Improving the Tax System amid the Rule-of-Law China Qiao Wang, Weiqun Xi, 2022-02-16 This book discusses China's tax system, presenting a comprehensive and systematic research based on a multidisciplinary approach involving economics, finance, political science, sociology, law, public administration, history, and econometrics. With China moving toward the rule of law, this book proposes reforms to the tax laws and the stratified governance with a view to achieving tax neutrality, law-based taxation, tax equality and tax burden stability. It focuses on clarifying the implications, extension, nature, and features of a law-based tax system as well as the logical relationships between the optimization of the tax system structure, modern governance, law-based tax administration, as well as the tax-sharing system of tax collection and the rule of tax law. It suggests that optimizing the tax structure, reforming the tax-sharing system, improving local taxes, and restructuring the tax collection and management system will push China's tax system toward sound design and rule of law. This book is intended for scholars specializing in China's tax system and general readers interested in China's economy.

Sustainable Industrial Design and Waste Management Salah El Haggar, 2010-07-28 Sustainable Industrial Design and Waste Management was inspired by the need to have a text that enveloped awareness and solutions to the ongoing issues and concerns of waste generated from industry. The development of science and technology has increased human capacity to extract resources from nature and it is only recently that industries are being held accountable for the detrimental effects the waste they produce has on the environment. Increased governmental research, regulation and corporate accountability are digging up issues pertaining to pollution control and waste treatment and environmental protection. The traditional approach for clinical waste, agricultural waste, industrial waste, and municipal waste are depleting our natural resources. The main objective of this book is to conserve the natural resources by approaching 100 % full utilization of all types of wastes by cradle – to - cradle concepts, using Industrial Ecology methodology documented with case studies. Sustainable development and environmental protection cannot be achieved without establishing the concept of industrial ecology. The main tools necessary for establishing Industrial Ecology and sustainable development will be covered in the book. The concept of "industrial ecology

will help the industrial system to be managed and operated more or less like a natural ecosystem hence causing as less damage as possible to the surrounding environment. Numerous case studies allow the reader to adapt concepts according to personal interest/field Reveals innovative technologies for the conservation of natural resources The only book which provides an integrated approach for sustainable development including tools, methodology, and indicators for sustainable development

The Green Paradox Hans-Werner Sinn, 2012-02-03 A leading economist develops a supply-side approach to fighting climate change that encourages resource owners to leave more of their fossil carbon underground. The Earth is getting warmer. Yet, as Hans-Werner Sinn points out in this provocative book, the dominant policy approach—which aims to curb consumption of fossil energy—has been ineffective. Despite policy makers' efforts to promote alternative energy, impose emission controls on cars, and enforce tough energy-efficiency standards for buildings, the relentlessly rising curve of CO2 output does not show the slightest downward turn. Some proposed solutions are downright harmful: cultivating crops to make biofuels not only contributes to global warming but also uses resources that should be devoted to feeding the world's hungry. In The Green Paradox, Sinn proposes a new, more pragmatic approach based not on regulating the demand for fossil fuels but on controlling the supply. The owners of carbon resources, Sinn explains, are preempting future regulation by accelerating the production of fossil energy while they can. This is the "Green Paradox": expected future reduction in carbon consumption has the effect of accelerating climate change. Sinn suggests a supply-side solution: inducing the owners of carbon resources to leave more of their wealth underground. He proposes the swift introduction of a "Super-Kyoto" system—gathering all consumer countries into a cartel by means of a worldwide, coordinated capand-trade system supported by the levying of source taxes on capital income—to spoil the resource owners' appetite for financial assets. Only if we can shift our focus from local demand to worldwide supply policies for reducing carbon emissions, Sinn argues, will we have a chance of staving off climate disaster.

Climate Change Policy Dieter Helm, 2005-05-05 The threat posed by climate change has not yet been matched by international agreements and economic policies that can deliver sharp reductions in greenhouse-gas emissions. Although the Kyoto Protocol has now been ratified by Russia and hence come into legal effect, the USA, China, and India are all outside its emissions caps. Few European countries are on course to meet their own national targets, and even if fully implemented, it is widely acknowledged that the Kyoto Protocol would make little difference to the carbon concentrations in the atmosphere. In consequence, there is a search for a post-Kyoto framework, new institutions, and new economic policies to spread the costs and meet them in an economically efficient way. Carbon taxes and emissions trading are, in particular, being established in a number of developing countries. This volume provides an accessible overview of the economics of climate change, the policy options, and the scope for making significant carbon reductions.

Climate Change 1995: Economic and Social Dimensions of Climate Change Hoe-sŏng Yi,Intergovernmental Panel on Climate Change. Working Group III.,1996-06-27 The consequences of climate change for society are analysed in this landmark assessment from the IPCC. This book assesses the available knowledge on the many issues that society has to face, including the international decision-making framework; applicability to climate change of techniques for assessing

costs and benefits; the significant social costs of projected climate change; and the economic assessment of policy instruments to combat climate change, nationally and internationally. Some important conclusions of this Second Assessment Report indicate that 10 to 30% of greenhouse gas emissions in most countries can be reduced at negative or zero cost - 'no regrets' measures. Also, the literature indicates that climate change will cause aggregate net damage, which provides an economic rationale for going beyond 'no regrets' measures. It also indicates that a portfolio of mitigation, adaptation and research measures is a sound strategy for addressing climate change given the remaining uncertainties. This report speaks directly to the issues that are faced by the many countries committed to limit emissions of greenhouse gases by the year 2000, and currently negotiating actions to be taken beyond that date. Will be of great value to the international community of policymakers interested in the consequences of climate change, as well as to economists, social and natural scientists.
