Supernova Era Cixin Liu,2019-10-22 From science fiction legend Cixin Liu, the New York Times bestselling and award-winning author of *The Three-Body Problem*, comes a vision of the future that reads like *Lord of the Flies* on a global scale in *Supernova Era*. In those days, Earth was a planet in space. In those days, Beijing was a city on Earth. On this night, history as known to humanity came to an end. Eight light years away, a star has died, creating a supernova event that showers Earth in deadly levels of radiation. Within a year, everyone over the age of thirteen will die. And so the countdown begins. Parents apprentice their children and try to pass on the knowledge needed to keep the world running. But when the world is theirs, the last generation may not want to continue the legacy left to them. And in shaping the future however they want, will the children usher in an era of bright beginnings or final mistakes? This audacious and ultimately optimistic early work will give Liu's English-reading fans a glimpse at his evolution as a writer and give any speculative fiction reader food for deep thought. -- Shelf Awareness At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Archenemies Marissa Meyer,2018-11-06 The *Renegades* Trilogy continues, in this fiercely awaited second installment after the New York Times-bestselling *Renegades* by Marissa Meyer, author of the *Lunar Chronicles*. Now a New York Times Bestseller! Time is running out. Together, they can save the world. But they each other's worst nightmare. Nova's double life is about to get a lot more complicated: As *Insomnia*, she is a full-fledged member of the *Renegades*, a syndicate of powerful and beloved superheroes. She works with Adrian's patrol unit to protect the weak and maintain order in Gatlon City. As *Nightmare*, she is an Anarchist - a group of villains who are determined to destroy the *Renegades*. Nova wants vengeance against the so-called heroes who once failed her when she needed them most. But as Nova, her feelings for Adrian are deepening, despite the fact that he is the son of her sworn enemies and, unbeknownst to Nova, he has some dangerous secrets of his own. In this second installment of the *Renegades* trilogy, Nova, Adrian, and the rest of their crew – Ruby, Oscar, and Danna -- are faced with escalating crime in Gatlon City, while covert weapons and conflicting missions have Nova and Adrian questioning not only their beliefs about justice, but also the feelings they have for each other. The line between good and evil has been blurred, but what's clear to them both is that too much power could mean the end of their city – and the world – as they know it.

Einstein's Telescope: The Hunt for Dark Matter and Dark Energy in the Universe Evalyn Gates,2010-02-22 “Splendidly satisfying reading, designed for a nonspecialist audience.”—Kirkus Reviews, starred review Evalyn Gates, a talented astrophysicist, transports readers to the edge of contemporary science to explore the revolutionary tool—“Einstein’s telescope”—that is unlocking the secrets of the Universe. Einstein’s telescope, or gravitational lensing, is so-called for the way gravity causes space to distort and allow massive objects to act like “lenses,” amplifying and distorting the images of objects behind them. By allowing for the detection of mass where no light is found, scientists can map out the distribution of dark matter and come a step closer to teasing out the effects of dark energy on the Universe—which may forever upend long-held notions about where the Universe came from and where it is going.

Supernova Marissa Meyer,2019-11-05 All's fair in love and anarchy in *Supernova*, the epic conclusion to New York Times bestselling author Marissa Meyer's thrilling *Renegades* Trilogy This volume sees Nova and Adrian struggling to keep their secret identities concealed while the battle rages on between their alter egos, their allies, and their greatest fears come to life. Secrets, lies, and betrayals are revealed as anarchy once again threatens to reclaim Gatlon City.

The Stonekeeper: A Graphic Novel (Amulet #1) Kazu Kibuishi,2013-12-17 Kazu Kibuishi's #1 NEW YORK TIMES bestselling series is now available in eBook! Supernova Explosions David Branch,J. Craig Wheeler,2017-08-02 Targeting advanced students of astronomy and physics, as well as astronomers and physicists contemplating research on supernovae or related fields, David Branch and J. Craig Wheeler offer a modern account of the nature, causes and consequences of supernovae, as well as of issues that remain to be resolved. Owing especially to (1) the appearance of supernova 1987A in the nearby Large Magellanic Cloud, (2) the spectacularly successful use of supernovae as distance indicators for cosmology, (3) the association of some supernovae with the enigmatic cosmic gamma-ray bursts,

and (4) the discovery of a class of superluminous supernovae, the pace of supernova research has been increasing sharply. This monograph serves as a broad survey of modern supernova research and a guide to the current literature. The book's emphasis is on the explosive phases of supernovae. Part 1 is devoted to a survey of the kinds of observations that inform us about supernovae, some basic interpretations of such data, and an overview of the evolution of stars that brings them to an explosive endpoint. Part 2 goes into more detail on core-collapse and superluminous events: which kinds of stars produce them, and how do they do it? Part 3 is concerned with the stellar progenitors and explosion mechanisms of thermonuclear (Type Ia) supernovae. Part 4 is about consequences of supernovae and some applications to astrophysics and cosmology. References are provided in sufficient number to help the reader enter the literature.

Willis Wilbur Wows the World Lindsey Leavitt, 2022-03-29 Willis Wilbur has the entire summer in front of him. So it's time to fulfill his destiny: becoming the neighborhood life coach. Nine-year-old Willis Wilbur had his summer figured out. He and his best friend, Shelley, were going to Band Camp, and he was going to learn how to play the sousaphone. Easy. Simple. A done deal. But when Shelley is whisked off to Hawaii for a summer with her family, Willis is left staring down the long, boring road of an empty summer. Or even worse--eight long weeks of Day Camp. So Willis decides to try something new. He's going to MAKE A DATE WITH DESTINY. And after spotting a flyer for a local business competition, he finds exactly what his true calling really is: becoming the Neighborhood Life Coach. A kid helping other kids with kids' problems. His niche, he discovers. And he was going to be great at it. The best at it. So good, that he was going to become wildly, ridiculously famous. All he needed were some clients... With gumption, tenacity, and many other buzzwords he finds in self-help business magazines, Willis dives bowtie-first into the entrepreneurial waters. But starting a business alone, especially without his best friend by his side, is tough work. And with neighborhood bullies getting in his way, a guinea pig client who's actually a guinea pig, and an annoyingly competent little sister asking for a raise, Willis has his work cut out for him. Funny, heartfelt, and overwhelmingly endearing, Willis Wilbur is here to make all of your (well, his) dreams come true. (For a small fee.)

Supernova Or Graur, 2022-02-08 A concise illustrated introduction to the history and physics of supernovae, the brilliant explosions of stars; with striking color illustrations. Supernovae are the explosions of stars. They are some of the most energetic phenomena in the Universe, rivaling the combined light of billions of stars. Supernovae have been studied for centuries, and they have also made appearances in popular culture: a glimpse of a supernova in a painting provides Sherlock Holmes with a crucial clue, for example. In this volume in the MIT Press Essential Knowledge series, astrophysicist Or Graur offers a concise and accessible introduction to these awe-inspiring astronomical phenomena. Graur explains that a deep observational understanding of supernovae—why and how they shine and how their brightness changes over time—allows us to use them as tools for experiments in astrophysics and physics. A certain type of supernova, for example, brightens and fades in such a predictable manner that we can measure the distances to their host galaxies. We owe our existence to supernovae—they give us iron for our blood and calcium for our bones. But supernovae may also have caused a mass extinction event on Earth 2.6 million years ago. Graur shows how observations of supernovae played a role in the transformation of astronomy from astrology to astrophysics; surveys the tools used to study supernovae today; and describes the lives and deaths of stars and the supernova remnants, neutron stars, and black holes they leave behind. Illustrations in both color and black and white, many from Graur's own Hubble Space Telescope data, make this account of supernovae particularly vivid.

SPIN , 2005-01 From the concert stage to the dressing room, from the recording studio to the digital realm, SPIN surveys the modern musical landscape and the culture around it with authoritative reporting, provocative interviews, and a discerning critical ear. Hidden Human Computers: The Black Women of NASA Sue Bradford Edwards, Duchess Harris, JD, PhD, 2017-01-01 Hidden Human Computers discusses how in the 1950s, black women made critical contributions to NASA by performing calculations that made it possible for the nation's astronauts to fly into space and return safely to Earth. Aligned to Common Core Standards and correlated to state standards. Essential Library is an imprint of Abdo Publishing, a division of ABDO.

Last Day on Mars Kevin Emerson, 2017-02-14 “Last Day on Mars is thrillingly ambitious and imaginative. Like a lovechild of Gravity and The Martian, it's a rousing space opera for any age, meticulously researched and relentlessly paced, that balances action, science, humor, and most importantly, two compelling main characters in Liam and Phoebe. A fantastic start to an epic new series.” —Soman Chainani, New York Times bestselling author of the School for Good and Evil series “Emerson's writing explodes off the page in this irresistible space adventure, filled with startling plot twists, diabolical aliens, and (my favorite!) courageous young heroes faced

with an impossible task.” —Lisa McMann, New York Times bestselling author of the Unwanteds series It is Earth year 2213—but, of course, there is no Earth anymore. Not since it was burned to a cinder by the sun, which has mysteriously begun the process of going supernova. The human race has fled to Mars, but this was only a temporary solution while we have prepared for a second trip: a one-hundred-fifty-year journey to a distant star, our best guess at where we might find a new home. Liam Saunders-Chang is one of the last humans left on Mars. The son of two scientists who have been racing against time to create technology vital to humanity’s survival, Liam, along with his friend Phoebe, will be on the last starliner to depart before Mars, like Earth before it, is destroyed. Or so he thinks. Because before this day is over, Liam and Phoebe will make a series of profound discoveries about the nature of time and space and find out that the human race is just one of many in our universe locked in a dangerous struggle for survival.

Sizing Up the Universe J. Richard Gott, Robert J. Vanderbei, 2011 Using space photographs and scaled maps, demonstrates the actual size of objects in the cosmos, from Buzz Aldrin's historic footprint on the Moon to the entire visible universe, with a gatefold of the Gott-Juric Map of the Universe.

Geek Monthly ,2008-07

Stellar Collapse Chris L. Fryer, 2004-04-30 Supernovae, hypernovae and gamma-ray bursts are among the most energetic explosions in the universe. The light from these outbursts is, for a brief time, comparable to billions of stars and can outshine the host galaxy within which the explosions reside. Most of the heavy elements in the universe are formed within these energetic explosions. Surprisingly enough, the collapse of massive stars is the primary source of not just one, but all three of these explosions. As all of these explosions arise from stellar collapse, to understand one requires an understanding of the others. Stellar Collapse marks the first book to combine discussions of all three phenomena, focusing on the similarities and differences between them. Designed for graduate students and scientists newly entering this field, this book provides a review not only of these explosions, but the detailed physical models used to explain them from the numerical techniques used to model neutrino transport and gamma-ray transport to the detailed nuclear physics behind the evolution of the collapse to the observations that have led to these three classes of explosions.

Renegades Marissa Meyer, 2017-11-07 The Renegades are a syndicate of prodigies--humans with extraordinary abilities--who emerged from the ruins of a crumbled society and established peace and order where chaos reigned. As champions of justice, they remain a symbol of hope and courage to everyone--except the villains they once overthrew. Nova has a reason to hate the Renegades, and she is on a mission for vengeance. As she gets closer to her target, she meets Adrian, a Renegade boy who believes in justice--Amazon.com.

Teds Space Adventure E. Avery, 2020-04-02 Ted took a big deep breath then fired up the engines. The rocket's boosters rumbled into action like a hungry bear belly. No adventure can start without a countdown shouted Ted over the roar of the engines. 5 . . . 4 . . . 3 . . . 2 . . . 1 . . . BEAR BLAST OFF In this richly illustrated book, astronomer Elizabeth Avery takes children and their parents on an educational and exciting journey through space. In these captivating pages, a bear named Ted takes off for a trip through the solar system with his best friend--a flower named, aptly, Fleur. The pair explore our moon, and from there they head out to places no being from Earth has yet visited: our neighboring planets Mars and Venus, more distant locales like Jupiter and Saturn, and even the source of all Earth's energy, the Sun. At each stop in this winning adventure, the pair learns basic scientific facts that are presented at a level that early readers can grasp. The result is a trip that is simultaneously instructive and entertaining, an interplanetary romp that will inspire kids to follow their scientific dreams.
