Control of Price Related Terms in Standard Form Contracts Yeşim M.

Atamer, Pascal Pichonnaz, 2019-11-19 This book explores various approaches around the world regarding price term control, and particularly discusses the effectiveness of two major paths: ex ante regulatory and ex post judicial intervention. Price control and its limits are issues that affect all liberal market economies, as well as more regulated markets. For the past several years, courts in many different countries have been confronted with the issue of whether, and to what extent, they should intervene regarding price-related terms in standard form contracts - especially in the area of consumer contracts. Open price clauses, flat remunerations, price adjustment clauses, clauses giving the seller/supplier the right to ask for additional payments, bundling or partitioning practices, etc.: a variety of price related terms are used to manipulate customers' choices, often also by exploiting their behavioral biases. The result is an unfavorable contract that is later challenged in court. However, invalidating a given price term in standard forms e.g. of a banking or utilities contract only has an inter partes effect, which means that in thousands if not millions of similar contracts, the same clauses continue to be used. Effective procedural rules are often lacking. Therefore, pricing patterns that serve to hide rather than to reveal the real cost of goods and services require special attention on the part of regulators. The aim of this book is to determine the various approaches in the world regarding price term control, and particularly to discuss the efficiency of both paths, ex ante regulatory and ex post judicial intervention. Thanks to its broad comparative analysis, this book offers a thorough overview of the methods employed in several countries. It gathers twenty-eight contributions from national rapporteurs and one supra-national rapporteur (EU) to the 2018 IACL Congress held in Fukuoka. These are supplemented by a general report presented at the same IACL Congress, which includes a comparative analysis of the national and supranational reports. The national contributors hail from around the globe, including Africa (1), Asia (5), Europe (17), the European Union (1) and the Americas (5).

Die Wahl Daniel Schweizer, 2023-09-15 Nationalrat Beda Tobler aus Langnau im Emmental ist ein politisches Schwergewicht im Bundeshaus. Er weiss das - aber er will mehr. Er will in die Regierung, in den Bundesrat. Er ist auch ein grosser Fussballfan. Die FIFA weiss das auch und lädt ihn ein an die Fussball-WM in Katar. Als Gegenleistung muss Tobler die Sitzungsplanung seiner Kommission manipulieren. Ein parlamentarischer Vorstoss gegen die FIFA soll zu einem späteren, der FIFA genehmeren Zeitpunkt, behandelt werden. Am Tag der Ersatzwahl in den Bundesrat - Tobler ist haushoher Favorit - werden dessen Mauseheleien mit dem Fussball-Weltverband der Presse gesteckt. Wird Tobler trotzdem gewählt?

Explaining Compliance Christine Parker, Vibeke Lehmann Nielsen, 2011 'Taking a broad view of regulation, and covering a wide range of issues and industries, this collection is the most innovative effort to date to understand the responses of business firms to regulation. The book brings together an impressive group of scholars who analyze the concept of compliance and offer theoretically informed studies of its assumed links to regulation. A must read for both academics and practitioners, this groundbreaking collection firmly establishes a scholarly field of compliance studies.' Ronen Shamir, Tel Aviv University, Israel 'Business responses to regulation is a key area of social science research. Parker and Nielsen's collection brings together an excellent group of scholars with innovative, and I believe highly influential contributions that problematize the

relations between regulation and compliance. The collection is a highly welcome addition to our field, that will redefine the research agenda on compliance. A significant achievement that will help to improve policy making and frame the scholarly research agenda for the years to come.' David Levi-Faur, The Hebrew University of Jerusalem, Israel and the Free University of Berlin, Germany 'A timely and important set of analyses on how and why businesses respond to regulation in the way that they do from some of the leading authors in the field, covering business responses to both state and non-state regulatory systems.' Julia Black, London School of Economics, UK Explaining Compliance consists of sixteen specially commissioned chapters by the world's leading empirical researchers, examining whether and how businesses comply with regulation that is designed to affect positive behaviour changes. Each chapter consists of reflective summaries on business compliance with different state or voluntary regulation, and the theoretical lessons to be drawn from it. As a whole, the book develops understanding and explanations of how, why and in what circumstances, firms come to comply with regulation, and when they do not. It also uncovers the complexity, ambiguity and transformation of regulation as it is interpreted, implemented and negotiated by firms, their stakeholders and internal constituencies in everyday business life. This unique and detailed resource will appeal to academics, graduate students and senior undergraduates in law, political science, sociology, criminology, economics, and psychology, as well as business and interdisciplinary areas such as law and society, and law and economics. Anyone researching business regulation, corporate social responsibility, regulation and compliance, enforcement and compliance, and public administration, will also find this book beneficial.

Legitimacy in EU Cartel Control Ingeborg Simonsson, 2010-02-23 This book examines the law developed by the EU to control cartels. The law, including case-law, is carefully documented and analysed against a standard of legitimacy which questions the EU's enforcement measures, its institutional structures, policy choices, substantive law, evidentiary standards and procedures and sanctions. It includes a unique catalogue of over 150 EU cartel decisions, as well as novel analyses of difficult borderline issues such as mixed horizontal and vertical cartels, single-brand dealer cartels and buyer cartels. The effect on trade in cartel cases is analysed with reference to established law and deterrence theory. Throughout the book the author asks whether EU law also applies at the national level, or whether certain assessments need to be made according to national law. This approach makes the book particularly helpful for national authorities, courts and private practitioners. The book includes in-depth comparisons with US law as well as a comprehensive survey of the secondary (academic) literature on cartels. As such it presents not only a comprehensive practical view, but also a sound theoretical framework for better understanding cartel law. This is a work which will be of utmost importance to those working in competition authorities and competition courts in the EU Member States, as well as those working for EU institutions and in private practice and academia.

The Debian Administrator's Handbook Raphaël Hertzog, Roland Mas, 2015-10-21 Debian GNU/Linux, a very popular non-commercial Linux distribution, is known for its reliability and richness. Built and maintained by an impressive network of thousands of developers throughout the world, the Debian project is cemented by its social contract. This foundation text defines the project's objective: fulfilling the needs of users with a 100% free operating system. The success of Debian and of its ecosystem of derivative

distributions (with Ubuntu at the forefront) means that an increasing number of administrators are exposed to Debian's technologies. This Debian Administrator's Handbook, which has been entirely updated for Debian 8 "Jessie", builds on the success of its 6 previous editions. Accessible to all, this book teaches the essentials to anyone who wants to become an effective and independent Debian GNU/Linux administrator. It covers all the topics that a competent Linux administrator should master, from installation to updating the system, creating packages and compiling the kernel, but also monitoring, backup and migration, without forgetting advanced topics such as setting up SELinux or AppArmor to secure services, automated installations, or virtualization with Xen, KVM or LXC. This book is not only designed for professional system administrators. Anyone who uses Debian or Ubuntu on their own computer is de facto an administrator and will find tremendous value in knowing more about how their system works. Being able to understand and resolve problems will save you invaluable time. Learn more about the book on its official website: debian-handbook.info

Advances in Distributed Systems Sacha Krakowiak, Santosh Shrivastava, 2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems (LSDCS). It was a collaborative project involving research institutes and universities in Bologna, Grenoble, Lausanne, Lisbon, Rennes, Rocquencourt, Newcastle, and Twente. The World Wide Web had recently been developed at CERN, but its use was not yet as common place as it is today and graphical browsers had yet to be developed. It was clear to us (and to just about everyone else) that LSDCS comprising several thousands to millions of individual computer systems (nodes) would be coming into existence as a consequence both of technological advances and the demands placed by applications. We were excited about the problems of building large distributed systems, and felt that serious rethinking of many of the existing computational paradigms, algorithms, and structuring principles for distributed computing was called for. In our research proposal, we summarized the problem domain as follows: "We expect LSDCS to exhibit great diversity of node and communications capability. Nodes will range from (mobile) laptop computers, workstations to supercomputers. Whereas mobile computers may well have unreliable, low bandwidth communications to the rest of the system, other parts of the system may well possess high bandwidth communications capability. To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes, we observe that such systems will be rarely functioning in their entirety.
