"Listening to your mum's voice can make your day". An explorative study about the social functions of voice messages in messaging apps for international students Lisa Fritsch, 2020-01-08 Master's Thesis from the year 2019 in the subject Communications - Interpersonal Communication, grade: 1,6, European University Viadrina Frankfurt (Oder), language: English, abstract: Since 2013, voice messages can be sent using messaging services such as WhatsApp. Thus, the oral information transfer enters the digital messenger communication, which was previously exclusively based in written form. In German research of communication and linguistics, there are few scientists who have so far dealt with voice messages. They present a new challenge for the media linguistic conception of digital communication, as they fall into a gap between oral and written language utterances. The linguistics professor Katharina König emphasizes this decisive new aspect: With the integration of voice messages[...] media orality enters the non-simultaneous, quasi-synchronous messenger communication. Voice messages bring a kind of 'answering machine' option to messenger chats. How does this change digital communication? What are the social functions for the interpersonal exchange of them? These questions were investigated as part of a qualitative research, for which 20 international students between the ages of 20 and 34 were interviewed in Paris and Sofia. The selection of this sample favors the preservation of a homogeneous group of young adults in the same life situation. The research results showed that, despite the different countries of origin, the students have a similar usage of voice messages. The main benefit of voice messages is that they can be sent faster and easier and are therefore particularly practical in stressful situations. The speed allows more complex information to be recorded in less time. Furthermore, the increased emotionality through one's own voice and consequently a bigger intimacy between two chat partners, play an important role in the social functions of voice messages.

Mobile Services in Retail and Their Influence on Customer Satisfaction Joern Toellner, 2014

Startup Jerry Kaplan, 1996-10-01 Kaplan, a well-known figure in the computer industry, founded

GO Corporation in 1987, and for several years it was one of the hottest new ventures in the Valley. Startup tells the story of Kaplan's wild ride: how he assembled a brilliant but fractious team of engineers, software designers, and investors; pioneered the emerging market for hand-held computers operated with a pen instead of a keyboard; and careened from crisis to crisis without ever losing his passion for a revolutionary idea. Along the way, Kaplan vividly recreates his encounters with eccentric employees, risk-addicted venture capitalists, and industry giants such as Bill Gates, John Sculley, and Mitchell Kapor. And no one - including Kaplan himself - is spared his sharp wit and observant eye.

Handbook of Information and Communication Security Peter Stavroulakis,Mark

Stamp,2010-02-23 At its core, information security deals with the secure and accurate transfer of information. While information security has long been important, it was, perhaps, brought more clearly into mainstream focus with the so-called "Y2K" issue. The Y2K scare was the fear that computer networks and the systems that are controlled or operated by software would fail with the turn of the millennium, since their clocks could lose synchronization by not recognizing a number (instruction) with three zeros. A positive outcome of this scare was the creation of several Computer Emergency Response Teams (CERTs) around the world that now work - operatively to exchange expertise and information, and to coordinate in case major problems should arise in the modern IT environment. The terrorist attacks of 11 September 2001 raised security concerns to a new level. The international community responded on at least two fronts; one front being the transfer of reliable information via secure networks and the other being the collection of information about potential terrorists. As a sign of this new emphasis on security, since 2001, all major academic publishers have started technical journals focused on security, and every major communications conference (for example, Globecom and ICC) has organized workshops and sessions on security issues. In addition, the IEEE has created a technical committee on Communication and Information Security. The first editor was intimately involved with security for the Athens Olympic Games of 2004.
