Computerization Movements and Technology Diffusion Margaret S. Elliott, Kenneth L. Kraemer, 2008 Computerization movement (CM) refers to a special kind of social and technological movement that promotes the adoption of computing within organizations and society. ... Through theoretical analyses, systematic empirical studies, field-based studies, and case studies of specific technologies, the book shows CMs to be driven by Utopian visions of technology that become part of the ether within society. The empirical studies presented here show the need for designers, users, and the media to be aware that CM rhetoric can propose grand visions that never become part of a reality and reinforce the need for critical and scholarly review of promising new technologies.--Back cover.

Innovation and Disruption at the Grid's Edge Fereidoon P. The book examines the growing number of consumers engaging in self-generation and storage, and analyzes the underlying causes and drivers of change, as well as the implications of how the utility sector—particularly the distribution network—should/could be regulated. The book also explores how tariffs are set and revenues are collected to cover both fixed and variable costs in a sustainable way. This reference is useful for anyone interested in the areas of energy generation and regulation, especially stakeholders engaged in the generation, transmission, and distribution of power. Examines the new players that will disrupt the energy grid markets Offers unique coverage of an emerging and unpublished topic Helps the reader understand up-to-date energy regulations and pricing innovations
