**Applied and Computational Historical Astronomy. Angewandte und computergestützte historische Astronomie.** Gudrun Wolfschmidt, 2021-08-26 'Computational History' derives history from data and nowadays, therefore, relies on the technologies of the digital humanities. 'Computational History of Science' addresses questions of history by evaluating historical data, e.g. for tracing back copying traditions and conclude on transfer and transformation of data and knowledge. The term 'Applied Historical Astronomy', in contrast, tries to address questions of contemporary science by evaluating historical data in comparison with most recent data. This opens new possibilities, e.g. in the search for stellar transients among historical data. In the contribution by Hoffmann & Vogt we will focus on the stellar transients among all the topics mentioned above. Philipp Protte discusses the accuracy of magnitudes and positions in ancient star catalogues, Andreas Schrimpf & Frank Verbunt present an analysis of an early modern star catalogue. Victor Reijs analyses the visibility of celestial objects for naked-eye observers, and Björn Kunzmann showcases some important variable stars in the history of astronomy. Rene Hudec presents astronomical photographic archives as a valuable data source for modern astrophysics. José M. Vaquero discusses the studies on solar observations made during the last four centuries. More technical are the contributions of Georg Zotti on Stellarium and Karsten Markus-Schnabel on data-mining and data-processing technologies. Ido Yavetz & Luca Beisel are developing a digital tool of computational history of science for the simulation of pre-modern astronomical models. Gerd Graßhoff focuses more on the application of computational history with regard to Kepler's Astronomia Nova while Tim Karberg presents an analysis of the astronomical orientation of buildings in the North Sudan.

**Super-Resolution Imaging in Biomedicine** Alberto Diaspro, Marc A. M. J. van Zandvoort, 2016-11-03 This book encompasses the full breadth of the super-resolution imaging field, representing modern techniques that exceed the traditional diffraction limit, thereby opening up new applications in biomedicine. It shows readers how to use the new tools to increase resolution in sub-nanometer-scale images of living cells and tissue, which leads to new information about molecules, pathways and dynamics. The book highlights the advantages and disadvantages of the techniques, and gives state-of-the-art examples of applications using microscopes currently available on the market. It covers key techniques such as stimulated emission depletion (STED), structured illumination microscopy

(SSIM), photoactivated localization microscopy (PALM), and stochastic optical reconstruction microscopy (STORM). It will be a useful reference for biomedical researchers who want to work with super-resolution imaging, learn the proper technique for their application, and simultaneously obtain a solid footing in other techniques.

**The Yellow Wallpaper** Charlotte Perkins Gilman,2023-03-06 Edited with a new introduction by Aimee McLaughlin The Yellow Wallpaper by American writer Charlotte Perkins Gilman, first published in January 1892, is regarded as an important early work of American feminist literature for its illustration of the attitudes towards mental and physical health of women in the 19th century. What happens when a woman is pushed too far? Is she able to express her thoughts and feelings, or is she forced towards the expectation of behaving 'normally' again soon? A woman travels with her husband to an old colonial mansion after a nervous breakdown triggered by the birth of their child. Confined to the nursery and allowed only to breathe fresh air, eat well and rest in line with a regimented 'cure', she slowly begins to unravel at the seams. Her only distraction is writing in secret – that, and the woman she begins to see trapped inside the yellow wallpaper of the room itself. Isolated and breaking apart, she sets herself a task: to free the woman, and to become one with her temporary confinement. Charlotte Perkins-Gilman's 'The Yellow Wallpaper' presents a harrowing, disturbing account of mental stress, confinement and female turmoil - within which the only available solace can be found inside four peeling, sickly yellow walls ... Our new edition also features the sequence of poems Woman by Charlotte Perkins Gilman. The gothic genre offers Gilman an effective mode of diagnosing contemporary culture whilst in tandem expressing her ensuing fears and anxieties. Gilman within this novella, gothicises the domestic setting, inverting the pillars of domesticity: family, security and understanding, in turn unveiling the dangers lurking behind the familiarity of gender roles within marital relations. The intimate first-person narration of the narrative serves to enhance Gilman's exposure of the oppressive forces of a male-dominated society, as she deplores her protagonist's inferior position in her domestic arrangement. The female narrator is encumbered by masculine superiority, undoubtedly dwelling in the middle of patriarchy. Embedded within her characterisation is the subjugated role bestowed upon Victorian women. Gilman

projects derangement onto a familiar literary figure – the middle-class wife and mother – placing the source of this madness in the inviolate sphere for dutiful women – the home. from the new introduction to *The Yellow Wallpaper* by Aimee McLaughlin
