Tri-Nitro-Glycerin George M. Mowbray,2017-11-22 Excerpt from Tri-Nitro-Glycerin: As Applied in the Hoosac Tunnel, and to Submarine Blasting, Torpedoes, Quarrying, Etc Since the last edition of this work, the withdrawal of a suit and promised payment of costs by the president of the United States blasting oil company, now defunct, renders superfluous any details of the litigation I have had to sustain, in order to protect the public against an attempt to monopolize Sobrero's discovery of nitro-glycerin. And further, since it is now admitted that this explosive is the most powerful known to man, being in fact the ideal of portable force, it seemed to me I might properly omit the anecdotes of early difficulties encountered in its introduction to the Hoosac tunnel the miners' prejudices have now disappeared, and those who obstructed its use have since threatened to strike, if deprived of tri-nitro glycerin for a month, in order to institute a strict comparative test with powder; men who for thirty years lived through powder smoke, in their mining operations, declaring it unfit for a human being to endure in deep shafts or long tunnel. These omissions have enabled me to rewrite the work, to add tabulated results, and give a resume of the old world's experience and experiments with gun cotton, so that, if less interesting to the general reader, the substituted matter is perhaps of more value to the engineer, contractor and projectors of international improvements, which cannot be carried through in any reasonable period without this powerful agent. I am more than ever sensible that my exacting occupation unfits for literary success, to which this book has no pretensions. Key Technologies for Safety Construction of Mined Subsea Tunnels Dingli Zhang,2023-03-16 This book puts forward a technological system for the construction of subsea tunnel using drilling and blasting method. Taking the water-induced disaster as the core risk, the safety guarantee system for large cross-sectional subsea tunnels is established. The composite grouting technology referred to ground reinforcement and water plugging is established, which breaks through the technical bottleneck of subsea tunnel construction in highly permeable strata. The process control theory based on water inrush mechanism is created, which gets rid of the over-dependence on engineering experience for disaster control of submarine tunnel. An active control waterproof drainage system based on the synergy of reinforcement ring and support system is invented to solve the contradiction between the control of water displacement and water pressure. The above-mentioned achievements have been successfully applied in the first three large cross-sectional subsea tunnels in China, and have played a key role in the construction safety. The proposed technological system can improve the overall construction level of subsea tunnel, which can provide reference for the design and construction of subsea tunnels, especially for those crossing through weakness zones.
