The First 20 Hours Josh Kaufman, 2013-06-13 Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way.

Easy Ego State Interventions: Strategies for Working With Parts Robin Shapiro,2016-02-01 Quick, essential techniques to practice ego state therapy, a popular therapeutic approach. Most of us have different aspects, "parts," or "ego states" of ourselves—the silly and imaginative five-year-old part, for example, or the depressed, anxious, or angry adolescent—which manifest as particular moods, behaviors, and reactions depending on the demands of our external and internal environments. "Ego state therapy" refers to a powerful, flexible therapy that helps clients integrate and reconcile these distinct aspects of themselves. This book offers a grab bag of ego state interventions—simple, practical techniques for a range of client issues—that any therapist can incorporate in his or her practice. In her characteristic wise, compassionate, and user-friendly writing style, Robin Shapiro explains what ego states are, how to access them in clients, and how to use them for a variety of treatment issues. After covering foundational interventions for accessing positive adult states, creating internal caregivers, and working with infant and child states in Part I: Getting Started With Ego State Work, Shapiro walks

readers step-by-step through a variety of specific interventions for specific problems, each ready for immediate application with clients. Part II: Problem-Specific Interventions includes chapters devoted to working with trauma, relationship challenges, personality disorders, suicidal ideation, and more. Ego state work blends easily, and often seamlessly, with most other modalities. The powerful techniques and interventions in this book can be used alone or combined with other therapies. They are suitable for garden-variety clients with normal developmental issues like self-care challenges, depression, grief, anxiety, and differentiation from families and peer groups. Many of the interventions included in this book are also effective with clients across the dissociation spectrum—dissociation is a condition particularly well suited to ego state work—including clients who suffer trauma and complex trauma. Rich with case examples, this book is both a pragmatic introduction for clinicians who have never before utilized parts work and a trove of proven interventions for experienced hands to add to their therapeutic toolbox. Welcome to a powerful, flexible resource to help even the most difficult clients build a sense of themselves as adult, loveable, worthwhile, and competent.

Report of the Committee on Proposal Evaluation for Allocation of Supercomputing Time for the Study of Molecular Dynamics National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Proposal Evaluation for Allocation of Supercomputing Time for the Study of Molecular Dynamics, Fifth Round, 2014-09-24 This report describes the work of the Committee on Proposal Evaluation for Allocation of Supercomputing Time for the Study of Molecular Dynamics, Third Round. The committee evaluated submissions received in response to a request for proposals for biomolecular simulation time on Anton, a supercomputer specially designed and built by D.E. Shaw Research (DESRES) that allows for dramatically increased molecular dynamics simulations compared to other currently available resources. These special capabilities allow multi-microsecond to millisecond simulation timescales, which previously had been unobtainable. Over the past two years (October 1, 2010 – September 30, 2012), DESRES has made available to the noncommercial research community node-hours on an Anton system housed at the Pittsburgh Supercomputing Center, based on the advice of previous National Research Council committees convened in the fall of 2010 and 2011. The success of the program has led DESRES to make the Anton machine available for an additional 3,700,000 node-hours over the 9 months following October 2012, and DESRES asked the National Research Council to once again facilitate the allocation of time to the noncommercial research community. Report of the Committee on Proposal Evaluation for Allocation of Supercomputing Time for the Study of Molecular Dynamics, Third Round is the report of the committee's evaluation of proposals for time allocations in order to continue to facilitate breakthrough research in the study of biomolecular systems. The committee sought to continue to support research that addresses important and high impact questions demonstrating a clear need for Anton's special capabilities. The committee evaluated proposals based on scientific merit, justification for requested time allocation, and investigator qualifications and past accomplishments. This report identifies the proposals that best met the selection criteria.

Acing Standardized Tests Geetanjali Mukherjee, 2019-06-05 This book is the third in the Smarter Student series, after *Anyone Can Get An A+: How to Beat Procrastination, Reduce Stress and Improve Your Grades* and the companion workbook. I wrote this book to help students go after their dreams. Whether you want to get into your dream college, be eligible for a scholarship or pass a professional exam, I believe that the principles and strategies outlined in this book can be applied to studying for and acing any standardized test. Knowing the right way to study is an incredibly important factor in getting the most out of time spent studying. Doing well in school or

college is not dependent on whether you are the smartest kid in class or whether you spend the longest hours in the library. Instead, if you use the right study techniques, anyone can improve their grades significantly. I wrote this book for those who are facing numerous challenges while studying for a standardized test - juggling part-time or full-time work, classes, family responsibilities. Even if you have adequate time to prepare, it is an overwhelming task to prepare for such a test. This book will help you to: - learn the best techniques to study based on the latest research from psychology and neuroscience - find the best environment to study and learn what to avoid - help you use your study time effectively, so you make the most of the time you have - make a customized plan to prepare for the test that is suited to your specific needs and schedules - put you in the right mindset for preparing to take the test
