Targeted Advertising Technologies in the ICT Space Christian Schlee, 2013-10-01 In recent years, the field of information and communication technology has started to change dramatically. Carriers are threatened by high revenue losses requiring them to identify new revenue potentials beyond their core business. Targeted advertising can be one of these revenue opportunities. Christian Schlee provides a broad overview of the latest developments and trends in targeted advertising in the ICT space. The author focuses on the technological aspects of targeted advertising, but also covers business and legal aspects. He analyzes the most interesting use cases in the Web, IPTV, the mobile environment, and in converged scenarios and examines important technological key building blocks.

Internet Technologies for Fixed and Mobile Networks Toni Janevski, 2015-11-01 The convergence of legacy telecommunications towards the Internet and Internet technologies is an ongoing process, resulting in converged Telecom and Internet worlds. Based on current and developing industry practice, this book focuses on the Internet technologies, in particular, on Internet principles, protocols, and services for fixed and mobile networks, including technologies, regulation, and business aspects. This timely resource provides readers with all-around coverage of standardized Internet technologies, Internet standardization regarding the Telecom sector, as well as the convergence of all services onto the Internet. This includes legacy telecommunication services, legacy Internet services, and emerging over-the-top services such as Skype, which appeared during the past decade on a global scale, driven by the penetration of fixed broadband and mobile broadband.

Mobile Multimedia Broadcasting Standards Fa-Long Luo,2008-11-24 Mobile multimedia broadcasting compasses a broad range of topics including radio propagation, modulation and demodulation, error control, signal compression and coding, transport and time slicing, system on chip real-time implementation in hardware, software and system levels. The major goal of this technology is to bring multimedia enriched contents to handheld devices such as mobile phones, portable digital assistants, and media players through radio transmission or internet protocol (IP) based broadband networks. Research and development of mobile multimedia broadcasting technologies are now explosively growing and regarded as new killer applications. A number of mobile multimedia broadcasting standards related to transmission, compression and multiplexing now coexist and are being extensively further developed. The development and implementation of mobile multimedia broadcasting systems are very challenging tasks and require the huge efforts of the related industry, research and regulatory authorities so as to bring the success. From an implementation design and engineering practice point of view, this book aims to be the first single volume to provide a comprehensive and highly coherent treatment for multiple standards of mobile multimedia broadcasting by covering basic principles, algorithms, design trade-off, and well-compared implementation system examples. This book is organized into 4 parts with 22 chapters.
