Kindling The Fire Within Janice Buchanan Culley,2011-04-11 What dimension do you think in? What reality are you creating for yourself? Do you know what you are creating is affecting our current reality? It affects your personal life Your marital relationship Your family structure Yes! Even our current economic situation! How and what we are thinking and feeling is affecting our planet! Where do you place your focus to solve the crisis we are in? Are you oblivious? Are you a dooms-dayer? Do you see through rose-colored glasses? What reality do you want to create? The reality is we can have a baptism of fire and transcend a burning by fire! It's us who determine the degree of suffering we experience. Become aware, learn how to align with universal laws and to clear what we are attracting, then you'll transcend through the dimensional levels of reality, and transform not only yourself, but the current situation we are facing. Pray for a miracle—a complete healing of the planet—a baptism of fire! Then take action. We get what we pray for. It's never too late until it is!

Color and Light James Gurney,2010-11-30 Unlike many other art books only give recipes for mixing colors or describe step-by-step painting techniques, *Color and Light* answers the questions that realist painters continually ask, such as: What happens with sky colors at sunset?, How do colors change with distance?, and What makes a form look three-dimensional? Author James Gurney draws on his experience as a plain-air painter and science illustrator to share a wealth of information about the realist painter's most fundamental tools: color and light. He bridges the gap between abstract theory and practical knowledge for traditional and digital artists of all levels of experience.

Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.
