SUMO Regulation of Cellular Processes Van G. Wilson, 2017-02-13 This is the second edition of a very well received book that details how the sumoylation system functions and how it modulates numerous cellular activities. SUMO is a post-translational modifier in the ubiquitin super-family that has gained recognition over the last twenty years as an essential and prevalent regulatory molecule. Individual chapters explore the biochemistry, molecular biology, and cell biology of the sumoylation system and its substrate proteins. The book is divided into three themed parts: Molecular Functions (I), Cell Growth Regulation (II), and Diseases (III). Parts I and II focus on the contribution of sumoylation to cellular activities in both the nuclear and cytoplasmic compartments. The nuclear activities covered include nucleic acid metabolism (both RNA and DNA), chromosome structure and replication, and nucleocytoplasmic transport. Cytoplasmic processes presented include

regulation of membrane ion channels, general metabolism, and apoptotic signalling. Topics in Part III include the role of sumoylation in developmental abnormalities (craniofacial and cardiovascular), diabetes, neurodegenerative diseases, cancer, and infections with viruses and bacteria. Each of the corresponding chapter authors is an active researcher who has made significant contributions to understanding sumoylation. This second edition provides updates and revisions to most of the original chapters plus adds six new chapters to address important developing areas of sumoylation research. This volume is intended for a scientific audience from undergraduates to independent researchers. The content will serve as both a solid introduction for the novice reader and an in depth treatment for the advanced scholar.

Written in the humorous, easy-to-read fashion with which the many readers of his sports column will be pleasantly familiar. Mr. Sargeant has also given us a picture of the excitement of the sport, as well as technical aspects that are apt to escape the uninitiated eye.

The key role of ubiquitination and sumoylation in signaling and cancer Hui-Kuan Lin, Wenyi Wei, Ubiquitination and Sumoylation are two important posttranslational modifications that play pivotal roles in a variety of biological functions. Although Ubiquitination is traditionally viewed as a critical mark targeting proteins for proteasome-dependent degradation, recent studies reveal that it also plays nonproteolytic functions. In contrast, Sumoylation is long thought not to target proteins for degradation, accumulating evidence suggests that it can serve a priming effect prerequisite for ubiquitination, thereby inducing protein ubiquitination and degradation. Thus, there is an important cross-talk between sumoylation and ubiquitination in determining protein fate. Deregulation in these two marks may cause aberrant activity of proteins and in turn contributes to cancer development. In this Research Topic, we accept review articles, perspectives, research articles covering any one or both of these two posttranslational

modifications in regulating diverse signal transduction pathways and providing the novel insights in unraveling the puzzle as to how they may regulate cancer progression and metastasis.

Slaves to Racism Benjamin G. Dennis, Anita K. Dennis, 2008 American racism traps Blacks OCo even in Africa. Prof. Dennis chronicles the compulsive and repetitious nature of racism and its destructive effects on peoples and societies, Dr. DennisOCOs observations of the twists of irony and misplaced pride on all sides will provoke a wry smile as well as dismay. During the 1990s, Liberia descended into civil war and anarchy. African-Liberian rebel groups roamed the countryside randomly killing as they vied for power. Doe was killed by a segment of these rebel groups and warlord Charles Taylor eventually became president in 1997. In 2003, Taylor was deposed by rebel groups and is now on trial at The Hague for war crimes. Despite Ellen Johnson-SirleafOCOs democratic election in 2005, Liberia remains in ruins as a classic failed state in Africa. The obvious question is: Why did the Negro

experiment planted in Africa in 1822 fail so miserably?. A true African-American, Dr. Dennis writes from a broad historical and social perspective having lived in an African tribe, as a Negro in the 1950s and since the Civil Rights Movement as a black man in America, having moved in international diplomatic circles and having worked as a member of the American academic elite.
