Evolution's Final Days: The Mounting Evidence Disproving the Theory of Evolution John Morrison,2019-03-25 The Theory of Evolution Is In a Crisis In China we can criticize Darwin, but not the government. In America, you can criticize the government, but not Darwin. - Jun-Yuan Chen (Paleontologist) In this groundbreaking book, John Morrison examines the theory of evolution being currently taught in high schools and colleges across the world. This planet was once nothing but liquid and gas and over billions of years, somehow the millions of living organisms currently here on earth came into existence, including humans ultimately descending from apes. Once the currently taught theory is understood, John then proceeds to explain what the textbooks don't teach which puts the theory of evolution in a new light. Once you're done reading Evolution's Final Days, you'll realize that the theory of evolution could never have happened in the way scientists proclaim, and the many reasons why new theories are not currently being taught. You'll understand why we need to stand up as a community, and fight for science to be taught as it was intended. And you'll come to know why the theory of evolution is truly in its final days! Whether you're new to the theory of evolution or have your PhD, this book will truly make you question what you have been told, and you'll be sure to learn new information you may have never knew existed. As a FREE bonus, only for book buyers, you'll receive my special report titled The Top 5 World Mysteries. This special report is not available to the public, or anywhere else. It exists solely as a thank you to buyers of this book. Expand your mind and learn what evolutionists don't want you to know. Social Network Data Analytics Charu C. Aggarwal,2011-03-18 Social network analysis applications have experienced tremendous advances within the last few years due in part to increasing trends towards users interacting with each other on the internet. Social networks are organized as graphs, and the data on social networks takes on the form of massive streams, which are mined for a variety of purposes. Social Network Data Analytics covers an important niche in the social network analytics field. This edited volume, contributed by prominent researchers in this field, presents a wide selection of topics on social network data mining such as Structural Properties of Social Networks, Algorithms for Structural Discovery of Social Networks and Content Analysis in Social Networks. This book is also unique in focussing on the data analytical aspects of social networks in the internet scenario, rather than the traditional sociology-driven emphasis prevalent in the existing books, which do not focus on the unique data-intensive characteristics of online social networks. Emphasis is placed on simplifying the content so that students and practitioners benefit from this book. This book targets advanced level students and researchers concentrating on computer science as a secondary text or reference book. Data mining, database, information security, electronic commerce and machine learning professionals will find this book a valuable asset, as well as primary associations such as ACM, IEEE and Management Science.

Evolution of Life Syozo Osawa,Tasuku Honjo,2012-12-06 Nearly thirty million species of organisms are believed to now live on Earth. In addition to accumulating evidence from classical biology, paleontology and earth science, the recent progress of molecular biology has provided new insights into understanding how present-day organisms have evolved with such tremendous diversity. Molecular biological studies show us that all living forms, including E. coli and human beings, derive from a single ancestor that emerged some 4 billion years ago on Earth. This volume aims to discuss the motifs of organismic evolution from the viewpoints of biogeo-interactions and diversification of the genetic systems. Based on these fundamental understandings, the last section of this volume is devoted to human evolution that includes phylogeny of man as well as evolution of human culture. Such comprehensive discussion will give us a synthesized view of the evolution of life, that is undoubtedly one of the most important problems not only for science but also for human culture in general.

The ideoplastic evolution of living species Pellegrino De Rosa,2015-06-30 This essay sets intimate relationship between evolution and mimicry. It proposes an evolutionary mechanism 'intelligent' or 'ideoplastic' called Evolutionary Plasticity or Ideoplastic evolutionism, and seeks to

present itself as a possible meeting point between positions - only apparently irreconcilable - the neodarwinian evolutionists and supporters of Intelligent Design. Particularly interesting are the observations of the bodies natural camouflage and original connections with the ipnology, plant neurobiology, quantum mechanics and the philosophical conception of Giordano Bruno. The author of this hypothesis of study, presented in 2009, is dr. Pellegrino De Rosa, an Italian agronomist, journalist and novelist.

The conference was attended by over 200 scientists from university, government and corporate laboratories from 24 different countries. The topics covered in the symposium ranged from basic physiology, biochemistry and molecular biology of plant lipids to transformation and genetic engineering of crop plants. Oil seed plants were a particular focus of the symposium. There were 62 oral and 96 posters presentations. A special lecture in memory of the founder of this series of symposium, Terry Galliard, was presented by John Shanklin. This Proceedings Book has been dedicated to Grattan Roughan for his important contributions to our knowledge of plant lipid metabolism. This volume contains manuscripts submitted from most of the presentations at the symposium. It provides a useful summary of the major fields of plant lipid studies and our present state of knowledge. The papers are arranged in eight sections covering the major areas in the field of plant physiology, biochemistry and molecular biology of plant lipids. We would like to thank Valerie Imperial, Rajesh Khetarpal and Mary Williams for their invaluable help in organizing and running the meetings and excursions. John P. Williams, Mobashsher U.
