The study of the Middle East and the broader Islamic world has been no less impacted by this new paradigm. Scholars are making daily use of digital tools and repositories including private and state-sponsored archives of textual sources, digitized manuscript collections, densitometrical imaging, visualization and modeling software, and various forms of data mining and analysis. This collection of essays explores the state of the art in digital scholarship pertaining to Islamic & Middle Eastern studies, addressing areas such as digitization, visualization, text mining, databases, mapping, and e-publication. Handbook of SAS® DATA Step Programming Arthur Li,2013-04-10 To write an accomplished program in the DATA step of SAS®, programmers must understand programming logic and know how to implement and even create their own programming algorithm. Handbook of SAS® DATA Step Programming shows readers how best to manage and manipulate data by using the DATA step. The book helps novices avoid common mistakes resulting from a lack of understanding fundamental and unique SAS programming concepts. It explains that learning syntax does not solve all problems; rather, a thorough comprehension of SAS processing is needed for successful programming. The author also guides readers through a programming task. In most of the examples, the author first presents strategies and steps for solving the problem, then offers a solution, and finally gives a more detailed explanation of the solution. Understanding the DATA steps, particularly the program data vector (PDV), is critical to proper data manipulation and management in SAS. This book helps SAS programmers thoroughly grasp the concept of DATA step processing and write accurate programs in the DATA step. Numerous supporting materials, including data sets and programs used in the text, are available on the book's CRC Press web page.
