Designing a Business Model for Mobile TV on Mobile Devices Stephen Osei-

Akoto,2018-04-26 Master's Thesis from the year 2010 in the subject Business economics - Business Management, Corporate Governance, grade: B, Aalborg University (CMI, Copenhagen Institute of Technology,), course: Masters degree in Information Communication Technology, language: English, abstract: The author studied the business model that will be suitable for deploying Mobile TV as a service to the user/customer, the market players and the providers involved in rolling out such as service. The research which was carried out in this project included finding a suitable business model to drive this service and also looking at the various technologies that is backing the mobile TV service. In order to know what pertains in Ghana and that of the outside world, the author conducted a small survey to seek the views of future and present customers of this service. Their responses were not too different from what have been reported by other surveys and analysts. During the project there was evidence that the operators and providers will need clearly defined roles in order for each member to be committed to the project and also to sustain the service. Despite the challenges outlined by experts in the industry, there is light at the end of the tunnel for Mobile TV service which is yet to be seen. The Europeans, the Americans and the Asians have already taken lead in this service and are constantly researching to make the service affordable, available, and interactive as possible and innovated than the traditional TV.

Cellular Technologies for Emerging Markets Ajay R. Mishra,2010-09-29 In this book, the author addresses technologies that are being used in emerging cellular markets. These include GSM/EGPRS and CDMA which are being deployed at a rapid pace, while technologies such as UMTS (3G)/ HSPA (3.5G) which have started to find a place in these high growth markets, are also considered. The book examines other technologies including LTE (3.9G) which have already moved out of research labs into the commercial world. 2G-CDMA is widely used, while further developments, e.g. CDMA2000 are also finding acceptance in the commercial arena. IMS/Convergence is increasingly popular all over the world; UMA, which is deployed mostly in North America; and DVB which is gaining worldwide popularity, especially in South Asia, are all reviewed. Each chapter discusses a different technology and is structured into three parts. The technology is examined at an overview level, first explaining what the technology is and then considering the technical features of the technology. The chapter concludes by looking at the planning/implementation aspects of the technology. Key Features: Useful for all cellular industry professionals as provides an overview of the currently deployed technologies in mass scale, and the forthcoming technologies that are expected to make an impact in the future, such as 4th Generation Cellular Networks. One of the first books on the market to encompass all the major cellular technologies, as well as considering the design and implementation perspective. Wireless Technology will play a key role in uplifting the economies of the Emerging countries globally. Ashok Chandra, Wireless Advisor to Govt. of India

3D and HD Broadband Video Networking Benny Bing,2010 Recent years have seen an exponential increase in video and multimedia traffic transported over the Internet and broadband access networks. This timely resource addresses the key challenge facing many service providers today: effective bandwidth management for supporting high-quality video delivery. Written by a recognized expert in the field, this practical book describes ways to optimize video transmission over emerging broadband networks. Moreover, the book explores new wireless access networks that can enable video connectivity both inside and outside the residential premise.

Mobile TV: Customizing Content and Experience Aaron Marcus,Anxo Cereijo Roibás,Riccardo Sala,2009-12-01 Developing usable, useful, and appealing solutions for the customer or user experience requires customization according to specific users' needs amidst frequently changing physical and social environments. Complex design problems like these require interdisciplinary perspectives that cover software functionality, human interaction and communication experiences, and perceived value. After defining and summarizing current research and development, this book focuses on Mobile TV experience in everyday life, innovative conceptual and participatory design methods, contextual analysis methods, social context for interactive multimedia systems, advanced interaction with mobile digital content, and future trends for the wide range of products and services that will be offered in the decade to come. The Editors have carefully balanced the theoretical and empirical approaches providing a valuable insight into principles and methods, as well as actionable guidelines and recommendations for all those interested in exploring how to achieve the core objectives of usability, usefulness, and social appeal of this new mobile-video technology. The book answers many questions, and raises some new ones that only future technology development and deployment in mobile human-computer interaction and communication can answer.

Targeted Advertising Technologies in the ICT Space Christian Schlee,2013-10-01 In recent years, the field of information and communication technology has started to change dramatically. Carriers are threatened by high revenue losses requiring them to identify new revenue potentials beyond their core business. Targeted advertising can be one of these revenue opportunities. Christian Schlee provides a broad overview of the latest developments and trends in targeted advertising in the ICT space. The author focuses on the technological aspects of targeted advertising, but also covers business and legal aspects. He analyzes the most interesting use cases in the Web, IPTV, the mobile environment, and in converged scenarios and examines important technological key building blocks.

Promotional Screen Industries Paul Grainge,Catherine Johnson,2015-03-27 From the trailers and promos that surround film and television to the ads and brand videos that are sought out and shared, promotional media have become a central part of contemporary screen life. Promotional Screen Industries is the first book to explore the sector responsible for this thriving area of media production. In a wide-ranging analysis, Paul Grainge and Catherine Johnson explore the intermediaries – advertising agencies, television promotion specialists, movie trailer houses, digital design companies – that compete and collaborate in the fluid, fast-moving world of promotional screen work. Through interview-based fieldwork with companies and practitioners based in the UK, US and China, Promotional Screen Industries encourages us to see promotion as a professional and creative

discipline with its own opportunities and challenges. Outlining how shifts in the digital media environment have unsettled the boundaries of 'promotion' and 'content', the authors provide new insight into the sector, work, strategies and imaginaries of contemporary screen promotion. With case studies on mobile communication, television, film and live events, this timely book offers a compelling examination of the industrial configurations and media forms, such as ads, apps, promos, trailers, digital shorts, branded entertainment and experiential media, that define promotional screen culture at the beginning of the twenty-first century.

After the Mobile Phone? Maren Hartmann, Patrick Rössler, Joachim Höflich, 2008-07-30 After the Mobile Phone? Social Changes and the Development of Mobile Communication is a book that looks beyond. It looks beyond in terms of the coming developments concerning mobile technologies, of changes in the mobile media markets, of new aspects of mobile media uses. Moreover, it expands existing theoretical frameworks, since it uses diverse approaches from social sciences, from media studies, from technology studies, etc. After the Mobile Phone? also goes beyond the usual work on mobile media as it looks at wider societal appropriation processes. It is an up-to-date survey of how mobile media are used, produced and imagined. The authors in this book represent a range of well-known scholars in the field. They come from diverse backgrounds and represent a number of different countries.

Digital Media Sport Brett Hutchins, David Rowe, 2013-09-05 Live broadband streaming of the 2008 Beijing Olympics accounted for 2,200 of the estimated 3,600 total hours shown by the American NBC-Universal networks. At the 2012 London Olympics, unprecedented multi-platforming embraced online, mobile devices, game consoles and broadcast television, with the BBC providing 2,500 hours of live coverage, including every competitive event, much in high definition and some in 3D. The BBC also had 12 million requests for video on mobile phones and 9.2 million browsers on its mobile Olympics website and app. This pattern will only intensify at future sport mega events like the 2014 FIFA World Cup and 2016 Summer Olympics, both of which will take place in Brazil. Increasingly, when people talk of the screen that delivers footage of their favorite professional sport, they are describing desktop, laptop, and tablet computer screens as well as television and mobile handsets. Digital Media Sport analyzes the intersecting issues of technological change, market power, and cultural practices that shape the contemporary global sports media landscape. The complexity of these related issues demands an interdisciplinary approach that is adopted here in a series of thematically-organized essays by international scholars working in media studies, Internet studies, sociology, cultural studies,

and sport studies. .
