Propaganda and Information in Eastern India 1939-45 Sanjoy Bhattacharya,2013-09-13 This is a study of the social, political, economic and public health aspects of the Second World War in South Asia, with particular attention being accorded to colonial Eastern India, which was treated as a single administrative unit during the course of the conflict for strategic purposes. The conclusion deals with the long term effects of the war: its effects on political formations, bureaucratic re-negotiation and the de-colonisation of the British Indian empire.

Saturn's Moons Jo Catling,2017-07-05 The German novelist, poet and critic W. G. Sebald (1944-2001) has in recent years attracted a phenomenal international following for his evocative prose works such as *Die Ausgewanderten* (The Emigrants), *Die Ringe des Saturn* (The Rings of Saturn) and *Austerlitz*, spellbinding elegiac narratives which, through their deliberate blurring of genre boundaries and provocative use of photography, explore questions of Heimat and exile, memory and loss, history and natural history, art and nature. *Saturn's Moons: a W. G. Sebald Handbook* brings together in one volume a wealth of new critical and visual material on Sebald's life and works, covering the many facets and phases of his literary and academic careers -- as teacher, as scholar and critic, as colleague and as collaborator on translation. Lavishly illustrated, the Handbook also contains a number of rediscovered short pieces by W. G. Sebald, hitherto unpublished interviews, a catalogue of his library, and selected poems and tributes, as well as extensive primary and secondary bibliographies, details of audiovisual material and interviews, and a chronology of life and works. Drawing on a range of original sources from Sebald's Nachlass - the most important part of which is now held in the Deutsches Literaturarchiv Marbach - *Saturn's Moons* will be an invaluable sourcebook for future Sebald studies in English and German alike, complementing and augmenting recent critical works on subjects such as history, memory, modernity, reader response and the visual. The contributors include Mark Anderson, Anthea Bell, Ulrich von Buelow, Jo Catling, Michael Hulse, Florian Radvan, Uwe Schuette, Clive Scott, Richard Sheppard, Gordon Turner, Stephen Watts and Luke Williams. Jo Catling teaches in the School of Literature at the University of East Anglia and Richard Hibbitt in the Department of French at the University of Leeds.

Russian Security and Air Power, 1992-2002 Marcel Haas,2004 This new book analyzes the security policy of the Russian Federation, internally as well as externally, on all levels of strategy. It describes military and political decision-making from Moscow's grand strategy to the use of a single fighter aircraft in Chechnya. In this analysis, Russia's air forces are used as a model for all services of the armed forces. The Chechen conflicts and NATO's security policy have been dominant factors in the development of Russia's security policy during the period 1992-2002. The use of air power in the Chechen conflicts is used here as a case study for testing political and military-strategic objectives. With regard to NATO's security policy, this study shows that the eastward enlargement of this alliance, as well as its use of force in Bosnia and Kosovo, have caused an increase in anti-Western tendencies in Russian security thinking.

The Many Facets of Cosmic Explosions Alicia Soderberg,2007-10 Over the past few years, long-duration gamma-ray bursts (GRBs), including the subclass of X-ray flashes (XRFs), have been revealed to be a rare variety of Type Ibc supernova (SN Ibc). While all these events result from the death of massive stars, the electromagnetic luminosities of GRBs and XRFs exceed those of ordinary Type Ibc SNe by many orders of magnitude. The observed diversity of stellar death corresponds to large variations in the energy, velocity, and geometry of the explosion ejecta. Using multi-wavelength (radio, optical, X-ray) observations of the nearest GRBs, XRFs, and SNe Ibc, I show that GRBs and XRFs couple at least 10⁴⁸ erg to relativistic material while SNe Ibc typically couple less than 10⁴⁸ erg to their fastest (albeit non-relativistic) outflows. Specifically, I find that less than 3 percent of local SNe Ibc show any evidence for association with a GRB or XRF. Interestingly, this dichotomy is not echoed by the properties of their optical SN emission, dominated by the radioactive decay of Nickel-56; I find that GRBs, XRFs, and SNe Ibc show significant overlap in their optical peak luminosity and photospheric velocities. Recently, I identified a new class of GRBs and XRFs that are under-luminous in comparison with the statistical sample of GRBs. Owing to their faint high-energy emission, these sub-energetic bursts are only detectable nearby (z
