How to Build an SMS Service Jordan Schwartz, Brian Retford, 2007-06-21 The simple text message application that appears on virtually all mobile phones is the ultimate thin client, allowing your users access to the full computing power and informational depth of the Internet from a cheap cell phone on a mountaintop. Building an SMS service can be quite simple. This tutorial guides you through a variety of implementations, giving you the information you need to choose one that best fits your unique needs and circumstances. More than that, though, it seeks to help you understand the core principles necessary to make your service a success.

Txtng: The Gr8 Db8 David Crystal, 2009-07-09 This book takes a long hard look at the text-messaging phenomenon and its effects on literacy, language,

and society. Young people who seem to spend much of their time texting sometimes appear unable or unwilling to write much else. Media outrage has ensued. It is bleak, bald, sad shorthand, writes a commentator in the UK Guardian. It masks dyslexia, poor spelling, and mental laziness. Exam answers using textese and reports that examiners find them acceptable have led to headlines in the tabloids and leaders in the qualities. Do young people text as much as people think? Do adults? Does texting spell the end of literacy? Is there a panic in the media? David Crystal looks at the evidence. He investigates how texting began and who uses it, why and what for. He shows how to interpret its mix of pictograms, logograms, abbreviations, symbols, and wordplay, and how it works in different languages. He explores the ways similar devices have been used in different eras and discovers that the texting system of conveying sounds and meaning goes back a long way, all the way in fact to the origins of writing - and he concludes that far from hindering literacy, texting may turn out to help it. Mobile Technology and the Transformation of Public Alert and Warning

Hamilton Bean, 2019-10-01 This timely book provides the inside story of the development of mobile public alert and warning technology in the United States and addresses similar systems being used in Australia, Canada, Japan, and the Netherlands. This book provides a comprehensive account of how mobile-smartphone systems are transforming the practice of public alert and warning in the United States. Recent events have vaulted mobile alert and

warning technology to the forefront of public debates concerning the hazards of the digital age. False alarms of ballistic missile attacks on Hawaii and Japan, the non-use of mobile alerts during the Northern California wildfires, and the role this technology plays in supporting police manhunts and counterterrorism efforts have prompted reconsideration of how these systems are used. Drawing upon interviews with officials, executives, experts, and citizens, the book provides an in-depth analysis of the events and contexts influencing the trajectory of mobile public alert and warning and charts a course for its improvement. The book first introduces readers to the high stakes involved in the transformation of public alert and warning, explaining how new research is revealing the benefits, limitations, and risks of mobile technology in the disaster communication context. Three case studies then illustrate issues of risk, trust, and appropriateness in mobile public alert and warning.

Emergency Notification Robert C. Chandler, 2010-09-21 This text provides critical information to help organizations improve their emergency communications, including the tools, automation technology, and processes of crisis notification. To grasp the importance of emergency notification, imagine this scenario: A shooter is on the loose at a college campus. Chaos reigns. To contain the situation, campus personnel need to communicate immediately and efficiently, not only with the students, faculty, and staff, but also the local police, federal law enforcement, and media. Effective

emergency notification makes things right, it allows the right message to reach the right people at the right time—facilitating the right response. Emergency Notification explains how. This book offers must-know information for business security, senior management, human resources staff, government policymakers, and emergency planners, examining what, when, how, why, and with whom to communicate during crises. This text also covers risk communication, message mapping, information loading, audience comprehension, and practical issues like testing emergency notification systems.

Geotargeted Alerts and Warnings National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Geotargeted Disaster Alerts and Warnings: A Workshop on Current Knowledge and Research Gaps, 2013-09-19 Geotargeted Alerts and Warnings: Report of a Workshop on Current Knowledge and Research Gaps is the summary of a February, 2013 workshop convened by the Computer Science and Telecommunications Board of the National Research Council to examine precise geotargeting of public alerts and warnings using social media. The workshop brought together social science researchers, technologists, emergency

management professionals, and other experts to explore what is known about how the public responds to geotargeted alerts and warnings, technologies and techniques for enhancing the geotargeting of alerts and warnings, and open research questions about how to effectively use geotargeted alerts and warnings and technology gaps. This report considers the potential for more precise geographical targeting to improve the effectiveness of disaster alerts and warnings; examines the opportunities presented by current and emerging technologies to create, deliver, and display alerts and warnings with greater geographical precision; considers the circumstances where more granular targeting would be useful; and examines the potential roles of federal, state, and local agencies and private sector information and communications providers in delivering more targeted alerts.

Twitter Guide: For Seniors Jacob Gleam, 2015-05-21 Twitter is one of the many social media platforms that people use to communicate ideas, jokes and other types of information. The information is displayed in what are known as tweets which usually allow the twitter users a 140 character limit to share anything. Twitter is used globally and can be used for business, personal use and for group communications. The site is a fun way to interact with others and it differs from other platforms in that the user gets to read the content in a short period and decide whether he or she would like to open any links found on the tweet to read it further.
