**SUPER SECRETO - The Third Epoch of Cryptography** Theo Tenzer, 2022-01-07 The global crisis of Privacy in the 21st century also includes discussions about the right to encryption and restrictions on so-called end-to-end encryption. In order to communicate confidentially and secure against eavesdropping, simple and practical encryption is required for everyone. But how can it be available to everyone? The magic of replacing legible characters with other apparently random and therefore illegible characters had been almost religious for centuries: only those initiated into the invention of a secret language could crack the messages. Encryption remained Super Secreto - Top Secret - Streng Geheim! In the age of smartphone and pocket computers, it is now available to everyone: ever more sophisticated math calculates the so-called cipher text with corresponding keys in our messengers. Both keys and encrypted text used to have to be transmitted to the recipient. In today's Epoch of Cryptography, the transmission of the keys is no longer necessary: The risky transport route for the keys can even be omitted! From the fascination of how Cryptography became abstinent in the transmission of keys - what effect it has on the desire of state agencies for secondary keys - and how multiple and exponential encryption makes resistant against the decryption-attempts of super-quantum-computers ... .. tells Theo Tenzer in this exciting political, technical and socially relevant innovation and science portrait on the Third Epoch of Cryptography.

**How to create a super crazy massive python projects** Samarth Goyal,2022-05-30 We present to you Moto, a smart, multi-functional virtual assistant that can easily be customized to cater the needs of the user, helping them multitask and get things done. As an exemplification if you're a software developer or a new to coding, Project Zenith can act as your coding assistant like it can create classes or functions for you at your command. It can also open basic coding related apps or websites like PyCharm, stack overflow, vs code etc and if that's not enough our voice assistant can lighten up your mood with some programming jokes. Apart from these developer specific features our voice assistant can perform a wide variety of tasks from various domains. Be it some general tasks like automating emails and WhatsApp or fun feature like horror pranks and even checking you and your partner's compatibility on Love Calculator. Jokes aside, Moto also has some real-life applications which are very relevant in today's times like Face Mask detection using TensorFlow and Facial Recognition. Our bot can do all the redundant and monotonous tasks like searching for topic on the internet, typing emails, writing boilerplate code, browsing multiple websites etc along with a set of many super-fluon's tasks, that consume the user's precious time, that otherwise could be utilized in doing some productive work. Along with several usual features found in most of the voice assistants in the market, our assistant has certain unique and state-of-the-art features like face recognition, human mood recognition, facemask-recognition, coding-helper, social-media automation, shopping automation, Messaging and Music Automation etc, that make our project in competition with the other commercial products in the market. Some downfalls of our project include, slight increase in the latency of speech recognition and also errors in the precision of the recognised speech. In conclusion, Project Zenith is still in need of a few improvements and since the project is based on open-source architecture, we expect that these issues will be resolved soon in the future.

Creating The New Internet Super Highway Book Alastair R Agutter,2015-05-15 Creating The New Internet Super Highway Book As a member of the public, business owner, developer, or programmer, you may well ask what the hell has Natural Branching and Quantum Mechanics got to do with the Web and a Virtual World. The reality is, even in a virtual world such elements are busy at work, so take a journey into the future, here and now! The Internet and World Wide Web was created and invented from a physical world of computing. Yet today using technology society operates in a Virtual World of Computer Science, and born from that has come the manifestation of a newly created Internet Super Highway and World Wide Web. This claim is not from a line, or script of a Sci-Fi Movie, but the arrival of a new era, one that exists right now, and is evolving by the day, and unbeknown to most, even to Folk in the world of Business and Development. The arrival of this new era of greater

advancement is a quantum leap in computer science, and well beyond one dimensional thinking. In 2006, I wrote a paper on the World Wide web titled The Chaos Theory of Packet Data and now today there are over 94 million web sites and counting. It was only a matter of time by understanding the realms of Natural Law could be found even within a Virtual World Quantum Mechanics and Natural Branching busy at work reaching beyond convention for a faster method of packet data delivery by flat packing the World Wide Web by stealth. I have heard many say even in my life time, how amazing it would be, to be able to look into the future. Well this book takes you there, here and now regarding the World Wide Web and the Computer Sciences. So are you ready to look into the future now! Quotation: "Even a virtual world created by technology, continues to be re-shaped by the power of Natural Law in the form of Quantum Mechanics and Natural Branching." ~ Alastair R Agutter. This book covers my notes and work, when I had a eureka moment in early 2013, and realized it was possible to create a new 'Internet Super Highway' (virtual world wide web) and one that could be a free collaboration program with any number of entities. The creating of a new higher level of the World Wide Web is a major breakthrough, as demand becomes forever greater, surrounding more users and packet data. Every web site owner, developer, student and enthusiast can embrace and adopt this new virtual world of development, for a faster and more enjoyable connectivity experience. Creating a compression inflation environment for users and new customers by adopting and understanding how photon particles can be altered to different paths and journeys, even split and using far longer distances, but defining logic with faster delivery within the realms of fractal maths. From careful research, I was also able to establish the average bounce rate of a business web site was over 40% and over 94% of all web sites are not optimized for a virtual world, their users, or browser rendering engine technology software. So by flat packing things as folk would say, and by running optimization tools and tests, I found I could change the speed of any average web site, where it would perform at least 5 to 10 times faster by my newly discovered methods in such an environment, that I regard today in comparison to all other web sites being downloaded, as super fast speed by stealth!!!
