An Investigation into Authentication Security of GSM algorithm for Mobile Banking Ali Raheem, 2014-02-01 Due to the mobility of its users, GSM systems are vulnerable to an unauthorized access and eaves droppings when compared with the traditional fixed wired networks. The main idea of this project is to develop an application device in order to secure mobile banking over unsecure GSM network. It is important to mention that mobile banking is a term that is used for performing balance checks, account transactions, payments, credit applications, and many other online applications. Unfortunately, the security architecture for cellular network is not entirely secure. As a matter of fact, GSM network infrastructure is proved to be insecure. Many possible attacks are documented in literature. For security was never considered in the initial stages, the sending of protective banking information across an open mobile phone network remains insecure. Consequently, this project focuses entirely on the development and design of security techniques in order to asses some security issues within mobile banking through cellular phone network (GSM). The main aim of this project is to investigate and examine the following: 1. Security issues in each level of the mobile network architecture. 2. Messages and signals exchanged between user's cellular phone and mobile network at each level. 3. The overall security architecture of GSM flaws. 4. Some existing security measures for mobile transactions. 5. The current security within SMS banking and GPRS banking. Finally, two folded simulations in MATLAB were performed

using OFDM which is a broadband multicarrier modulation method that provides a high performance operation to transmitted and received data or information.

Marketing and Mobile Financial Services Aijaz A. Shaikh, Heikki Karjalainen, 2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

Mobile Apps and Banking Paulina Nolan, 2014 Through a variety of new mobile applications (apps), technology is rapidly changing the way consumers shop. Today's mobile apps offer new beneficial services designed to enhance the consumer shopping experience. These apps allow smartphone users to compare competing products and retailers in real-time, seek out the best deals, and pay for their purchases by waving their phones at the checkout counter. Many of these apps have been installed on millions of devices, and all use mobile technology to alter consumers' shopping. Mobile payments can be a convenient way for consumers to pay for goods and services but they also raise consumer protection concerns. This book examines the mobile payments industry and its effects on consumers, while exploring areas where more attention is warranted such as dispute resolution, data security, and privacy.
