Automatic Generation of Combinatorial Test Data Jian Zhang, Zhiqiang Zhang, Feifei Ma, 2014-09-15 This book reviews the state-of-the-art in combinatorial testing, with particular emphasis on the automatic generation of test data. It describes the most commonly used approaches in this area - including algebraic construction, greedy methods, evolutionary computation, constraint solving and optimization - and explains major algorithms with examples. In addition, the book lists a

number of test generation tools, as well as benchmarks and applications. Addressing a multidisciplinary topic, it will be of particular interest to researchers and professionals in the areas of software testing, combinatorics, constraint solving and evolutionary computation.

Design and Implementation of Combinatorial Testing Based Test Suites for Operating Systems Used for Internet of Things Abhinandan H Patil, 2019-07-13 Regression test selection, augmentation, prioritizing and pruning are the areas in which significant amount of research work has already been done. In spite of this, in few cases, testing is done in non-methodical manner by selecting a few important parameters and their combinations. It is possible to take a more rigorous approach to this problem using the combinatorial testing approach. Despite the advantages of such an approach, this approach has not been used in many cases where it is needed. This Thesis presents a practical approach to applying combinatorial testing and augment the base regression test suite of Contiki and Cooja with National Institute of Standards Technology (NIST) tools. We share the results of use of combinatorial testing for Contiki and Cooja regression test suite. Our work looks at the existing regression test suite and studies its inadequacies. We then incorporate additional tests as part of re-engineering of the existing test suite using Automated Combinatorial Testing for Software (ACTS) tool. Test suite was written from scratch for the Cooja simulator of Contiki Operating system. In each case we measured the coverage in Contiki simulator. We report on the automation of test case generation for Contiki and Cooja as well. This thesis studies the following research problems: - Study of generic regression test suites with respect to execution time- Design and implementation of combinatorial testing based test suites for Contiki operating system and its simulator Cooja- Measuring the effectiveness of designed test suites using the traditional coverage techniques like code coverage- Automation of test scripts generation from combinatorial testing design model and analyzing coverage. Further refinement of the combinatorial testing design model for Contiki and Cooja till the desired results are achieved.- Propose an integrated test environment for combinatorial testing- Enhancement of test prioritization algorithm viz. Residual test coverage algorithm taking execution time and code coverage as parameters.

Communication Protocol Engineering Miroslav Popovic, 2018-10-03 As embedded systems become more and more complex, so does the challenge of enabling fast and efficient communication between the various subsystems that make up a modern embedded system. Facing this challenge from a practical standpoint, Communication Protocol Engineering outlines a hands-on methodology for developing effective communication protocols for large-scale systems. A Complete Roadmap This book brings together the leading methods and techniques developed from state-of-the-art methodologies for protocol engineering, from specification and description methods to cleanroom engineering and agile methods. Popovic leads you from conceptualization of requirements to analysis, design, implementation, testing, and verification. He covers the four main design languages: specifications and description language (SDL); message sequence charts (MSCs); tree and tabular combined notation (TTCN); and unified modeling language (UML). Practical Tools for Real Skills Fully illustrated with more than 150 figures, this guide also serves as a finite state machine (FSM) library programmer's reference manual. The author demonstrates how to build an

FSM library, explains the components of such a library, and applies the principles to FSM library-based examples. Nowhere else are the fundamental principles of communication protocols so clearly and effectively applied to real systems development than in Communication Protocol Engineering. No matter in what stage of the process you find yourself, this is the ideal tool to make your systems successful.

Model-Based Testing for Embedded Systems Justyna Zander, Ina Schieferdecker, Pieter J. Mosterman, 2017-12-19 What the experts have to say about Model-Based Testing for Embedded Systems: This book is exactly what is needed at the exact right time in this fast-growing area. From its beginnings over 10 years ago of deriving tests from UML statecharts, model-based testing has matured into a topic with both breadth and depth. Testing embedded systems is a natural application of MBT, and this book hits the nail exactly on the head. Numerous topics are presented clearly, thoroughly, and concisely in this cutting-edge book. The authors are world-class leading experts in this area and teach us well-used and validated techniques, along with new ideas for solving hard problems. It is rare that a book can take recent research advances and present them in a form ready for practical use, but this book accomplishes that and more. I am anxious to recommend this in my consulting and to teach a new class to my students. —Dr. Jeff Offutt, professor of software engineering, George Mason University, Fairfax, Virginia, USA This handbook is the best resource I am aware of on the automated testing of embedded systems. It is thorough, comprehensive, and authoritative. It covers all important technical and scientific aspects but also provides highly interesting insights into the state of practice of model-based testing for embedded systems. —Dr. Lionel C. Briand, IEEE Fellow, Simula Research Laboratory, Lysaker, Norway, and professor at the University of Oslo, Norway As model-based testing is entering the mainstream, such a comprehensive and intelligible book is a must-read for anyone looking for more information about improved testing methods for embedded systems. Illustrated with numerous aspects of these techniques from many contributors, it gives a clear picture of what the state of the art is today. —Dr. Bruno Legeard, CTO of Smartesting, professor of Software Engineering at the University of Franche-Comté, Besançon, France, and co-author of Practical Model-Based Testing

Cooperative Design, Visualization, and Engineering Yuhua Luo, 2009-09-19 The 6th International Conference on Cooperative Design, Visualization and Engineering CDVE 2009 was held in central Europe - Luxembourg. Participants from 7 continents came together to celebrate this annual event. The papers published in the conference in this volume reflect the new progress in the following aspect. Research in developing cooperative applications is currently focusing on two directions. One is the cooperation in the software development process and the other is the variety of the targeted cooperative software products. Many papers address how to facilitate cooperation in the software engineering process particularly global software engineering. The importance of sharing information in cooperation is emphasized by the authors. For example, papers that addressed the development of sharing mental models, tools for easily shared projects, sharing links for cross-media information spaces, sharing resources and transfer of knowledge among team members etc. have attracted special attention. Many papers presented in this volume are the research results of tackling problems in developing a great variety of cooperative software products. The targeted systems are cooperative support for music creation, cooperative process management systems, cooperative visualization systems for geographic information, cooperative cultural information sharing platforms, cooperative reasoning systems, cooperative sensor networks for environment

monitoring, remote cooperative video vehicle monitoring systems etc. Another aspect of the papers in this volume is dealing with the problems in earlier phases in the cooperative product production life cycle. The topics addressed range from partner selection for co-operation at the beginning, requirement gathering, requirement negotiation, to cooperative design, production to cooperative testing, and finally to cooperative system operation.
