Sun Protection in Man P.U. Giacomoni,2001-07-31 Sun Protection in Man looks at the beneficial and harmful effects of solar radiation. The physiological consequences of sun exposure have been systematically studied starting at the end of the nineteenth century and we now have accumulated knowledge about how Caucasian and Asian skins reacts to solar radiation. The chemical effects of solar ultraviolet radiation have been analyzed with particular emphasis during the second half of the twentieth century. Research on micro-organisms has allowed us to understand the mechanisms of UV-induced mutagenesis and photosensitization. Studies with laboratory rodents have opened the path to the understanding of UV-induced immune-depression, carcinogenesis, photo-damage and photo-aging. The results of these studies have enabled other scientists to investigate the same phenomena in human organs such as the skin and the eye. UV radiation damages hair, as well. The present knowledge in these fields is summarized in some of the chapters of this monograph. Mass phenomenon in Europe with the generalization of summer vacations which were a consequence of social reforms introducing the concept of paid vacations. This created a need for protection and opened a market for sunscreens. This monograph is concerned with sun protection as a whole and is not just another book on sunscreens. Nonetheless, in these days of general concern, it is important to learn about the efficiency of sunscreens. Several authors discuss how to reduce the number of impinging photons and explain why sunscreens seem to offer less protection than expected. Guidelines are given on how to use sunscreens in everyday life, which are expressed rigorously though clearly, for access to the common reader. Our knowledge on the relationship between sun and humans is at the early stages of development. Industrial and commercial activities are concerned by the development of this knowledge, and rules have been and will be promulgated to guarantee efficacy and safety of sun-products. It is hoped that this monograph will be of interest to the scholar, the layman and the legislator.

Sunscreens: Development, Evaluation, and Regulatory Aspects Nicholas J. Lowe,1996-11-19 Thoroughly rewritten and enlarged, this timely Second Edition of an indispensable resource provides comprehensive coverage of the most recent advances in protecting the skin from harmful ultraviolet A (UVA) and ultraviolet B (UVB) radiation.

Sun Protection for Life Mary Mills Barrow,John F. Barrow,2005 From the founders of Coolibar, the only providers of sun protective products officially endorsed by the Skin Cancer Foundation, this book offers the latest information on detecting, preventing, and protecting yourself from damaging sun-rays that cause cancer.

Challenges in Sun Protection Christian Surber,Uli Osterwalder,2021 In the early 20th century, tanned skin was associated with good health. However, people began to protect themselves against potential overexposure to avoid sunburns. Around 1945, the first sunscreen products became available. In the years to follow, a vast number of different sunscreen filters and frameworks regulating filter substances and preparations, and methods characterizing sunscreen products were developed. The perception regarding the tasks of sunscreen products changed several times - initially it was promoted as a lifestyle product, then as a skin cancer preventive means, and more recently also for anti-aging. Different purposes and the widespread use of these products have led to myriad studies and a wealth of information. In this volume, the editors present a current collection of information analyzing and discussing issues related to sunscreen products and their use. These include challenges regarding the ideal sunscreen product including filter selection and formulation issues, measurement methods, performance characterization, safety, and regulatory issues. Further papers address topics related to the use of sunscreen products in everyday life, in vulnerable cohorts and outdoor workers. Controversial topics such as environmental effects of sunscreen products and the risks and benefits of UV radiation in the context of skin cancer, vitamin D and cardiovascular and metabolic health are also covered.

Sunscreen Photobiology: Molecular, Cellular and Physiological Aspects Francis P. Gasparro,2013-11-11 Sunscreens are universally recommended by dermatologists not only to prevent the immediate effects of overexposure to sunlight but also to prevent skin cancer. While the former goal is immediately evident, the latter remains an unproven hypothesis and is a topic of some controversy. Recent epidemiological studies suggesting a correlation between increased use of sunscreens over the past two decades and the rise in skin cancer have led to the question whether sunscreens applied to skin may be undergoing photoreactions, the effects of which are elaborated many years later. By addressing the key questions, this book advances the field of sunscreen photobiology and provides the reader with an unbiased perspective on this important field.

Cancers of the Skin R. Dummer,F.O. Nestle,G. Burg,2011-09-27 Skin cancer is the most frequent malignancy in humans and its incidence is still increasing. This situation calls for major efforts to manage the disease. Preventive measures must include reduced UV exposure and an enhanced common awareness of skin lesions. Advanced surgical techniques allow safe removal with excellent cosmetic results. In many cases alternative treatment modalities such as radiotherapy, cryosurgery and photodynamic therapy are applicable. The development of optimal sun screens and UV-protective clothes, new tools for early diagnosis of malignant lesions including videomicroscopy, improved evaluation of biopsy material and new treatment schemes will contribute to better patient care. New developments in therapy including pegylated interferons, cytokine-inducing molecules, monoclonal antibodies and vaccination approaches using peptides, dendritic cells, viruses or nDNA give hope for well-tolerated and efficient treatments.

Sun, Skin and Health Terry Slevin,2014-10 Offers current evidence on key aspects of prevention, diagnosis and treatment of skin cancer.

Sunscreens Rajesh P. Rastogi,2018 During the past few decades, the increased incidence of solar UV radiations (280-400 nm) and its harmful impacts, particularly on human skin have fueled worldwide concern to search for an effective UV sunscreen compound with the ability to provide maximum photoprotection. Several synthetic suncare products available in the international market may cause negative side effects that can't be overlooked. A number of biomolecules have been reported from different natural sources with great UV absorbing/screening functions. There is a need to explore the photoprotective role of these various natural UV sunscreens compounds so that they can find applications in UV-screening cosmetics for the benefit of human beings. The present book Sunscreens: Source, Formulations, Efficacy and Recommendations provide an overview of the current knowledge of the various sunscreens compounds along with their sources, formulations, and efficacy as well as recommendations with regard to the photoprotective function in response to intense solar radiations. This book describes the recent progress and fundamental backgrounds of various UV absorbing or sunscreens compounds derived from different sources. An effort has been made to provide substantial information on various natural sunscreens molecules and their potentials as an arsenal of effective sunscreen ingredients meant for adequate protection from harmful UV radiations. Different chapters of the book address various questions pertaining to the naturally sourced sunscreen from microorganisms to higher plants, ideal for the formulations of sun care and cosmeceutical products. Undoubtedly, the contents of the book would be highly useful for graduate/postgraduate students, teachers, biochemists, and researchers in the fields of cosmetic science, photobiology, medical microbiology, and metabolic engineers engaged in the formulations and development of broad spectrum natural sunscreens or anti-aging products.
