Encryption and Decryption Algorithms for Plain Text and Images using Fractional Calculus Rafael Martínez-Guerra, Juan Javier Montesinos-García, Juan Pablo Flores-Flores, 2023-01-17 This book offers an alternative for encrypting and decrypting messages using objects called integer and fractional-order estimators or observers, by means of security codes. The authors first establish the class of observers capable of carrying out this work. Then, the type of observers to treat either the integer or fractional order type and their main characteristics is mentioned. The book also presents an essential property of some systems such as Liouville, which is vital for the encryption and decryption of messages in integer and fractional order nonlinear systems by using the synchronization property of chaotic systems. Finally, it addresses some logistic maps such as Mandelbrot sets including Julia and fractal sets, taking advantage of their characteristics to encrypt or recover messages.

Implementing the IBM System Storage SAN32B-E4 Encryption Switch Jon Tate, Uwe Dubberke, Michael Engelbrecht, IBM Redbooks, 2011-03-07 This IBM® Redbooks® publication covers the IBM System Storage® SAN32B-E4 Encryption Switch, which is a high-performance stand-alone device designed to protect data-at-rest in mission-critical environments. In addition to helping IT organizations achieve compliance with regulatory mandates and meeting industry standards for data confidentiality, the SAN32B-E4 Encryption Switch also protects them against potential litigation and liability following a reported breach. Data is one of the most highly valued resources in a competitive business environment. Protecting that data, controlling access to it, and verifying its authenticity while maintaining its availability are priorities in our security-conscious world. Increasing regulatory requirements also drive the need for adequate data security. Encryption is a powerful and widely used technology that helps protect data from loss and inadvertent or deliberate compromise. In the context of data center fabric security, IBM provides advanced encryption services for Storage Area Networks (SANs) with the IBM System Storage SAN32B-E4 Encryption Switch. The switch is a high-speed, highly reliable hardware device that delivers fabric-based encryption services to protect data assets either selectively or on a comprehensive basis. The 8 Gbps SAN32B-E4 Fibre Channel Encryption Switch scales nondisruptively, providing from 48 up to 96 Gbps of encryption processing power to meet the needs of the most demanding environments with flexible, on-demand performance. It also provides compression services at speeds up to 48 Gbps for tape storage systems. Moreover, it is tightly integrated with one of the industry-leading, enterprise-class key management systems, the IBM Tivoli® Key Lifecycle Manager (TKLM), which can scale to support key life-cycle services across distributed environments.

IBM System i Security: Protecting i5/OS Data with Encryption Yessong Johng, Beth Hagemeister, John Concini, Milan Kalabis, Robin Tatam, IBM Redbooks, 2008-07-24 Regulatory and industry-specific requirements, such as SOX, Visa PCI, HIPAA, and so on, require that sensitive data must be stored securely and protected against unauthorized access or modifications. Several of the requirements state that data must be encrypted. IBM® i5/OS® offers several options that allow customers to encrypt data in the database tables. However, encryption is not a trivial task. Careful planning is essential for successful implementation of data encryption project. In the worst case, you would not be able to retrieve clear text information from encrypted data. This IBM Redbooks® publication is designed to help planners, implementers, and programmers by providing three key pieces of information: Part 1, Introduction to data encryption on page 1, introduces key concepts, terminology, algorithms, and key management. Understanding these is important to follow the rest of the book. If you are already familiar with the general concepts of cryptography and the data encryption aspect of it, you may skip this part. Part 2, Planning for data encryption on page 37, provides critical information for planning a data encryption project on i5/OS. Part 3, Implementation of data encryption on page 113, provides various implementation scenarios with a step-by-step guide.
