Tasks for Language Teachers Martin Parrott,1993-05-13 This book contains 40 tasks of two types: discussion tasks and classroom-based tasks.

Tasks Galore for the Real World Laurie Eckenrode,Pat Fennell,Kathy Hearsey,2004 Tasks Galore for the Real World features over 240 full-color photos of highly organized, multi-modal tasks that emphasize the functional skills needed for daily living. Each task includes visual strategies that enhance independence in the home, school, community, and workplace. Contemporary Task-Based Language Teaching in Asia Michael Thomas,Hayo Reinders,2015-02-26 Over the last decade task-based approaches to language learning and teaching (TBLT) have become a global focus of increased levels of research. Governments around the world have turned to TBLT as a potential solution for curricula that lack authentic and meaningful engagement with language learning and are failing to motivate students as a result. This book focuses on Asia, where this shift has been particularly in evidence. TBLT has often been implemented in top-down approaches to curriculum development, which presents a huge range of challenges at the cultural as well as the pedagogic level. Contemporary Task Based Language Teaching in Asia looks at the drivers, stakeholders and obstacles across the region. Some countries have adapted TBLT to deal with the local constraints, others have found it hard to apply and many are still in the process of investigating its implementation in their specific contexts. This collection is important to all involved in language development, from curriculum reform to materials development. It assists from programme evaluation to the setting of assessment standards. The chapters cover all aspects of language education across Asia, from primary to tertiary, private and public education, as well as innovations at local, regional and national levels.

Task Switching and Cognitive Control James Grange,George Houghton,2014-04-25 One thing that separates human beings from the rest of the animal world is our ability to control behavior by referencing internal plans, goals, and rules. This ability, which is crucial to our success in a complex social environment, depends on the purposeful generation of task sets--states of mental readiness that allow each of us to engage with the world in a particular way or achieve a particular aim. This book reports the latest research regarding the activation, maintenance, and suppression of task sets. Chapters from many of the world's leading researchers in task switching and cognitive control investigate key issues in the field, from how we select the most relevant task when presented with distracting alternatives, to how we maintain focus on a task (eyes on the prize) and switch to a new one when our goals or external circumstances change. Chapters also explore the brain structures responsible for these abilities, how they develop during childhood, and whether they decline due to normal aging or neurological disorders. Of interest especially to scholars and students of cognitive psychology, the volume offers thorough, multi-disciplinary coverage of contemporary research and theories concerning this fundamental yet mysterious aspect of human brain function and behavior.

Multitasking: Executive Functioning in Dual-Task and Task Switching Situations Tilo Strobach,Mike Wendt,Markus Janczyk,2018-03-27 Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e., dual tasking) or executing multiple tasks in varying sequences (i.e., task switching). In the literature, numerous attempts have aimed at theorizing

about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active component of task-sets in these situations. However, these approaches have been rather vague regarding explanatory concepts (e.g., task-set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/ or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual-task and task switching situations. The contributions specify these executive functions by focusing on (1) fractionating assumed mechanisms into constituent subcomponents, (2) their variations by age or in clinical subpopulations, and/ or (3) their plasticity as a response to practice and training.

Task-Based Language Teaching in Foreign Language Contexts Ali Shehadeh, Christine A. Coombe, 2012 This volume extends the Task-Based Language Teaching: Issues, Research and Practice books series by deliberately exploring the potential of task-based language teaching (TBLT) in a range of EFL contexts. It is specifically devoted to providing empirical accounts about how TBLT practice is being developed and researched in diverse educational contexts, particularly where English is not the dominant language. By including contributions from settings as varied as Japan, China, Korea, Venezuela, Turkey, Spain, and France, this collection of 13 studies provides strong indications that the research and implementation of TBLT in EFL settings is both on the rise and interestingly diverse, not least because it must respond to the distinct contexts, constraints, and possibilities of foreign language learning. The book will be of interest to SLA researchers and students in applied linguistics and TESOL. It will also be of value to course designers and language teachers who come from a broad range of formal and informal educational settings encompassing a wide range of ages and types of language learners.

The Role of the Learner in Task-Based Language Teaching Craig Lambert, Scott Aubrey, Gavin Bui, 2023-05-03 This comprehensive, forward-looking text is the first holistic research overview and practical methods guide for researching the role that affective and conative factors play in second language learners' task performance and language acquisition. It provides a long overdue update on the role of the learner in task-based language teaching (TBLT). The book brings together theoretical background and major constructs, established and innovative methodological and technological tools, cutting-edge findings, and illuminating suggestions for future work. A group of expert scholars from around the world synthesize the state of the art, detail how to design and conduct empirical studies, and authoritatively set the agenda for future work in this critical, emerging area of language learning and instructional design. With a variety of helpful features like suggested research, discussion questions, and recommended further readings, this will be an invaluable resource to advanced students and researchers of second language acquisition, applied linguistics, psychology, education, and related areas.

Classroom Observation Tasks Ruth Wajnryb, 1992 Classroom Observation Tasks shows how to use observation to learn about language teaching. It does this by providing a range of tasks which guide the user through the process of observing, analysing and reflecting, and which develop the skills of observation. The book contains a bank of 35 structured tasks which are grouped into seven areas of focus: the learner, the language, the learning process, the lesson, teaching skills and strategies, classroom management, and materials and resources. Each task looks at one aspect of a particular area; for example, the language a teacher uses to ask questions, or how the teacher monitors learning, or how people interact in a lesson. Each task provides guidance in how to record observations, and

questions to help users interpret the data and relate the experience to their own teaching circumstances and practice. [This book]: a- is addressed mainly to teachers, but also caters for trainee teachers, teacher trainers and others involved in school-based teacher support, teacher development and trainer training; b- has a comprehensive introduction to the tasks and a rationale covering the theoretical issues involved; and c- places the responsibility for professional growth in the hands of the teacher. -- Back cover.

Tasks in Second Language Learning Virginia Samuda,Martin Bygate,2007-11-27 Tasks in Second Language Learning aims to re-centre discussion of the ways in which language learning tasks can help offer a holistic approach to language learning, and to explore the research implications. It relates the broad educational and social science rationale for the use of tasks to the principles and practices of their classroom use. The authors provide a balanced review of research as a basis for exploring a broader research agenda. Throughout, the book offers telling illustration of the contributions of a range of specialists in research, teaching methodology and materials development, and of the authors' own argument.

Interactive Tasks Michael Leaser,Justin White,2015-09-16 This module on interactive tasks provides teachers with an overview of the nature of communication and explores the ways in which interactive tasks can promote communicative exchanges among students and teachers. Interactive Task Learning Kevin A. Gluck,John E. Laird,2019-08-16 Experts from a range of disciplines explore how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. Humans are not limited to a fixed set of innate or preprogrammed tasks. We learn quickly through language and other forms of natural interaction, and we improve our performance and teach others what we have learned. Understanding the mechanisms that underlie the acquisition of new tasks through natural interaction is an ongoing challenge. Advances in artificial intelligence, cognitive science, and robotics are leading us to future systems with human-like capabilities. A huge gap exists, however, between the highly specialized niche capabilities of current machine learning systems and the generality, flexibility, and in situ robustness of human instruction and learning. Drawing on expertise from multiple disciplines, this Strüngmann Forum Report explores how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. The contributors consider functional knowledge requirements, the ontology of interactive task learning, and the representation of task knowledge at multiple levels of abstraction. They explore natural forms of interactions among humans as well as the use of

interaction to teach robots and software agents new tasks in complex, dynamic environments. They discuss research challenges and opportunities, including ethical considerations, and make proposals to further understanding of interactive task learning and create new capabilities in assistive robotics, healthcare, education, training, and gaming.
