THE LIFE AND THOUGHT OF LOUIS LOWY Lorrie Gardella,2011-10-18 Louis Lowy (1920–1991), an international social worker and gerontologist, rarely spoke publicly about the Holocaust. During the last months of his life, however, he recorded an oral narrative that explores his activities during the Holocaust as the formative experiences of his career. Whether caring for youth in concentration camps, leading an escape from a death march, or forming the self-government of a Jewish displaced persons center, Lowy was guided by principles that would later inform his professional identity as a social worker, including the values of human worth and self-determination, the interdependence of generations, and the need for social participation and lifelong learning. Drawing on Lowy’s oral narrative and accounts from three other Holocaust survivors who witnessed his work in the Terezin ghetto and the Deggendorf Displaced Persons Center, Gardella offers a rich portrait of Lowy’s personal and professional legacy. In chronicling his life, Gardella also uncovers a larger story about Jewish history and the meaning of the Holocaust in the development of the social work profession.

ADVANCES IN MACHINE VISION: STRATEGIES AND APPLICATIONS COLIN ARCHIBALD,EMIL PETRIU,1992-04-15 This book describes recent strategies and applications for extracting useful information from sensor data. For example, the methods presented by Roth and Levine are becoming widely accepted as the ‘best’ way to segment range images, and the neural network methods for alpha-numeric character recognition, presented by K Yamada, are believed to be the best yet presented. An applied system to analyze the images of dental imprints presented by J C T , et al. is one of several examples of image processing systems that have already been proven to be practical, and can serve as a model for the image processing system designer. Important aspects of the automation of processes are presented in a practical way which can provide immediate new capabilities in fields as diverse as biomedical image processing, document processing, industrial automation, understanding human perception, and the defence industries. The book is organized into sections describing Model Driven Feature Extraction, Data Driven Feature Extraction, Neural Networks, Model Building, and Applications.
