Annelies Wilder-Smith

Star Maps Nick Kanas, 2012-06-05 Until the publication of the first edition of 'Star Maps,' books were either general histories of astronomy using examples of antiquarian celestial maps as illustrations, or catalogs of celestial atlases that failed to trace the flow of sky map development over time. The second edition focuses on the development of contemporary views of the heavens and advances in map-making. It captures the beauty and awe of the heavens through images from antiquarian celestial prints and star atlases. This book uniquely combines a number of features: 1) the history of celestial cartography is traced from ancient to modern times; 2) this development is integrated with contemporary cosmological systems; 3) the artistry of sky maps is shown using beautiful color images from actual celestial atlases and prints; 4) each illustration is accompanied by a legend explaining what is being shown; and 5) the text is written for the lay reader based on the author's experience with writing articles for amateur astronomy and map collector magazines. This updated second edition of 'Star Maps' contains over 50 new pages of text and 44 new images (16 in color), including completely new sections on celestial frontispieces, deep-sky objects, playing card maps, additional cartographers, and modern computerized star maps. There is also expanded material about celestial globes, volvelles, telescopes, and planets and asteroids.

The Pathfinder Star Maps Edward Skinner King, 1926

Star Maps for Beginners I.M. Levitt, Roy K. Marshall, 1992-09 The author's maps, which divide the sky into quadrants, and explanations of the constellations are designed to simplify study for the amateur astronomer.

Star Maps for Beginners Israel Monroe Levitt, Roy K.

Marshall,1976

Star Maps Nick Kanas,2019-08-20 Explore the beauty and awe of the heavens through the rich celestial prints and star atlases offered in this third edition book. The author traces the development of celestial cartography from ancient to modern times, describes the relationships between different star maps and atlases, and relates these notions to our changing ideas about humanity's place in the universe. Also covered in this book are more contemporary cosmological ideas, constellation representations, and cartographic advances. The text is enriched with 226 images (141 in color) from actual, antiquarian celestial books and atlases, each one with an explanation of unique astronomical and cartographic features. This never-before-available hardcover edition includes two new chapters on pictorial style maps and celestial images in art, as well over 50 new images. Additionally, the color plates are now incorporated directly into the text, providing readers with a vibrant, immersive look into the history of star maps.

3-D Star Maps Richard Monkhouse, John Cox, 1989 Three-dimensional glasses packed inside each copy of this phenomenal new book offer an in-depth view of the universe as never before presented. 20 full-color photos and drawings; 27 3-D maps; 27 black-and-white maps. Includes 2 sets of 3-D glasses.

Pathfinder Star Maps Edward Skinner King, 1941

The Cambridge Star Atlas Wil Tirion, 2011-01-27 Ideal for astronomers worldwide, the fourth edition of this classic atlas features new Moon maps, new data and enhanced charts.

Star Maps for Southern Africa Albert Jansen, 2017-10-01 The first star guide of its kind in the southern hemisphere, this book features 96 star maps for observing the southern skies with the naked eye, standard binoculars or a small telescope. Divided into 12 sets, the maps cover all eight principal views of the sky (N, NE, E, SE, S, SW, W and NW) for each month of the year and for different times during each night. For each set of star maps, the reader is alerted to prominent stars and constellations visible during that period of viewing. Terms and concepts are explained and frequently asked

questions addressed. *Star Maps for Southern Africa* provides thorough and extensive coverage of our night skies, enabling readers to track stars and related spectacles throughout the year. It will remain relevant for a lifetime.

The Making of History's Greatest Star Map Michael

Perryman, 2010-03-20 From prehistoric times, mankind has looked up at the night sky, and puzzled at the changing positions of the stars. How far away they are is a question that has confounded scientists for centuries. Over the last few hundred years, many scientific careers – and considerable resources – have been devoted to measuring their positions and motions with ever increasing accuracy. And in the last two decades of the 20th century, the European Space Agency developed and launched the Hipparcos satellite, around which this account revolves, to carry out these exacting measurements from space. What has prompted these remarkable developments? Why have governments been persuaded to fund them? What are scientists learning from astronomy's equivalent of the Human Genome Project? This book traces the subject's history, explains why such enormous efforts are considered worthwhile, and interweaves these with a first-hand insight into the Hipparcos project, and how big science is conducted at an international level. The involvement of amateur astronomers, and the Hipparcos contributions to climate research, 'death stars' passing close to the Sun, and the search for extra-solar planets and even intelligent life itself, are some of the surprising facets of this unusual space mission.

3-D Atlas of Stars and Galaxies Richard Monkhouse, John

Cox, 2012-09-10 This astronomical atlas features not only conventional star and galaxy maps, but also spectacular three-dimensional stereographs (glasses provided). The book contains three sets of

comprehensive full-sky maps that cover local space, regional space, and distant space -- with over 20,000 galaxies. All the stereographs have been derived from the most accurate data available, including results from the Hipparcos satellite, and can be used to measure the approximate distances between the objects depicted. The distant space maps represent one of the most complete mappings of the galaxies available to amateur astronomers, and their accompanying three-dimensional views provide tantalising glimpses of structure at the largest scale of the universe.

Mapping the Sky Pamela Dell, 2011 Earth is one small speck among billions of stars, planets, and moons. So how can we figure out where it is in the universe? The answer is sky maps and charts! Maps can tell us where Earth is located in the huge star system we call the Milky Way galaxy. Charts can help us explore other planets and the Moon. They can even help us study the stars. Begin your adventure as an astronomer by using maps and star charts to learn about what you can see in the night sky-and what you can't see! Book jacket.

Star Trek Star Charts, 2002 For those who ever wondered just where the Klingon Homeworld is or how close it is to Earth, Star Charts provides fans with this information and more--including the routes of each of the ships featured in all the Star Trek series. Full-color photos throughout. 4 gatefolds.

Star Maps ... for the Use of Students in ... Observational Astronomy Goodwin DeLoss Swezey, 1901

Star Maps William R. Fix, 1979-01-01

The Constellation Observing Atlas Grant Privett, Kevin Jones, 2013-08-13 Designed for anyone who wishes to learn the constellations or observe the best and brightest deep sky objects and double stars, this book contains an alphabetical list of constellations

complete with star maps, historical background, and highlights of deep sky objects. Each entry contains position and physical information on enough stars to support astronomers in star-hopping, swinging the telescope from star to star to arrive at a faint target. It provides a carefully selected list of accessible and rewarding deep sky objects. Full-color maps show the constellations, with star types (spectral and physical) indicated by the colors used on the map. Extended objects such as galaxies and nebulae are shown with the approximate apparent size in the sky. With unmatched thoroughness and accessibility, this is a constellation atlas that makes the ideal companion to a night's telescope viewing, for novices and expert amateur astronomers alike. Easy to navigate and refer to, it is the key that unlocks the door to greater night sky exploration.
