Landscape Painting Mitchell Albala, 2011-11-15 Because nature is so expansive and complex, so varied in its range of light, landscape painters often have to look further and more deeply to find form and structure, value patterns, and an organized arrangement of shapes. In *Landscape Painting*, Mitchell Albala shares his concepts and practices for translating nature's grandeur, complexity, and color dynamics into convincing representations of space and light. Concise, practical, and inspirational, *Landscape Painting* focuses on the greatest challenges for the landscape artist, such as:

- Simplification and Massing: Learn to reduce nature's complexity by looking beneath the surface of a subject to discover the form's basic masses and shapes.
- Color and Light: Explore color theory as it specifically applies to the landscape, and learn the various strategies painters use to capture the illusion of natural light.
- Selection and Composition: Learn to select wisely from nature's vast panorama.

Albala shows you the essential cues to look for and how to find the most promising subject from a world of possibilities. The lessons in *Landscape Painting*—based on observation rather than imitation and applicable to both plein air and studio practice—are accompanied by painting examples, demonstrations, photographs, and diagrams. Illustrations draw from the work of more than 40 contemporary artists and such masters of landscape painting as John Constable, Sanford Gifford, and Claude Monet. Based on Albala's 25 years of experience and the proven methods taught at his successful plein air workshops, this in-depth guide to all aspects of landscape painting is a must-have for anyone getting started in the genre, as well as more experienced practitioners who want to hone their skills or learn new perspectives.

Light and Color in the Outdoors Marcel Minnaert, 2012-12-06 All of science springs from the observation of nature. In this classic book, the late Professor Minnaert accompanies the reader on a tour of nature's light and color and reveals the myriad phenomena that may be observed outdoors with no more than a pair of eyes and an enquiring mind. From the intriguing shape of the dapples beneath a tree on a sunny day, via rainbows, mirages, and haloes, the colors of liquid, ice, and the sky, to the appearance of the sun, moon, planets, and stars - Minnaert describes and explains them all in a clear language accessible to laymen. This new English edition is supplemented by 80 plates, over half of them in color, taken by the acclaimed photographer Pekka Parviainen, illustrating many of the phenomena - ordinary and exotic - discussed in the book.

Measure Solar System Objects and Their Movements for Yourself! John D. Clark, 2009-04-20 Instead of taking somebody's word for it about the basic size and distance statistics for the solar system, this book shows amateur astronomers how to measure these things for themselves. This is an enriching experience for any amateur astronomer - to understand and personally measure some fundamental astronomical quantities and distances. A basic knowledge of geometry is required, but it is amazing how simple the geometry can be. Readers are led through the geometry as gently as possible - and in a light-hearted way - presuming that most non-academics will have half-forgotten most of their mathematics. The practical astronomical equipment recommended is no more than a typical commercially-made amateur telescope and a camera of some sort - these days a webcam works very well. Apart from that all the reader will need is access to a computer, the know-how to download free software, and an enthusiasm to expand his knowledge of the basis of scientific astronomy.

SOCIAL AND CULTURAL PERSPECTIVES ON BLINDNESS C. Edwin Vaughan,Fredric K. Schroeder,2018-03-01 The central idea of this book is that blindness itself results in no particular social arrangement as a cultural pattern. People are socialized to expect ideas about appropriate behavior for blind people and these vary from culture to culture. The descriptions of blindness in several different cultures are the authors’ firsthand observations as outsiders visiting different cultures interviewing individuals, as well as extensive reviewing of written sources. The text describes different perspectives regarding blindness and the social arrangements created for and by blind people. The viewpoints of blind people themselves receive prominent attention in the book. The text is critical in its perspective. Its purpose is to analyze patterns of domination and subordination as they take various forms in different cultures, including physical condition. Major discussions include: Why study rehabilitation and blindness from a cross-cultural perspective; Cultural perspectives on blindness; Producing new images about blindness; Blindness in the United States - From isolation to full inclusion; Blindness is Africa; Blind people in the Middle Kingdom and the People’s Republic of China; Spain’s unique Organizacion Nacional de Ciegos Espanoles; and the Changing culture of blindness around the world. The book strives to contribute to the social sciences and the study of behavior that is considered deviant or different. It also seeks to stimulate interest in cross-national and cross-cultural studies of blindness, and contributes to the development of a broader and richer understanding about blindness for those who provide education, rehabilitation, and employment services. Finally, the book strives to aid blind people who are reflective about their own situation and who are working to make it better.
