technology Wickramasinghe, Nilmini, 2020-12-11 The digital transformation of healthcare delivery is in full swing. Health monitoring is increasingly becoming more effective, efficient, and timely through mobile devices that are now widely available. This, as well as wireless technology, is essential to assessing, diagnosing, and treating medical ailments. However, systems and applications that boost wellness must be properly designed and regulated in order to protect the patient and provide the best care. Optimizing Health Monitoring Systems With Wireless Technology is

an essential publication that focuses on critical issues related to the design, development, and deployment of wireless technology solutions for healthcare and wellness. Highlighting a broad range of topics including solution evaluation, privacy and security, and policy and regulation, this book is ideally designed for clinicians, hospital directors, hospital managers, consultants, health IT developers, healthcare providers, engineers, software developers, policymakers, researchers, academicians, and students.

Winning Across Global Markets Dan Steinbock, 2010-04-12

Lessons for attaining global competitiveness, one market at a time, from international business giant Nokia *Winning Across Global Markets* examines how 145-year-old Nokia grew from a paper mill

in Finland to a multinational telecommunications leader. Why are Nokia's lessons critical for other companies and industries? While multinationals based in large countries benefit from inherent advantages--such as a home base that often accounts for 30 to 50 percent of their revenues--multinationals based in smaller countries such as Nokia, enjoy no such competitive edge. Nokia, in fact, generates less than 1% of its revenues in its home base. To such a company, global competitiveness is a matter of life and death. With unparalleled access to Nokia's leadership, *Winning Across Global Markets* reveals the remarkable story of Nokia's resilience and endurance. Shows how Nokia's flexibility and focus on its people and local markets drive its distinct global approach. Includes exclusive interviews with Nokia's senior executives and key partners Provides a roadmap for developing, capturing, and sustaining global advantage This book provides a roadmap for developing, capturing, and sustaining strategic global advantage in today's ever-changing world.

Advanced Methodologies and Technologies in Media and Communications Khosrow-Pour, D.B.A., Mehdi, 2018-10-19 Media and communication advancements allow individuals across the globe to connect in the blink of an eye. Individuals can share

information and collaborate on new projects like never before while also remaining informed on global issues through ever-improving media outlets and technologies. *Advanced Methodologies and Technologies in Media and Communications* provides emerging research on the modern effects of media on cultures, individuals, and groups. While highlighting a range of topics such as social media use and marketing, media influence, and communication technology, this book explores how these advancements shape and further the global society. This book is an important resource for media researchers and professionals, academics, students, and communications experts seeking new information on the effective use of modern technology in communication applications.
