"Listening to your mum's voice can make your day". An explorative study about the social functions of voice messages in messaging apps for international students Lisa Fritsch,2020-01-08 Master's Thesis from the year 2019 in the subject Communications - Interpersonal Communication, grade: 1,6, European University Viadrina Frankfurt (Oder), language: English, abstract: Since 2013, voice messages can be sent using messaging services such as WhatsApp. Thus, the oral information transfer enters the digital messenger communication, which was previously exclusively based in written form. In German research of communication and linguistics, there are few scientists who have so far dealt with voice messages. They present a new challenge for the media linguistic conception of digital communication, as they fall into a gap between oral and written language utterances. The linguistics professor Katharina König emphasizes this decisive new aspect: With the integration of voice messages[...] media orality enters the non-simultaneous, quasi-synchronous messenger communication. Voice messages bring a kind of 'answering machine' option to messenger chats. How does this change digital communication? What are the social functions for the interpersonal exchange of them? These questions were investigated as part of a qualitative research, for which 20 international students between the ages of 20 and 34 were interviewed in Paris and Sofia. The selection of this sample favors the preservation of a homogeneous group of young adults in the same life situation. The research results showed that, despite the different countries of origin, the students have a similar usage of voice messages. The main benefit of voice messages is that they can be sent faster and easier and are therefore particularly practical in stressful situations. The speed allows more complex information to be recorded in less time. Furthermore, the increased emotionality through one's own voice and consequently a bigger intimacy between two chat partners, play an important role in the social functions of voice messages.

Startup Jerry Kaplan,2014-07-08 The classic account of the early days of tech, named one of the 10 best business books of the year by Business Week: "Riveting, wry, and often wise."—The Washington Post Jerry Kaplan had a dream: he would redefine the known universe (and get very rich) by creating a new kind of computer. All he needed was sixty million dollars, a few hundred employees, and a maniacal belief in his ability to win the Silicon Valley startup game. Kaplan, a well-known figure in the computer industry, founded GO Corporation in 1987, and for several years it was one of the hottest new ventures in the Valley. Startup tells the story of Kaplan's wild ride: how he assembled a brilliant but fractious team of engineers, software designers, and investors; pioneered the emerging market for hand-held computers operated with a pen instead of a keyboard; and careened from crisis to crisis without ever losing his passion for his revolutionary idea.

Along the way, Kaplan vividly recreates his encounters with eccentric employees, risk-addicted venture capitalists, and industry giants such as Bill Gates and John Sculley. And no one—including Kaplan himself—is spared his sharp wit. "What separates Kaplan's tale from other start-up stories is the insight he provides about dealing with two of America's largest computer companies—IBM and Microsoft...Readers interested in entrepreneurial adventurism will find Kaplan's tale entertaining."—Publishers Weekly "Kaplan tells it with novelistic style replete with races against the clock and sharp character sketches...An insider's well-written story of the death of a new machine."—Kirkus Reviews "A winner."—Wired

Handbook of Information and Communication Security Peter Stavroulakis,Mark Stamp,2010-02-23 At its core, information security deals with the secure and accurate transfer of information. While information security has long been important, it was, perhaps, brought more clearly into mainstream focus with the so-called "Y2K" issue. Te Y2K scare was the fear that c- puter networks and the systems that are controlled or operated by sofware would fail with the turn of the millennium, since their clocks could lose synchronization by not recognizing a number (instruction) with three zeros. A positive outcome of this scare was the creation of several Computer Emergency Response Teams (CERTs) around the world that now work - operatively to exchange expertise and information, and to coordinate in case major problems should arise in the modern IT environment. Te terrorist attacks of 11 September 2001 raised security concerns to a new level. Te - ternational community responded on at least two fronts; one front being the transfer of reliable information via secure networks and the other being the collection of information about - tential terrorists. As a sign of this new emphasis on security, since 2001, all major academic publishers have started technical journals focused on security, and every major communi- tions conference (for example, Globecom and ICC) has organized workshops and sessions on security issues. In addition, the IEEE has created a technical committee on Communication and Information Security. Te ?rst editor was intimately involved with security for the Athens Olympic Games of 2004.

Services Marketing and Management Audrey Gilmore,2003-05-15 Services Marketing and Management provides an in-depth consideration of how services are conceptualized, designed and managed, creating the basis for a clear understanding of the multi-dimensional aspects of services. Unlike many textbooks on services marketing this book puts services management and delivery in context. Firstly, it explores the effect of organizational structures, management styles, internal marketing and management competencies on service management decision making and implementation. Secondly, Services Marketing and Management considers detailed examples of not-for-profit and for-profit service organizations and service delivery. Finally, this text addresses contemporary issues for services managers and speculates on some of the challenges for the future of services marketing. This textbook is designed for postgraduate and MBA students of services management and services marketing courses as well as undergraduates.
