*The Mixed Blessing of Financial Inflows* International Institute for Applied Systems Analysis, 1999 Eight papers assess the role of foreign capital inflows in the economies of countries in Latin America, Asia, and the former Communist countries. Recent experiences are explored and appropriate policies are suggested. The authors conclude that the policy dilemmas faced by formerly centrally planned economies are similar to those in other developing economies. However, certain unique characteristics such as data limitations and the fragility of the banking and financial systems compound the problems faced by policymakers in Central and Eastern Europe.
