Talcon Star City Gary Caplan, 2013-02-01 Talcon Star City has been honored as a Finalist of the 2012 International Book Awards in the Fiction: Science Fiction category. Somewhere in the future, the universe is filled with hundreds of wild, weird and completely diverse civilizations existing on a myriad of strange and wonderful planets. But amidst all these brave new worlds, are otherworldly enemies intent on control, no matter what it costs them or the universe, and all courageous people must step forward and band together to stop them. That's the premise of Gary Caplan's brilliantly realized Talcon Star City, a story of bravery, revenge, aliens, and interstellar swashbuckling. Caplan first burst onto the literary scene when he became a finalist in the highly prestigious 2010 Indie Excellence Award for his novel Phoenix Rising, which is also the prequel to Talcon Star City. Honing his craft, Caplan continued to write and went on to win the 2011 Indie Excellence Award in fantasy for his novel Return of the Ancient Ones. With Talcon Star City, he's become even more exhilarating a writer, fashioning a science fiction epic that's also thoughtful and realistic. Talcon Star City centers on the character of Commodore Robert Sheppard, who, as acting admiral, commands the flagship Phoenix and the 6th fleet. As an esteemed member of the Order of Star Knights, Sheppard is gifted with unusually powerful metaphysical abilities, which he uses to help preserve the hundreds of civilizations in the universe. But there is now unrest in the universe and Sheppard and his other military officials must band together to fight a desperate alien challenge to the peaceful Alliance of Worlds. Lucky for Sheppard, he has his old mentor Garfield, and other allied Star Knights and admirals to help back him up in his fight. But as the plot thickens, the battle escalates. Now Sheppard is facing his old nemesis, the Varlon, who are sworn enemies of the Alliance of Worlds and are intent on expanding their power.

But as Sheppard grapples with the evil he already knows, he must also face a group of aliens who are new to him, the fearsome Accads, who have joined with the Varlon and who pose challenging new threats he may be ill-equipped to vanquish. The best hope for the universe is to find the Talcon Star City and gain even more allies against these forces of evil. But time is running out. Can the stalwart heroes win the battle and stop this alien onslaught or is it already too late? Caplan's sparkling prose and larger-than-life characters make Talcon Star City an incomparable reading experience. Sometimes unusual alliances are needed to combat deadly enemies, says Caplan, an idea he boldly and entertainingly illustrates. His vision of the future is filled with startling new powers and technologies, all rendered with dazzling skill and humor, from comet-like projective weapons to particle cannonballs and invisible cloaks. Drawing from his own experiences in the military, Caplan gives his futuristic tale a stunning feeling of authenticity, making the interactions between military forces and aliens as plausible and true-to-life as they are exciting and original. Meant to appeal to fans of both Battlestar Galactica and Star Trek, Talcon Star City seems destined for classic status.

Reasoning Web: Logical Foundation of Knowledge Graph Construction and Query

Answering Jeff Z. Pan, Diego Calvanese, Thomas Eiter, Ian Horrocks, Michael Kifer, Fangzhen Lin, Yuting Zhao, 2017-02-28 This volume contains some lecture notes of the 12th Reasoning Web Summer School (RW 2016), held in Aberdeen, UK, in September 2016. In 2016, the theme of the school was “Logical Foundation of Knowledge Graph Construction and Query Answering”. The notion of knowledge graph has become popular since Google started to use it to improve its search engine in 2012. Inspired by the success of Google, knowledge graphs are gaining momentum in the World Wide Web arena. Recent years have witnessed increasing industrial take-ups by other Internet giants, including Facebook's Open Graph and Microsoft's Satori. The aim of the lecture note is to provide a logical foundation for constructing and querying knowledge graphs. Our journey starts from the introduction of Knowledge Graph as well as its history, and the construction of knowledge graphs by considering both explicit and implicit author intentions. The book will then cover various topics, including how to revise and reuse ontologies (schema of knowledge graphs) in a safe way, how to combine navigational queries with basic pattern matching queries for knowledge graph, how to setup a environment to do experiments on knowledge graphs, how to deal with inconsistencies and fuzziness in ontologies and knowledge graphs, and how to combine machine learning and machine reasoning for knowledge graphs.

Astronomy Adventures and Vacations Timothy Treadwell,2017-03-29 This astronomy travel guide examines the many wonderful opportunities for experiencing the observing hobby. Amateur astronomy is often consigned to observing from home or from a local park, yet it can be much more. Tim Treadwell explores all the possibilities of astronomical and space-related activities that are

available on day trips and longer vacations. These activities range from observatory visits and other simple ways to build an astronomy event into a holiday, to full blown specialized astronomy travel. Many trips give the opportunity to visit some of the world's famous attractions. On most vacations it can be a matter of just taking a day (or night) out of your schedule to fit in an astronomy event, but larger, dedicated pilgrimages are also possible. How to make the most of astronomy potential on a holiday, whether observing on the beach in Hawaii with the Telescope Guy or visiting Star City in Russia, is covered in detail. Go to a star party, explore the national parks or see the northern lights! There are a wide variety of activities for all budgets described in this book.

Next Generation Internet of Things – Distributed Intelligence at the Edge and Human-Machine Interactions Ovidiu Vermesan, 2022-09-01 This book provides an overview of the next generation Internet of Things (IoT), ranging from research, innovation, development priorities, to enabling technologies in a global context. It is intended as a standalone in a series covering the activities of the Internet of Things European Research Cluster (IERC), including research, technological innovation, validation, and deployment. The following chapters build on the ideas put forward by the European Research Cluster, the IoT European Platform Initiative (IoT-EPI), the IoT European Large-Scale Pilots Programme and the IoT European Security and Privacy Projects, presenting global views and state-of-the-art results regarding the next generation of IoT research, innovation, development, and deployment. The IoT and Industrial Internet of Things (IIoT) are evolving towards the next generation of Tactile IoT/IIoT, bringing together hyperconnectivity (5G and beyond), edge computing, Distributed Ledger Technologies (DLTs), virtual/ and augmented reality (VR/AR), and artificial intelligence (AI) transformation. Following the wider adoption of consumer IoT, the next generation of IoT/IIoT innovation for business is driven by industries, addressing interoperability issues and providing new end-to-end security solutions to face continuous threats. The advances of AI technology in vision, speech recognition, natural language processing and dialog are enabling the development of end-to-end intelligent systems encapsulating multiple technologies, delivering services in real-time using limited resources. These developments are focusing on designing and delivering embedded and hierarchical AI solutions in IoT/IIoT, edge computing, using distributed architectures, DLTs platforms and distributed end-to-end security, which provide real-time decisions using less data and

computational resources, while accessing each type of resource in a way that enhances the accuracy and performance of models in the various IoT/IIoT applications. The convergence and combination of IoT, AI and other related technologies to derive insights, decisions and revenue from sensor data provide new business models and sources of monetization. Meanwhile, scalable, IoT-enabled applications have become part of larger business objectives, enabling digital transformation with a focus on new services and applications. Serving the next generation of Tactile IoT/IIoT real-time use cases over 5G and Network Slicing technology is essential for consumer and industrial applications and support reducing operational costs, increasing efficiency and leveraging additional capabilities for real-time autonomous systems. New IoT distributed architectures, combined with system-level architectures for edge/fog computing, are evolving IoT platforms, including AI and DLTs, with embedded intelligence into the hyperconnectivity infrastructure. The next generation of IoT/IIoT technologies are highly transformational, enabling innovation at scale, and autonomous decision-making in various application domains such as healthcare, smart homes, smart buildings, smart cities, energy, agriculture, transportation and autonomous vehicles, the military, logistics and supply chain, retail and wholesale, manufacturing, mining and oil and gas.

Sharing by Design Jeffrey Kok Hui Chan, Ye Zhang, 2020-03-16 This book answers the question of how to design a sharing system that can promote sustained, meaningful, and socially constructive sharing practices in today's cities. To do so, it constructs a framework for practical inquiry into the design of sharing systems. Further, the book invites readers to consider questions such as: If sharing can be designed, then how does one design a sharing system for cities? Which urban conditions make this sharing system possible? What are the considerations, variables, and methods that can inform and guide the designers of a sharing system? By considering both the environmental and societal

motivations for sharing, and the reality that most examples of the Sharing Economy are neither equitable in their socio-economic outcomes nor genuine in their original social promises, this book presents balanced and thoughtful answers to the questions posed above. The book will appeal to a broad readership, from students and teachers in the various design disciplines, to professionals and scholars in architecture and urbanism, business and innovation, and other related fields of the humanities and social sciences, as well as activists and policymakers committed to achieving more sustainable and equitably distributed access to urban resources.
