Pluto Rocket: Joe Pidge Flips a Lid (Pluto Rocket #2) Paul Gilligan,2023-10-24 Pluto Rocket and Joe Pidge are back, with more hats and hijinks than ever before, in the second book of this hilarious new early graphic novel series, for fans of Narwhal and Jelly and Pizza and Taco! Joe Pidge, king

of the neighborhood, and Pluto Rocket, an alien who's new in town, have become fast friends, with Joe acting as Pluto's guide on her secret mission to discover what life in the neighborhood is really like. Pluto encourages Joe to get out of his comfort zone, but Joe delays by creating an outlandish list of supplies they'll need to get before they go! Is Joe Pidge afraid of leaving his safe little neighborhood? And if that's tough, imagine how Joe feels when his hat, his trademark super-flavio look that helps him stand out from the other pigeons, goes missing. Thankfully, Pluto is here to help save the day in the second book of this hilarious graphic novel series from Paul Gilligan, creator of the syndicated comic strip Pooch Cafe!

Three Things You Need to Know About Rockets Jessica A. Fox, 2013-08-27 In this inspiring, delightful memoir, a young woman decides to escape the daily grind and turn her “what if” fantasy into a reality, only to find work—and a man—she loves in one fell swoop, all in a secondhand bookstore in a quaint Scottish town. Jessica Fox was living in Hollywood, an ambitious 26-year-old film-maker with a high-stress job at NASA. Working late one night, craving another life, she was seized by a moment of inspiration and tapped “second hand bookshop Scotland” into Google. She clicked the first link she saw. A month later, she arrived 2,000 miles across the Atlantic in Wigtown, on the west coast of Scotland, and knocked on the door of the bookshop she would be living in for the next month . . . The rollercoaster journey that ensued—taking in Scottish Hanukkah, yoga on Galloway’s west coast, and a waxing that she will never forget—would both break and mend her heart. It would also teach her that sometimes we must have the courage to travel the path less taken. Only then can we truly become the writers of our own stories.

History of Liquid Propellant Rocket Engines George Paul Sutton, 2006 Liquid propellant rocket engines have propelled all the manned space flights, all the space vehicles flying to the planets or deep space, virtually all satellites, and the majority of medium range or intercontinental range ballistic missiles.

Rap to Mars Dr. Oliver Akamnonu, 2012-01-23 Rap to Mars, a book of poetry, satire, and prose, attempts by words and art to dissect and sift through diverse aspects of the life of man in his quest to assert himself as the king or queen of the universe. This is even in spite of man's obvious lapses, frailties, and entrapment. During the course of various attempts, sometimes, success smiles on man. But when failures present themselves,

arrogant and deceitful man refuses to accept his obvious limitations. Often, in his ever-willing efforts to deceive the more gullible, man in his cowardice plays the monkey that uses the cat's paws to extract nuts from the fire. From a safe distance, the minion, man, details his more gullible fellow men to sacrifice themselves and others in silly and assumed defense of the Almighty Maker. The martyr and suicide bomber along with their victims become the willing and unwilling by-products. But even in spite of his sometimes comical shenanigans, man, who unsuccessfully plays the angel on Earth, remains man and suffers or causes others to suffer the pains arising from a perpetual struggle between the good and the bad as represented in Rap to Mars by Earth's angels, suicide bombers, and whores. At the end of the day, man, mere mortal man, still finds himself trapped in his self-imposed cocoon of a shanty or a mansion. In the latter, man again plays the elitist parent of a lone child while the downtrodden find their pleasure by doggedly obeying the injunction of increase and multiply. Rap to Mars is a mixed grill of fun, challenges, and what the evolving society was, what it is, and what it should fight hard not to be.

Rocket Propulsion Stephen D. Heister, William E. Anderson, Timothée L. Pourpoint, R. Joseph Cassady, 2019-02-07 A modern pedagogical treatment of the latest industry trends in rocket propulsion, developed from the authors' extensive experience in both industry and academia. Students are guided along a step-by-step journey through modern rocket propulsion, beginning with the historical context and an introduction to top-level performance measures, and progressing on to in-depth discussions of the chemical aspects of fluid flow combustion thermochemistry and chemical equilibrium, solid, liquid, and hybrid rocket propellants, mission requirements, and an overview of electric propulsion. With a wealth of homework problems (and a solutions manual for instructors online), real-life case studies and examples throughout, and an appendix detailing key numerical methods and links to additional online resources, this is a must-have guide for senior and first year graduate students looking to gain a thorough understanding of the topic along with practical tools that can be applied in industry.

Nanomaterials in Rocket Propulsion Systems Qi-Long Yan, Guo-Qiang He, Pei-Jin Liu, Michael Gozin, 2018-10-16 Nanomaterials in Rocket Propulsion Systems covers the fundamentals of nanomaterials and examines a wide range of innovative applications, presenting the current state-of-the-art in the field. Opening with a chapter on nano-sized energetic materials, the book examines metal nanoparticles-based fuels, ballistic modifiers, stabilizers and catalysts as the components of rocket propellants. Hydrogen storage materials for rocket propulsion based on nanotubes are then discussed, as are nano-porous materials and metal organic frameworks, nano-gelled propellants, nano-composite ablators and ceramic nano-composites. Other applications examined include high thermal conductivity metallic nano-composite nozzle liners, nano-emitters for Coulomb propulsion of space-crafts, and highly thermostable nano-ceramics for rocket motors. The book finishes with coverage of combustion of nano-sized rocket fuels, nano-particles and their combustion in micro- and nano-electromechanical systems (MEMS/NEMS), plasma propulsion and nano-scale physics. Users will find this to be a valuable resource for academic and government institutions, professionals, new researchers and graduate students working in the application of nanomaterials in the aerospace industry. Provides a detailed overview of different types of nanomaterials used in rocket propulsion, highlighting different situations in which different materials are used Demonstrates the use of new nanomaterial concepts, allowing for an increase in payload capacity or a decrease in launch mass Explores a range of applications using metal nanopowders, presenting a panorama on cutting-edge, technological developments
