The Amme Talks Ulf Stolterfoht, 2018-05-22 The Amme Talks is a conversation between poet and machine. In 2003, poet Ulf Stolterfoht and a chatbot named Amme (which means wet nurse in German) met in Berlin. For one week, Stolterfoht interrogated Amme: not just a chatbot, actually, but a steel-and-glass construction with a computer interface, which is connected to a glass of milk, a robotic arm that tips over the glass, and a tube that releases water, as if urinating. Stolterfoht asked Amme--the creation of artist Peter Dittmer--about the nature of authorship and the agency of language; he intended to turn the answers into an essay on poetics. While Amme replied to every question, Stolterfoht observed that the output was highly self-reflexive, if not entirely self-referential, and impossible for him to assimilate into his writing. He'd hoped to glean something from Amme's performance of an idiosyncratic and mechanical form of human speech. Instead, he stumbled on a remarkable second-order realism in which words refer not to things but to themselves. In the dialogue presented in this book, Stolterfoht glimpses something other than what we understand as poetry, something apart from solipsistic exercises with language, something like endlessly liberated speech--A potential revolution in poetry mounted by a milk-spilling chatbot.

Conversational Marketing David Cancel, Dave Gerhardt, 2019-01-30 Real-time conversations turn leads into customers Conversational Marketing is the definitive guide to generating better leads and closing more sales. Traditional sales and marketing methods have failed to keep pace with the way modern, internet-savvy consumers purchase goods and services. Modern messaging apps, which allow for real-time conversations and instant feedback, have transformed the way we interact in our personal and professional lives, yet most businesses still rely on 20th century technology to communicate with 21st century customers. Online forms, email inquiries, and follow-up sales calls don't provide the immediacy that modern consumers expect. Conversational marketing and sales are part of a new methodology centered around real-time, one-on-one conversations with customers via chatbots and messaging. By allowing your business to communicate with customers in real time—when it's most convenient for them—conversational marketing improves the customer experience, generates more leads, and helps you convert more leads into customers. Conversational Marketing pioneers David Cancel and Dave Gerhardt explain how to: Merge inbound and outbound tactics into a more productive dialog with customers Integrate conversational marketing techniques into your existing sales and marketing workflow Face-to-face meetings, phone calls, and email exchanges remain important to customer relations, but adding a layer of immediate, individual conversation drives the customer experience—and sales—sky-high.

Developing Enterprise Chatbots Boris Galitsky, 2019-04-04 A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable, which makes it one of the most complex intelligent systems being designed nowadays. Designers have to learn to combine intuitive, explainable language understanding and reasoning approaches with high-performance statistical and deep learning technologies. Today, there are two popular paradigms for chatbot construction: 1. Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise, not being an expert, can populate it with training data; 2. Accumulate a huge set of training dialogue data, feed it to a deep learning network and expect the trained chatbot to automatically learn "how to chat". Although these two approaches are reported to imitate some intelligent dialogues, both of them are unsuitable for enterprise chatbots, being unreliable and too brittle. The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms. Enterprise high-performance chatbots with extensive domain knowledge require a mix of statistical, inductive, deep machine learning and learning from the web, syntactic, semantic and discourse NLP, ontology-based reasoning and a state machine to control a dialogue. This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning. The foci of this book are applications of discourse analysis in text relevant assessment, dialogue management and content generation, which help to overcome the limitations of platform-based and data driven-based approaches.
