Professional Development for In-Service Teachers Chrystalla Mouza,Anne Ottenbreit-Leftwich,Aman Yadav,2022-07-01 Computer science is increasingly becoming an essential 21st

century skill. As school systems around the world recognize the importance of computer science, demand for teachers who have the knowledge and skills to deliver computer science instruction is rapidly growing. Yet a number of recent studies indicate that teachers report low confidence and limited understanding of computer science, frequently confusing basic computer literacy skills with computer science. This is true for both teachers at the K-8 level as well as secondary education teachers who frequently transition to computer science from other content areas, such as mathematics. As computer science is not yet included in most teacher preparation programs, professional development is a critical step in efforts to prepare in-service teachers to deliver high-quality computer science instruction. To date, however, research on best practices in computer science professional development has been severely lacking in the literature, making it difficult for researchers and practitioners alike to examine effective in-service preparation models. This book provide examples of professional development approaches that help teachers integrate aspects of computing in existing curricula at the K-8 level or deliver stand-alone computer science courses at the secondary school level. Further, this book identifies computational competencies for teachers, promising pedagogical strategies that advance teacher learning, as well as alternative pathways for ongoing learning including microcredentials. The primary audience of the book is graduate students and faculty in educational technology, educational or cognitive psychology, learning theory, curriculum and instruction, computer science, instructional systems and learning sciences. Additionally, the book will serve as a valuable addition to education practitioners and curriculum developers as well as policy makers looking to increase the number of teachers who are prepared to deliver computing education.

From what should be taught to how to pay for education to how to keep kids safe in schools, impassioned debates emerge and mushroom, both within the scholarly community and among the general public. This volume in the point/counterpoint *Debating Issues in American Education* reference series tackles the topic of technology in schools. Fifteen to twenty chapters explore such varied issues as the digital divide, electronic textbooks, impacts on curricula, privacy on school computers, web censorship, and more. Each chapter opens with an introductory essay by the volume editor, followed by point/counterpoint articles written and signed by invited experts, and concludes with Further Readings and Resources, thus providing readers with views on multiple sides of technology issues within America's schools and pointing them toward more in-depth resources for further exploration.
