**Climate Change and the Art of Devotion** Sugata Ray,2019-07-31 In the enchanted world of Braj, the primary pilgrimage center in north India for worshippers of Krishna, each stone, river, and tree is considered sacred. In *Climate Change and the Art of Devotion*, Sugata Ray shows how this place-centered theology emerged in the wake of the Little Ice Age (ca. 1550–1850), an epoch marked by climatic catastrophes across the globe. Using the frame of geoaesthetics, he compares early modern conceptions of the environment and current assumptions about nature and culture. A groundbreaking contribution to the emerging field of eco-art history, the book examines architecture, paintings, photography, and prints created in Braj alongside theological treatises and devotional poetry to foreground seepages between the natural ecosystem and cultural production. The paintings of deified rivers, temples that emulate fragrant groves, and talismanic bleeding rocks that Ray discusses will captivate readers interested in environmental humanities and South Asian art history. **Manufacturing Simulation with Plant Simulation and Simtalk** Steffen Bangsow, 2010-03-29 Based on the competition of international production networks, the pressure to - crease the efficiency of production systems has increased significantly. In ad- tion, the number of technical components in many products and as a consequence also the requirements for corresponding assembly processes and logistics pr- esses increases. International logistics networks require corresponding logistics concepts. These requirements can be managed only by using appropriate Digital Factory tools in the context of a product lifecycle management environment, which allows reusing data, supports an effective cooperation between different departments, and provides up-to-date and relevant data to every user who needs it. Simulating the complete material flow including all relevant production, st- age, and transport activities is recognized as a key component of the Digital F- tory in the industry and as of today widely used and accepted. Cutting inventory and throughput time by 20-60% and enhancing the productivity of existing p- duction facilities by 15-20% can be achieved in real-life projects.
